

PSYCHOLOGY

Stage 3

WACE Examination 2013

Marking Key

Marking keys are an explicit statement about what the examiner expects of candidates when they respond to a question. They are essential to fair assessment because their proper construction underpins reliability and validity.

Section One: Research methods

20% (20 Marks)

Question 1

(12 marks)

- (a) Describe briefly the central tendency in the two sets of scores.

(1 mark)

Description	Marks
Correct response must describe the mean and/or other measures of central tendency (mode, median). Example of correct responses: The mean score for both schools indicates that the 'average' number of days per week that the adolescents participated in sport was 2. The mean/average number of days that adolescents participated in sport was 2, but the most frequent/mode was 2 for School A and 1 for School B. For School A the mean, mode and median is 2 but for School B the mean is 2, mode is 1, and median is 1. Note: "The mean is 2 (for both schools)" is not acceptable for one mark. Candidates must "briefly describe".	0–1
Total	1

- (b) Explain, using the data in Table 1, why it is important to consider a measure of dispersion as well as a measure of central tendency in scores. (2 marks)

Description	Marks
Any correct response acceptable for 2 marks	0–2
Example of 2 mark response: Whilst the mean score for both schools is the same, the different standard deviations indicate that the distribution/spread of scores in the two schools is quite different.	
Example of 1 mark response: - The mean score for both schools is the same but the standard deviations are different. - Generic description of the difference between dispersion and central tendency, without referring to data.	
Total	2

- (c) (i) Explain the difference between the terms 'population' and 'sample' in psychological research. (2 marks)

Description	Marks
Example of 2 mark response (describes meaning of 'population' and 'sample' and explicitly explains the difference between them)	0–2
The population represents the entire group of interest, whereas a sample is a subgroup/subset/small group from the population (that is studied in research)	
Example of 1 mark response A sample is a subset of the population (doesn't define 'population') The population is a group of people from which a sample can be selected (doesn't define 'sample')	
Note: definition of 'population' as in the people who live in a country is not accepted as a psychological definition	2
Total	

- (ii) State whether or not the results of the study described in Question 1 are likely to represent the population of 17-year-old adolescents. Outline **one** reason for your answer. (2 marks)

Description	Marks
No (the results are not likely to be representative of the population) (1 mark) Any correct reason acceptable for one mark Examples of correct reasons: • because of the small size of the sample • because the sample is biased because it is made up of volunteers • because there was no attempt to select a random sample • because we do not know the distribution of females/males	0–2
Total	2

- (iii) Outline **one** way in which researchers can ensure that their samples are representative of the population. (1 mark)

Description	Marks
Any correct response acceptable for one mark: Examples of correct responses: • randomly select participants from the population • select participants from the population to represent different subgroups/represent the characteristics of the sample (stratifying the sample) • use a larger sample/increase size of sample	0–1
Total	1

- (d) Identify whether the study described in Question 1 is an experimental or non-experimental study. Explain briefly the reason for your answer. (2 marks)

Description	Marks
Non-experimental study (1 mark) Examples of correct explanations (1 mark) • because the researchers are not manipulating any variables • because the researchers are (just) collecting information about people's actual behaviour	0–2
Total	2

- (e) (i) Give **one** limitation to the reliability of the data collected in this study. (1 mark)

Description	Marks
Examples of correct responses: General idea – reliance on memory from the past week; e.g., The data comes from people's memory of activities in the last week. Participants have to remember how many days in the previous week they participated in sporting activities. General idea – social desirability; e.g., People might report higher (or lower) numbers of sporting activities due to social desirability General idea – reliance on self-report rather than objective data; e.g., the data is reported by the participants rather than being objective General idea – data sampled over one week only Note: Responses that refer to limited sample size or unequal sample sizes not to be awarded marks.	0–1
Total	1

- (ii) State **one** way in which the researchers could increase the reliability of the data collected in the study. (1 mark)

Description	Marks
Examples of correct responses: - ask people to keep a diary of/write down the activities that they participate in each day - collect the information about the current week, not rely on memory of the previous week - collect data over a longer period of time Note: Increasing sample size is not an example of a correct response.	0–1
Total	1

Question 2

(8 marks)

A psychologist wants to investigate students' attitudes toward fast food advertising on television.

- (a) (i) Name **two** qualitative methods the psychologist could use to collect data. (2 marks)

Description	Marks
1 mark for each correct response. Correct responses may include:	
• interview • focus group • survey • questionnaire • open-ended questions	0–2
Total	2

- (ii) Name **one** quantitative method the psychologist could use to collect data. (1 mark)

Description	Marks
Any correct response accepted for one mark. Correct responses may include:	
• rating scale • Likert scale • checklist • survey • questionnaire	0–1
Note: Observation or physiological measures not acceptable response for investigating attitudes.	
Total	1

- (b) (i) Outline **two** benefits of using qualitative methods for collecting research data. (2 marks)

Description	Marks
Any correct response accepted for one mark each. Examples of correct responses:	
• provides rich/detailed information • provides flexibility for individuals to explain their views	0–2
Total	2

- (ii) Outline **two** limitations of using qualitative methods for collecting research data. (2 marks).

Description	Marks
Any correct response accepted for one mark each.	
Examples of correct responses:	
- time consuming (to collect data) - time consuming (to collate/analyse data) - difficult to compare the responses of different individuals/groups - can not analyse statistically - the researcher has to decide what are the major points being made and organise the information to report on it - can not generalise to the population - responses might be affected by social desirability - expensive (time and/or money)	0–2
Total	2

- (c) State **one** way in which the role of the experimenter is different in qualitative research compared with quantitative research. (1 mark)

Description	Marks
Any correct response accepted for one mark each.	
Examples of correct responses:	
- in quantitative research the researcher is independent/external to the process - in qualitative research the researchers is more actively involved - in qualitative research the experimenter can influence the way in which the participant answers the question - in qualitative research the experimenter can bias the results by the way they ask the questions - in qualitative research the experimenter has much more freedom around how the results are analysed - in qualitative research the experimenter has more freedom around how the results are interpreted / interpretation of the results is very subjective	0–1
Total	1

Section Two: Short answer

55% (55 Marks)

Question 3

(12 marks)

- (a) Give **one** example of each of the following methods of investigating brain function. (3 marks)

Description	Marks
External recording: EEG	1
Still picture scan: CAT, MRI	1
Dynamic picture scan: fMRI, PET	1
Total	3

- (b) List **two** functions that are controlled by the

- (i) somatic nervous system. (2 marks)

Description	Marks
Any correct response accepted for one mark each. Examples of correct responses – any function related to carrying sensory and motor information both to and from the central nervous system including, but not limited to, voluntary muscle movement, processing sensory information including touch, sight, hearing	0–2
Total	2

- (ii) autonomic nervous system. (2 marks)

Description	Marks
Any correct response accepted for one mark each. Correct responses include, but are not limited to: • breathing/respiration • digestion • blood pressure • sweating • heart rate Note: The term 'reflex' on its own is not acceptable for a mark in either parts (i) or (ii). A specific example of a reflex should be considered for accuracy.	0–2
Total	2

- (c) A person is sitting inside a quiet house watching television when suddenly there is a loud noise outside.

- (i) Name **three** symptoms produced by the autonomic nervous system that the person might experience. (3 marks)

Description	Marks
Any symptom of the 'flight or fight' response are acceptable for one mark each. Examples of correct responses include, but are not limited to:	0–3
• increased heart rate/pounding heart	
• increased breathing rate/faster breathing	
• dry mouth	
• sweaty palms	
Total	3

- (ii) Name the division of the autonomic nervous system that is responsible for producing these symptoms. (1 mark)

Description	Marks
Sympathetic nervous system	0–1
Total	1

- (iii) Name the division of the autonomic nervous system that is responsible for reducing these symptoms. (1 mark)

Description	Marks
Parasympathetic nervous system	0–1
Total	1

Question 4**(8 marks)**

- (a) Madeleine was reading a book and had habituated to the sound of the clock ticking in the room.

- (i) Define 'habituation'. (1 mark)

Description	Marks
Examples of correct definitions (wording does not have to be exact but response must accurately convey correct meaning): "Learning not to respond to events or activities that occur repeatedly or do not grab our attention" (Fletcher & Garton, 2007, p. 494). "Adjust(ing) our attention levels to ignore a repetitive stimulus" (Fletcher & Garton, 2007, p. 417) "When predictable and unchanging stimuli fail to command attention" (Fletcher & Garton, 2007, p. 417) "The decreasing strength of a response after repeated presentations of the stimulus" (Burton, Weston, & Kowalski, 2012. p. G-9)	0–1
Total	1

- (ii) Define 'dishabituation'. (1 mark)

Description	Marks
Any example that indicates a change in the stimulus or its intensity to be awarded one mark. Examples of correct responses: "when a change in the stimulation is so intense that it causes us to pay attention" (Fletcher & Garton, 2007, p. 417) "a change in events or activities that causes us to become aware of them" (Fletcher & Garton, 2007, p. 493)	0–1
Total	1

- (b) Christopher is studying in the library and does not notice his friend come in and sit at the desk next to him.
- (i) Identity whether this is an example of selective attention or divided attention. (1 mark)
- (ii) Outline briefly the reason for your answer to part (b) (i). (1 mark)

Description	Marks
(i) Selective attention	0–1
(ii) Because the student is focusing/paying attention to one thing in their environment to the exclusion of others / and not paying attention to something else	0–1
Note: The response must demonstrate the students' understanding of selective attention and should not use the word "selective/selectively" solely to explain their answer	
Total	2

- (c) Sensation and perception are both involved in converting information about the world into a psychological experience. Psychological research tells us that there is not a direct correspondence between physical reality and psychological reality.
- (i) Use the visual illusion shown in Figure 1 to explain how perception is an active process. (2 marks)

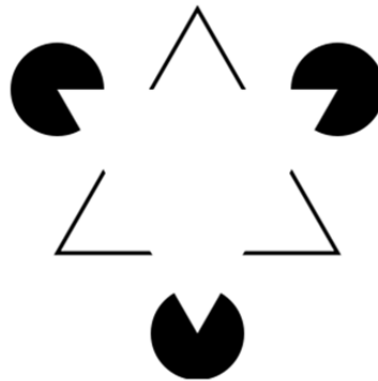

Figure 1: Kanizsa triangle illusion

Description	Marks
- In this illusion people usually report seeing two overlapping triangles, however there are actually no triangles printed (1 mark) - This shows us that people are actively involved in creating meaning from stimuli/interpreting stimuli rather than just sensing the physical reality (1 mark)	0–2
Total	2

- (ii) Are visual illusions the same in all cultures? Explain the reason for your answer by referring to research on the Muller-Lyer illusion (shown in Figure 2). (2 marks)

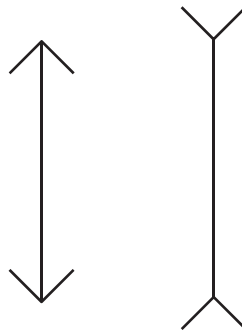

Figure 2: Muller-Lyer illusion

Description	Marks
• No (visual illusions are not the same in all cultures)	0–1
• Research has found that people from Western countries are more likely to experience the Muller-Lyer illusion than people from non-Western countries (which may be because of differences in architecture). • Perception of visual illusions differ based on past experiences / perceptual expectancies / the persons environment.	0–1
Total	2

Question 5

(11 marks)

For copyright reasons this image cannot be reproduced in the online version of this document but may be viewed at
<http://britlit19.blogspot.com.au/2012/04/theory-of-personality-analyzing.html>

Figure 3: Iceberg model of Freud's theory of personality.

- (a) Name the **three** parts of the personality in Freud's psychodynamic theory indicated by (i), (ii), and (iii) in Figure 3. (3 marks)

Description	Marks
1 mark for each correct name (i) Ego (ii) Id (iii) Superego	0–3
Total	3

- (b) Describe briefly the function of each part of the personality named in part (a).

Description	Marks
1 mark for each correct description of function Examples of correct descriptions: (i) Ego - function is to meet the needs of the individual in the real world in an acceptable manner / to protect the individual and assist to cope in the real world (ii) Id - function is immediate reduction of tension produced by drives / instant gratification of primitive urges / needs (iii) Superego - function is to guide the individual to behave in a morally accepted manner / act as the 'conscience' of the individual	0–3
Total	3

- (c) Name **two** techniques that Freud used to study unconscious processes in his patients. (2 marks)

Description	Marks
1 mark for each correct response Free association Dream analysis Examples of 0 mark responses: • Freudian slips • observation • case studies • psychodynamic therapy • hypnosis	0–2
Total	2

- (d) Explain how, according to Freud's theory of personality, adult personality can be related to development in childhood. Illustrate your answer with an example from **one** of Freud's psychosexual stages of development. (3 marks)

Description	Marks
Explanation – 2 marks for a correct, elaborated explanation. 1 mark for a correct but unelaborated explanation Example of 2 mark response: According to Freud's theory, children progress through a series of stages of development and must resolve issues at each stage. If the child does not have their needs met and resolve the issues of a particular stage, they may become 'fixated'/'stuck' in that stage and this can be shown in their later behaviour. Example of one mark response: Freud believed that children could get 'stuck'/'fixated' in one stage of development	0–2
Example – up to 1 mark for a correct example – must correctly identify one of the stages from Freud's theory and provide an appropriate example E.g. fixation at oral stage might mean the person has a need for oral stimulation, such as through excessive eating or smoking, thumb sucking or nail biting, or uses a lot of sarcasm E.g. fixation at anal stage might mean a person has a high need for control, orderliness, or neatness in their life, or be messy or late.	0–1
Total	3

Question 6

(8 marks)

- (a) Describe briefly the main contribution to social psychology made by Floyd Allport. (2 marks)

Description	Marks
Any correct response accepted.	0–2
Examples of 2 mark responses (referring to overall approach to the study of social psychology):	
• he wrote about the need for social psychology to be studied scientifically • scientific study of social psychology using a behaviourist approach • introduction of experimental methods to the study of social psychology	
Or any specific example for 1 mark each, e.g.,	
• Published a textbook on social psychology • Introduced ideas (such as) social conformity / facial expression of emotions / influence of an audience on individual behaviour	
Total	2

- (b) (i) Lin and Maya both smoke cigarettes for the first time. Lin believes that smoking cigarettes is 'fun'. Maya believes that smoking cigarettes is 'unhealthy'. Which student will experience the greater cognitive dissonance? Provide a brief reason for your answer. (2 marks)

Description	Marks
Maya (will experience the greater cognitive dissonance) (1 mark)	0–1
Any correct explanation of cognitive dissonance theory acceptable for one mark, for example:	0–1
• because her behaviour of smoking a cigarette is inconsistent with her belief that smoking is unhealthy (1 mark) • because her behaviour is not consistent with her attitude (about smoking) (1 mark)	
Total	2

- (ii) Explain, using cognitive dissonance theory, why a person who is paid \$5 to complete a very boring task might rate the task as more interesting than someone who is paid \$100. (4 marks)

Description	Marks
Any correct response acceptable. Example of correct response for one mark each: • Correct explanation of cognitive dissonance theory (1 mark) • The person who was paid \$100 could use the payment to explain their behaviour of completing the boring task so would not experience cognitive dissonance and would rate the task as boring (1 mark). • The person who was paid only \$5 would be less likely to be able to justify doing the task due to the payment and would experience cognitive dissonance (1 mark). • To reduce this cognitive dissonance, the person would be likely to rate the task as more interesting (1 mark).	0–4
Total	4

Question 7

(8 marks)

- (a) Outline **two** features of the 'restricted code' of language identified by Bernstein. (2 marks)

Description	Marks
Any correct responses accepted for one mark each. Examples of correct responses - informal - short, simple sentences - much information conveyed non-verbally - much information only makes sense if the context is known - few descriptive words are used - commands are used to gain compliance - the 'here and now' is emphasised - abstract ideas are rarely expressed (from Fletcher & Garton, 2007, p. 376)	0–2
Total	2

- (b) What is the difference between Bernstein's view of the 'restricted code' and Labov's view of 'Black English Vernacular'? (2 marks)

Description	Marks
For two marks, response must explicitly address the difference by referring to both theorists. 1 mark for a basic, correct response that refers to only one theorist 2 marks for an elaborated correct response that refers to both theorists Example of a one mark response - Bernstein thought that people who used the restricted code had a language deficit - Labov thought that Black English Vernacular should be seen as a different form of language, rather than a language deficiency Example of a two mark response - Bernstein thought that people who used the restricted code had a language deficit however Labov thought that Black English Vernacular (was just as complex and rule-governed and) should be seen as a different form of language, rather than a language deficiency	0–2
Total	2

- (c) Name and describe briefly the gender difference in communication identified by Tannen. (4 marks)

Description	Marks
1 mark each for correct name 1 mark each for correct description Men use 'Report talk' (1 mark) which is based on gaining and holding the attention of the audience and gaining status. (1 mark) Women use 'Rapport talk' (1 mark) which is focused on establishing and maintaining personal relationships. (1 mark)	0–4
Total	4

Question 8

(8 marks)

- (a) Name and explain briefly **three** types of attachment behaviour as proposed by Ainsworth from her study of infants in the Strange Situation. (6 marks)

Description	Marks
1 mark each for correct name (may be Type or descriptive name) 1 mark each for corresponding correct description (any correct description acceptable) A/Type A/Anxious-avoidant attachment Infants show their insecurity by ignoring their mother / not looking at their mother/not trying to be close to their mother B/Type B/Secure attachment Infants use their mother as a secure base to explore from C/Type C/Anxious-resistant attachment Infants show their insecurity by clinging to their mother but also pushing her away D/Type D/Disorganised Infants show a mix of behaviours, maybe appearing dazed, confused, scared, frozen etc. (Types A–C From Fletcher & Garton, 2007, p. 386)	0–6
Total	6

- (b) Are there cultural differences in attachment? Refer to **one** example of psychological research to support your response. (2 marks)

Description	Marks
Any well-justified; correct response acceptable. Examples of correct responses: Research by Van Ijzendoorn and Kroonberg (1988) found evidence of (all) three of Ainsworth's attachment types in samples from eight countries and found that differences within cultures were greater than differences within cultures. Research by Van Ijzendoorn and Kroonberg (1988) found some differences between cultures in the proportion of different attachment types. Type B Secure attachment was found to be the most common type in all countries, but Type A was relatively more common in Western European countries and Type C relatively more common in Japan and Israel. A study by Sagi and colleagues (1994) found that children raised in traditional kibbutzim, where they live in an 'infant house' from the age of six weeks and are cared for by professional carers, showed higher levels of anxious-avoidant attachment compared to children raised in home-based kibbutzim. (evidence from Fletcher & Garton, 2007, p. 386) Note: • No marks will be awarded for a one word (yes/no) response. • Researchers names included for citation purposes and are not required for full marks.	0–2
Total	2

Section Three: Extended answer

25% (40 Marks)

Question 9

(20 marks)

You are a psychologist who has been asked to design a program to promote the psychological wellbeing of young people. After reading the psychological evidence you decide that the program will be based on exercise and will be called 'Healthy body, healthy mind'. You must now write about the psychological evidence that shows that exercise is not only good for the body but also good for the mind, in order to convince your manager to provide the funding for the program.

In your answer you should

- provide an introduction that gives an overview of why the program will be based on exercise.
- give **three** specific examples of the benefits of exercise on psychological wellbeing.
- refer to psychological evidence relevant to each example.

Question 9 Marking Key		MARKS
Introduction		2
Detailed introduction		2
Basic, unelaborated introduction		1
No introduction		0
For each of the three examples		5×3 = 15
Detailed description of one or more examples of relevant psychological research. (e.g. summary of key research findings as well as details of study and researcher)		4–5
Refers to one or more examples of psychological research but without any detail (e.g., name of researcher and/or basic description of the study or findings only)		2–3
One or more personal or real life examples provided as evidence		1
No supporting psychological evidence, or all evidence is incorrect/irrelevant		0
Structure		3
Well-constructed argument, well-developed sentences and paragraphs; uses appropriate psychological language with accurate grammar, spelling, and punctuation.		3
Clear everyday language with adequate grammar, spelling, sentences and paragraph structure.		2
Poor literacy skills may interfere with the ability of the marker to understand the response (e.g., very poor spelling, grammar, poor sentence and paragraph structure).		1
Response is unable to be understood.		0
Total		20

Question 10**(20 marks)**

“As citizens of the twentieth century, we have witnessed more change in our daily existence and in our environment than anyone else who ever walked the planet.” (Cascio, 1995, p. 928)

Discuss, using **three** detailed examples, how the development of technology has led to social changes. In your answer, focus on either changes in the family **or** changes in the workforce.

In your answer you should

- provide an introduction that gives an overview of the development of technology and its impact on society.
- choose one technology and give **three** specific examples of how it has influenced either the family **or** the workforce.
- refer to psychological evidence relevant to each example.
