

PSYCHOLOGY

Stage 3

WACE Examination 2015

Marking Key

Marking keys are an explicit statement about what the examiner expects of candidates when they respond to a question. They are essential to fair assessment because their proper construction underpins reliability and validity.

Section One: Research methods

20% (35 Marks)

Question 1

(14 marks)

- (a) Identify the mode of the data in Figure 1. (1 mark)

Description	Marks
Five	1
Total	1

- (b) (i) Effect on mean: (1 mark)

Description	Marks
Mean would go down/decrease	1
Total	1

- (ii) Effect on median: (1 mark)

Description	Marks
Median would not change/would still be 4/no effect	1
Total	1

- (iii) Effect on mode: (1 mark)

Description	Marks
Mode would not change/would still be 5/no effect	1
Total	1

- (c) The American Academy of Paediatrics recommends that young people spend no more than 2 hours per day using electronic devices for recreation. Outline what the data in the Figure 1 indicate about the use of electronic devices by the students at Ridge High School. (2 marks)

Description	Marks
On average, students are spending too much time/more than the recommended time using electronic devices for recreation or A response that correctly quotes specific data from the graph	2
Students are spending too much time/more than the recommended time using electronic devices for recreation	1
Total	2

- (d) (i) Name the type of graph shown in Figure 2. (1 mark)

Description	Marks
Scatterplot	1
Total	1

- (ii) Identify the type of relationship between the variables shown in Figure 2. (2 marks)

Description	Marks
Strong negative correlation	2
Strong correlation; OR Negative correlation	1
Total	2

- (e) The researchers calculated the correlation between the variables in Figure 2 and found $p < .05$. State whether this result was statistically significant. (1 mark)

Description	Marks
Yes (it is statistically significant)	1
Total	1

- (f) Describe what it means when psychologists find a 'statistically significant' result from a statistical test. (2 marks)

Description	Marks
That the result is likely to be a true effect/difference/relationship rather than being due to chance/error	2
The result is likely to be a true effect/difference/relationship; OR The result is not due to chance/error	1
Total	2
Note: Responses such as the following are to be awarded 0 marks: • data are significant • it's 5% likely that the result is due to chance/error.	

- (g) The researchers concluded that using electronic devices for recreation for more than 2 hours per day causes lower achievement test scores in students. State whether this was a correct conclusion to draw and explain your response. (2 marks)

Description	Marks
No	1
Because correlation does not mean causation	1
Total	2

Question 2

(12 marks)

- (a) (i) Identify the independent variable for the study. (1 mark)

Description	Marks
Location; OR Rural or remote versus urban area	1
Total	1

- (ii) Identify the dependent variable for the study. (1 mark)

Description	Marks
Likelihood of seeking help from a psychologist	1
Total	1

- (b) Write an operational hypothesis for this study. (2 marks)

Description	Marks
Hypothesis names both levels of the independent variable and specifies a direction of difference (either direction is acceptable). Example of two mark response People in urban areas will be more/less likely to seek help from a psychologist than people in rural areas	2
Hypothesis names both levels of the independent variable and specifies a difference, but no direction. Example of one mark response There will be a significant difference in the likelihood of rural people seeking help from a psychologist compared to urban people	1
Total	2
Note: 0 marks to be awarded for: • response that only names one level of independent variable (e.g. people from urban areas will be more likely to seek help from a psychologist) • a null hypothesis (predicting no difference).	

- (c) Identify **two** variables the researchers would need to control (i.e. take account of) when conducting this study. (2 marks)

Description	Marks
One mark for each valid variable. Maximum two marks. Answers could include, but are not limited to the following:	
• distance from nearest psychologist • gender • age • culture • previous contact with a psychologist • financial background.	1–2
Total	2

- (d) (i) State what psychologists mean when they say that a questionnaire is 'reliable'.
(1 mark)

Description	Marks
A questionnaire is reliable when it gives stable/consistent scores (over time)	1
Total	1

- (ii) Name and describe **one** type of reliability a psychologist could test for the questionnaire.
(2 marks)

Description	Marks
Test-retest reliability	1
Correlation between scores on the same questionnaire administered some time apart	1
or	
Internal consistency	1
Correlation between responses to items in the questionnaire	1
or	
Split half reliability	1
Score on one half of the questionnaire is correlated with score on the other half of the questionnaire.	1
Total	2

- (e) (i) State what psychologists mean when they say that a questionnaire is 'valid'.
(1 mark)

Description	Marks
A questionnaire is valid when it accurately measures what it claims to measure.	1
Total	1

- (ii) Name and describe **one** type of validity a psychologist could test for the questionnaire.
(2 marks)

Description	Marks
Face validity	1
The items appear to be measuring what they say they are measuring	1
or	
Construct validity	1
Scores on the test are correlated with scores on another measure of the construct of interest	1
or	
Concurrent validity	1
Scores on a questionnaire are correlated with an external variable that reflects the same construct	1
or	
Predictive validity	1
Scores on a questionnaire are correlated with another measure or behaviour that is thought to be related to the construct, that is measured in the future	1
Total	2

Question 3

(9 marks)

- (a) Identify **two** features that make psychological research 'scientific'. (2 marks)

Description	Marks
One mark for each valid feature. Maximum two marks. Answers could include, but are not limited to the following:	
• use of formal/standardised tests/measures • use of experimental designs • control for extraneous variables • conducted to test hypotheses • based on theories.	1–2
Total	2

- (b) In 1963, Stanley Milgram conducted his well-known obedience experiment in which he had participants believe they were giving a fellow participant (who was actually an associate of Milgram) increasingly strong electric shocks. Describe briefly the most significant ethical issue associated with this study and explain why it was a problem. (3 marks)

Description	Marks
The most significant ethical issue was deception	1
Because participants did not understand the true nature of the study	1
Therefore they were unable to give informed consent	1
Total	3

- (c) Describe **two** ways in which researchers should behave professionally with participants when they are conducting psychological research. (4 marks)

Description	Marks
Two marks for each example. Maximum four marks. Answers could include, but are not limited to the following:	
Example of two mark responses • being on time because it is disrespectful to waste the time of participants. • using appropriate language so that participants understand the instructions you are giving them. • dressing appropriately to convey a professional image. or Any correct example of ethical conduct, such as confidentiality, informed consent, debriefing, withdrawal rights etc.	2
Example of one mark response • be on time • be courteous • be respectful • dress appropriately. • use appropriate language.	1
Total	4

Question 4

(18 marks)

- (a) Complete the table below by naming the lobes of the brain shown in Figure 3 and describing **one** main function of each lobe. (8 marks)

Description			Marks
One mark for name. One mark for function. Maximum eight marks.			
	Name of Lobe	Function	
A	Frontal Lobe	Any one of: cognition, attention, memory, decision making, higher mental ability, motor planning, control of movement	1–2
B	Temporal Lobe	Any one of: hearing, speech, memory, object recognition, semantic knowledge	1–2
C	Parietal Lobe	Any one of: memory, spatial-motor mapping, attention, bodily sensations such as temperature and touch	1–2
D	Occipital Lobe	Vision	1–2
Total			8

- (b) Name the area of the brain associated with each of the following dysfunctions.

- (i) Fluent Aphasia: where a person speaks in long and complex sentences that cannot be understood by others. (1 mark)

Description	Marks
Wernicke's Area	1
Total	1

- (ii) Inability to understand the body's location in space. (1 mark)

Description	Marks
Sensory cortex/primary sensory area	1
Total	1

- (iii) Inability to initiate movement. (1 mark)

Description	Marks
Motor Cortex/Primary motor area	1
Total	1

- (iv) Non-fluent Aphasia: where a person has difficulty in getting words out but is normally understood by others. (1 mark)

Description	Marks
Broca's Area	1
Total	1

Question 4 (continued)

- (c) Name **one** physiological and **one** psychological effect of each of the following classes of psychoactive drugs.

- (i) Stimulants (2 marks)

Description	Marks
One mark for each valid effect. Maximum two marks. Answers may include, but are not limited to the following:	
Physiological effect: • speed up activity in the CNS • increase heart rate • rapid breathing, etc.	1
Psychological effect: • increased feelings of excitement • higher energy level • increased confidence, etc.	1
Total	2

- (ii) Depressants (2 marks)

Description	Marks
One mark for each valid effect. Maximum two marks. Answers may include, but are not limited to the following:	
Physiological effect: • reduced activity in the CNS • decreased heart rate • slower breathing • reduced coordination, etc.	1
Psychological effect: • feel less stressed/calmer • relieves anxiety, etc.	1
Total	2

- (iii) Hallucinogens (2 marks)

Description	Marks
One mark for each valid effect. Maximum two marks. Answers may include, but are not limited to the following:	
Physiological effect: • increased heart rate • increased blood pressure • increased body temperature • blurred vision • dilated pupils • convulsions/seizures.	1
Psychological effect: • disrupted cognition • altered perceptions • distorted sense of time • hallucinations • mood swings • dissociation • depersonalisation, etc.	1
Total	2

Question 5

(13 marks)

- (a) Hayley auditioned for the lead role in the school drama production but was unsuccessful. Hayley thought, 'This means that I will never reach my goal of being an actor'. Name **one** way Hayley might have felt after having this thought. (1 mark)

Description	Marks
One mark for a valid example. Answers may include, but are not limited to the following:	
• sad • discouraged • depressed • despairing • hopeless.	1
Total	1

- (b) Samantha also auditioned for the lead role in the production and was unsuccessful. However, she still felt motivated to focus on her goal of being an actor. Provide an example of a thought that Samantha might have had when she found out that she was unsuccessful in her audition. (1 mark)

Description	Marks
One mark for a valid example. Answers may include, but are not limited to the following:	
• I can always audition for the next production • it doesn't matter if I didn't get the lead role, maybe I can audition for one of the other roles • just because I did not get this role this does not mean that I will never get any other roles in the future.	1
Total	1

- (c) The basic principles underlying cognitive behavioural therapy can be represented as follows.

Event ⇒ Thoughts ⇒ Feelings ⇒ Behaviours

Referring to these basic principles, explain how cognitive behavioural therapy can be used to help people to modify their negative feelings and behaviours. (2 marks)

Description	Marks
Because the way we think about an event affects the way that we feel, to change our feelings we need to change the way that we think	1
If we feel better/more positive, this will lead us to behave in more positive ways	1
Total	2
Note: Responses that indicate changing thinking/positive thinking leads to a change in behaviour are to be awarded 0 marks.	

Question 5 (continued)

- (d) Outline **two** strategies that are used in cognitive behavioural therapy to help clients modify negative thoughts. (2 marks)

Description	Marks
One mark for a valid strategy. Maximum two marks. Answers may include, but are not limited to the following:	
- getting the client to keep a diary of their thoughts so that they become aware of them - getting the client to challenge their negative thoughts / look for evidence that supports or contradicts their negative thoughts - checking whether the person is 'jumping to conclusions' without having any evidence for their negative thought - checking whether the person is 'mind reading' or thinking that they know what someone else thinks about them - asking the client to think about how likely it is that something negative will actually happen - asking the client to think about how bad it would really be if the negative thing actually happened/was true - getting the client to try out something (behavioural experiment) to see what actually happens	1–2
Total	2
Note: single word responses are to be awarded 0 marks. Candidates are required to 'outline'.	

- (e) Define 'daydreaming'. (2 marks)

Description	Marks
When a person turns their attention away from external stimuli	1
to internal thoughts/scenarios/images	1
Total	2

- (f) Outline briefly **one** strategy that is used to alter the normal state of consciousness during meditation. (1 mark)

Description	Marks
Answers may include, but are not limited to the following:	
- focus on the breath/breathing - focus on a simple external stimulus (e.g. sound in the room) - focus on instructor's voice.	1
Total	1

- (g) Name **two** changes in consciousness that a person may experience when under hypnosis. (2 marks)

Description	Marks
One mark for each valid change. Maximum two marks. Answers may include, but are not limited to the following:	
• altered sense of time • altered sense of memory • suggestibility • altered voluntary control over actions.	1–2
Total	2

- (h) Give **one** example of evidence that supports hypnosis being a real altered state of consciousness. (2 marks)

Description	Marks
Example of two mark responses (contains some detail): • when people are told under hypnosis that they will perform a certain behaviour on demand once they are no longer under hypnosis, hypnotised participants are more likely to carry out the behaviour • there is evidence of people enduring painful medical procedures under hypnosis and it is unlikely that they would be able to fake this response • people are able to access deep memories that they are not able to access under normal waking consciousness • EEG patterns/brain waves are different in hypnosis compared to in waking consciousness.	2
Example of one mark response (brief): • physiological evidence (e.g., change in heart rate, change in brain waves) • people can access deep memories • can help people quit smoking.	1
Total	2
Accept other relevant answers.	

Question 6

(12 marks)

- (a) Identify which of the **three** levels of Kohlberg's theory of moral development is reflected in each of the following statements about whether it is acceptable to steal medicine if it will save a life.

- (i) Stealing is not acceptable as it violates the rule of honesty and respect. (1 mark)

Description	Marks
Post-conventional	1
Total	1

- (ii) Stealing is not acceptable as you will end up in prison or have to pay a big fine. (1 mark)

Description	Marks
Pre-conventional	1
Total	1

- (iii) Stealing is not acceptable as it is breaking the law. (1 mark)

Description	Marks
Conventional	1
Total	1

- (b) Explain whether or not people who say it is acceptable to steal in some situations are less morally developed than people who say it is not acceptable to steal in some situations, according to Kohlberg's theory of moral development. (3 marks)

Description	Marks
No, they are not less moral, as	1
Kohlberg's stages are not based on whether the answer is yes or no	1
Stages are defined by the reason / explanation for the response	1
Total	3

- (c) Outline **two** similarities between Kohlberg's theory of moral development and Piaget's theory of cognitive development. (2 marks)

Description	Marks
One mark for each valid similarity. Maximum two marks. Answers may include, but are not limited to the following:	
- both refer to cognitive processes/some of the stages refer to common cognitive processes - both are stage theories/both suggest that individuals master one stage before progressing to the next - they are both constructivist theories saying that development occurs through interaction of the individual with their environment.	1–2
Total	2

- (d) Name **one** researcher who criticised Kohlberg's theory of moral development and explain his or her criticism. (4 marks)

Description	Marks
Name of researcher (date not required)	1
Response refers to a specific criticism (1) and provides an explanation to support the criticism (2)	3
Response refers to a criticism (1) and provides a simple description (1)	2
Response identifies a criticism	1
Total	4
Gilligan (1977) Gilligan believed that Kohlberg's theory displayed gender bias Gilligan believed this because the theory was developed using only male participants and therefore reflected male morality Gilligan suggests that Kohlberg's theory ignores the female-oriented morality which is based on compassion and care and therefore women tend to be rated as at lower stages of moral reasoning than men Other answers: Shweder, Mahapatra and Miller (1990) (accept Shweder et al., or Shweder) Kohlberg's theory displayed cultural bias It does not take into account cultural context and therefore individual's level of moral development was higher in Western individualistic cultures. For example, in their study 39 scenarios were given to participants in India and the USA. Participants had to decide whether the scenarios were wrong and if so, how wrong. Both cultures agreed that incest was a serious wrong. Most other scenarios did not match/agree. Indian participants believed that a serious violation was to eat chicken and get a haircut after a father's death whereas USA participants believed beating a disobedient wife was a serious wrong Santrock (1999) Kohlberg's theory is culturally biased It does not take into account the values held by different cultures which shape moral reasoning. For example, a study looked at 20 adolescent Buddhist monks in Nepal. They did not base their reasoning on justice which is reflected in Kohlberg's theory. Rather, their reasoning was based on the prevention of suffering and the importance of compassion.	

Question 7

(14 marks)

(a) Describe the origins of personality according to

(i) Freud's psychodynamic theory.

(2 marks)

Description	Marks
Examples of two mark responses: - personality is the result of unconscious motivations that arise from conflicts between the three parts of personality (the id, ego, and superego). (e.g., the ego mediates between the conflicting motivations of the id and the superego). - personality can result from a person becoming fixated in one of the psychosexual stages due to either being frustrated or overindulged in that stage.	2
Examples of one mark response: - interactions/conflict between the id, ego, and superego - fixation at a certain psychosexual stage of development.	1
Total	2
Note: responses that do not involve descriptions to be awarded 0 marks, for example: - unconscious motivations - childhood experiences - psychosexual conflict.	

(ii) Rogers' humanistic theory.

(2 marks)

Description	Marks
Examples of two mark responses: - personality results from the conscious consideration of the ideal vs. the actual self. People strive to become their ideal selves - Rogers believed that all humans are born good but their personalities can become distorted by experiences in childhood.	2
Examples of one mark response: personality originates from a person striving to achieve their potential.	1
Total	2
Note: responses that do not involve descriptions to be awarded 0 marks, for example: - self-concept and self-esteem; conscious motivations; Ideal vs. Actual self - childhood experiences; people are all born good.	

- (b) (i) Identify **one** limitation that is common to both the psychodynamic and humanistic theories of personality. (1 mark)

Description	Marks
Untestable/cannot be scientifically verified	1
Total	1

- (ii) Outline **one** limitation that is specific to the psychodynamic theory of personality. (1 mark)

Description	Marks
One mark for a valid limitation. Answers may include, but are not limited to the following:	
- ignores the role of free will - focuses on the unconscious - focuses too much on sexual stages.	1
Total	1

- (iii) Outline **one** limitation that is specific to the humanistic theory of personality. (1 mark)

Description	Marks
One mark for a valid limitation. Answers may include, but are not limited to the following:	
- ignores the role of the unconscious - does not focus on childhood development - unrealistic to state that everyone is born good.	1
Total	1

- (c) Joe and his colleagues have learned that the company they work for is going to make a number of staff members redundant. Joe is worried that he might lose his job and begins to behave differently around his co-workers. He no longer helps his colleagues, prefers to work on his own, and has become competitive in his work. Refer to Maslow's hierarchy of needs to explain Joe's behaviour. (3 marks)

Description	Marks
Because of the threat of losing his job, Joe's 'safety' needs have become more important than	1
His 'belongingness' needs (that are higher in Maslow's hierarchy)	1
Therefore he is more focused on looking after himself to keep his job than helping or cooperating with his colleagues	1
Total	3

Question 7 (continued)

- (d) Describe the contribution Gordon Allport made to the development of the trait theory of personality. (2 marks)

Description	Marks
Examples of two mark responses: - Allport found thousands of words in the dictionary that described personality and reduced that list into meaningful groups of traits - Allport described three types of personality traits: central, cardinal and secondary - Allport's descriptions of personality led to other researchers using factor analysis to find small numbers of psychologically meaningful traits.	2
Example of one mark response: Allport developed descriptions of personality.	1
Total	2
Responses that refer in general to personality traits as characteristics of individuals are to be awarded 0 marks.	

- (e) Outline **two** contributions trait theory has made to our understanding of personality. (2 marks)

Description	Marks
One mark for a valid example. Answers may include, but are not limited to the following:	
- trait theory explains why people are different - understanding traits can help us predict how people might behave in different circumstances - trait theory describes personality across a number of dimensions - trait theory helps to explain why personality is stable over time because traits have a genetic basis - Personality is thought to have a genetic basis but is also shaped by the environment.	1–2
Total	2

Question 8

(11 marks)

- (a) Define 'cognitive dissonance'.

(2 marks)

Description	Marks
Tension or discomfort	1
that arises from holding two conflicting beliefs OR that arises from a discrepancy between one's belief and behaviour	1
Total	2

- (b) Tim is a very health-conscious adolescent. He receives a new mobile phone for his birthday and is enjoying all the new functions. He then reads that mobile phones may be linked to cancer due to the radiation they emit. Tim experiences cognitive dissonance. Explain why.

(2 marks)

Description	Marks
Response refers to Tim's specific beliefs and behaviours	2
Response refers to either Tim's beliefs or behaviours	1
Total	2
Answers could include: - Tim is experiencing conflict between his beliefs about health (1) and his behaviour- using a mobile phone which may be harmful to his health (1) - Tim is experiencing conflict between valuing protecting his health (1) and using a harmful phone (1).	

- (c) Outline **three** strategies that Tim might use to reduce the cognitive dissonance.

(3 marks)

Description	Marks
One mark for each strategy. Maximum three marks. Answers may include, but are not limited to the following:	
- seek out new information that disputes the link between cancer and mobile phone use - change his views about health (place less importance on health) - get rid of the new mobile phone - buy an anti-radiation cover for his phone.	1–3
Total	3

- (d) Jared's parents expect him to do very well at school. Jared gets a very good grade in Science but a very bad grade in French. Referring to attribution theory, give an example of how Jared might explain each grade to his parents.

(4 marks)

Description	Marks
Two marks for each subject. Maximum four marks.	
Response includes an attribution and an example	2
Response includes either an attribution or an example	1
Total	4
Answers could include: - he would attribute his success/good score in Science to personal characteristics such as studying very hard/having a natural talent in Science - he would attribute his failure/bad score in French to external factors such as the teacher disliking him/ the difficulty of the French test.	

Question 9

(15 marks)

- (a) (i) Describe briefly how mediation can be used to resolve a conflict between two parties. (1 mark)

Description	Marks
One mark for a valid example. Answers may include, but are not limited to the following:	
- a mediator can help the parties focus on the issues and reach a voluntary solution - a mediator can help facilitate the discussion between two conflicting parties - a mediator can help conflicting parties understand each other's perspectives and come to an agreement.	1
Total	1

- (ii) Name and outline **two** different types of solutions that may be reached as a result of mediation. (4 marks)

Description	Marks
Names and describes a type of solution	2
Names or describes a type of solution	1
Total	4
Distributive solution: A (lose/lose) solution where neither party gets exactly what they want but they come to a compromise. Integrative solution: A (win-win) solution where both parties achieve what they want.	

- (b) Yasmin and Toby are siblings and are arguing about which television program they will watch. Their mother resolves the conflict by turning off the television and telling them to go to their bedrooms.

- (i) Name the type of solution that was used to resolve this conflict. (1 mark)

Description	Marks
Imposed	1
Total	1

- (ii) Outline **two** disadvantages of this type of solution. (2 marks)

Description	Marks
One mark for a disadvantage. Maximum two marks. Answers may include, but are not limited to the following:	
- neither party may get what they want - parties do not have control over the decision-making - the parties do not develop skills in communicating or resolving conflict that they could use in future.	1–2
Total	2

- (iii) Name and outline **one** alternative technique that could be used to resolve this conflict. (3 marks)

Description	Marks
Names and describes a technique relevant to resolving this conflict (referring to the scenario)	3
Names and describes a general technique for resolving conflict	2
Names OR describes a general technique for resolving conflict	1
Correct examples include: Negotiation: - Yasmin and Toby to come to an agreement about what program they will watch; one person might get to watch their preferred program today and the other person tomorrow. Mediation: - Yasmin and Toby could ask their mother to mediate to so that they can work out a possible solution without arguing. Counselling: - Counselling could assist Yasmin and Toby to develop their assertive communication skills to assist them to resolve/avoid conflict in the future.	
Total	3

- (c) Explain **two** ways in which counselling is different from mediation. (4 marks)

Description	Marks
Two marks for each example. Maximum four marks.	
Examples of two mark response (explicitly compares mediation and counselling): - in counselling, the focus might be on dealing with emotions related to the conflict and/or might be about solving the conflict, whereas in mediation the focus is solely on resolving the conflict. - in mediation both parties have to be present whereas one or both parties might seek counselling either separately or together. - people might learn new skills in counselling that will help them solve problems in the future but in mediation the focus is just on solving the current problem	2
Examples of one mark response – does not explicitly compare counselling to mediation: - in mediation the focus is on solving a specific conflict - mediation does not focus on people's feelings.	1
Total	4
Accept other relevant answers.	

Question 10

(12 marks)

- (a) Provide **two** reasons why the study of attachment by psychologists is important.

(2 marks)

Description	Marks
One mark for each reason. Maximum two marks. Answers may include, but are not limited to the following:	
- tells us about the influence of child-rearing practices on behaviour/attachment - tells us about the influence of culture on behaviour/attachment - reveals patterns about future behaviour. For example, future performance at school and types of peer relationships - helps us to understand behaviour of children brought up in orphanages.	1–2
Total	2

- (b) (i) Name the most common type of attachment observed across cultures. (1 mark)

Description	Marks
B/Type B/Secure attachment	1
Total	1

- (ii) Outline **two** features of this type of attachment.

(2 marks)

Description	Marks
One mark for each feature. Maximum two marks. Answers may include, but are not limited to the following:	
- infants use their mother/primary caregiver as a secure base to explore from - infants become distressed when they are separated from their mother/ primary caregiver - infants seek comfort from their mother/primary caregiver when united after a separation.	1–2
Total	2

- (c) (i) Name **two** types of insecure attachment.

(2 marks)

Description	Marks
One mark for each insecure type named. Maximum two marks. Answers may include, but are not limited to the following:	
- Type A/anxious – avoidant/insecure avoidant - Type C/anxious-resistant/insecure ambivalent/insecure resistant.	1–2
Total	2

Question 10(c) (continued)

- (ii) Nadia is a two-year-old who became lost in a shopping centre. Outline how Nadia might have behaved when she was reunited with her mother if she had an insecure attachment. (1 mark)

Description	Marks
Outlines the behaviours observed in an insecure attachment	1
Total	1
Answers could include: • avoids or ignores her mother; does not look at her or seek contact with her • resists her mother by clinging to her but also kicking and pushing her away.	

- (d) Describe **one** cultural difference that is believed to have an impact on attachment. Support your response with reference to psychological research. (4 marks)

Description	Marks
Describes a cultural difference, names researcher(s) and clearly describes their research findings	4
Describes a cultural difference, names researcher(s) and briefly describes their research findings	3
Describes a cultural difference with limited reference to psychological evidence	2
Identifies a cultural difference with no supporting psychological evidence	1
Total	4
Answers could include: • sleeping arrangements – with the mother vs away from the mother Sagi and colleagues (1994) found that children raised in traditional kibbutzim, where they live in an 'infant house' from the age of six weeks and are cared for by professional carers, showed higher levels of anxious-avoidant attachment compared to children raised in home-based kibbutzim. (evidence from Fletcher & Garton, 2007, p. 386) (2) • child care arrangements – child care vs home Van Ijzendoorn and Kroonberg (1988) found Type A was relatively more common in Western European countries and Type C relatively more common in Japan and Israel where children spend little time away from the mother.	

Question 11

(8 marks)

The use of technology for communication is one example of a societal change in values and practice. Using your psychological knowledge, explain **two** examples of the impact of this change on

(a) families.

(4 marks)

Description	Marks
Two marks for each example. Maximum four marks. Answers may include, but are not limited to the following:	
- negative impacts on face-to-face communication between family members because of reliance on SMS/email, etc. instead - positive impacts of technology related to being able to keep in touch with family members who live far away, e.g. through Facebook, email, SMS, Skype, etc. - fly-in-fly-out families are more common and technology for communication can help maintain family relationships, e.g. parents can phone or Skype to say goodnight to their children - young people using technology for communication can cause conflict with parents, e.g. parents finding out what their children have been doing via Facebook, Instagram, etc. - young people using technology for communication with friends can impact on quality time spent with family - people may be able to work from home and use technology to communicate with their colleagues and this might have positive effects on families such as effects of more flexible work hours (e.g. being able to pick children up from school) or reducing time and cost of travelling to work - using technology to communicate may have negative effects on families such as parents always checking their work emails or being available on mobile phones.	1–4
Total	4
Two marks for detailed response or specific response with example One mark for brief or general response.	

(b) communities.

(4 marks)

Description	Marks
Two marks for each example. Maximum four marks. Answers may include, but are not limited to the following:	
- businesses/organisations might be more global, having staff working in different locations, being able to provide a broader service for customers - reduced sense of community with people using more online forms of communication to do business, such as banking, shopping, etc. - technology might be used to bring people in communities together, such as the large screens set up in public places for people to gather to watch sporting events or cultural events - communication technology might have negative effects on communities, such as cyberbullying, posting/sharing photos that violate people's privacy, spreading rumours.	1–4
Total	4
Two marks for detailed response or specific response with example One mark for brief or general response.	

Section Three

25% (62 Marks)

Question 12

(32 marks)

You work for an advertising company that has been contracted by the Department of Health to develop a television advertisement promoting better drinking habits among young adults. Your task is to design the advertisement and then to present your ideas to a panel of managers from the Department.

Explain, using examples, the factors that you would consider when designing your advertisement. Refer to the following aspects of persuasive communication and support your response with psychological evidence:

- source of the message
- nature of the communication
- characteristics of the audience.

Referring to Robinson's social skills, describe **three** factors that you should consider in order to make a good impression when you are presenting your advertisement to the panel.

Description	Marks
Three marks for each of the three factors of persuasive communication. Maximum nine marks.	
Explains how the factor is used to persuade an audience	3
Describes the factor in terms of its features	2
A brief description of the factor is provided	1
Two marks for each factor's advertisement features. Maximum six marks.	
Clearly describes features of the advertisement with an explanation of how it was influenced by the factor	2
Describes features of the advertisement with some links to how it was influenced by the factor	1
Total	15
Answers could be any three of the following: 1. Source of the message • accept message from person with perceived expertise in the area, expertise comes from occupation • fast-talkers are perceived as more intelligent and knowledgeable, therefore more persuasive (Smith and Shaffer, 1995) • trustworthiness (used by politicians to cast doubt on opponents) ◦ advertisement would feature a sports star that young people trust as being honest. ◦ This person may have had some bad experiences and has learnt from their mistake ◦ The person may have had friends suffer as a result of poor drinking habits and can share his experiences	

Question 12 (continued)

Description	Marks
2. Nature of the communication - needs to be understood - persuasion via an emotional response: research is mixed - message that makes us feel good will persuade us, but some say that when in a good mood, people are less likely to carefully process the information and will not be persuaded by a rational argument but might be persuaded by an 'expert' - persuasion via inducing fear is successful when the message arouses sufficient anxiety to convince us to attend to the message. However, too much anxiety and avoidance of the message will occur - advertisement could include a tragic story of how the sports star lost an amazing opportunity because of his actions while drunk - the sports star talks about his success being the result of smart drinking habits - options above are not too extreme to cause anxiety that might make the viewer avoid the message - the star needs to speak clearly to be understood 3. Characteristics of the audience - Cacciopo and Petty (1982) – need for cognition (individual differences) - High need – provide pros and cons, strong argument - Low need – persuaded by expertise or trustworthiness of speaker - Yunxia (2000-01) – logic vs emotion (cultural differences) - Kim and colleagues (1998) hint strategies vs direct requests (cultural differences) - advertisement needs to be targeted at individuals with high need for cognition and low need for cognition - low need for cognition might be achieved by the trustworthiness of the sports star - high need for cognition might be achieved by having the star provide facts about the dangers and risks associated with poor drinking habits	
Three marks for each factor described using Robinson's social skills. Maximum nine marks.	
Robinson's social skill is identified (1) and a detailed description of how it would be applied in the scenario is provided (2)	3
Robinson's social skill is identified and a brief description of that skill is provided	2
A general description of a social skill is provided	1
Total	9
Answers could include: 1. Shaking hands - hand extension-straight to show you are strong but not overpowering (hand over) or weak (hand under) - pressure – confident, not limp - length of shake – more than 2 shakes but not too long and lingering 2. Terms of address and reference/Forms of address - refer to panel members using Mr and Mrs, Sir/Madam and use titles (Dr, Professor) to show respect and acknowledge their status 3. Politeness - as the presenter, you are asking the panel to consider your advertisement over the other company's advertisement. Presenter needs to display good manners by behaviours such as: - include hedging when making requests such as 'Would you please turn your attention to...' - thanking panel for their time - using appropriate terms of address (above) - apologising if something didn't go to plan (running overtime, etc.).	

Description	Marks
Use of psychological evidence	
Detailed description of one or more examples of relevant psychological research. (e.g. summary of key research findings as well as details of study and researcher)	4–5
Refers to one or more examples of psychological research but without any detail (e.g., name of researcher and/or basic description of the study or findings only)	2–3
One or more personal or real life examples provided as evidence	1
No supporting psychological evidence, or all evidence is incorrect/irrelevant	0
Total	5
Quality of extended response	
Well-constructed response with an introduction, conclusion, and well-developed sentences and paragraphs. Consistent use of appropriate psychological language.	3
Coherent response with adequate sentence and paragraph structure. Use of clear everyday language.	2
Incoherent response, lack of paragraph structure and/or poor sentence structure. Colloquial language or poor English expression.	1
Response is too brief or irrelevant to be awarded marks	0
Total	3
Overall total	32

Question 13

(30 marks)

'The Freudians' are a group of psychology students led by Elena, who meet once a week after school to study and socialise together. Max, another psychology student, decides to start up a second psychology club. He makes a bet with Elena that his club will have more members and be more popular than her club.

Name and describe the factors that contribute to a 'Sense of Community' in a social group according to the McMillan-Chavis Model. For each factor, suggest strategies that Max could use to try to attract members to his new club. Include examples of psychological evidence to support your response.

Description	Marks
Definition of Psychological Sense of Community:	
McMillan and Chavis (1986) A feeling that members have of: • belonging • that members matter to one another and to the group; and • a shared faith that members' needs will be met through their commitment to be together	1–2
Total	2
Four factors of the model	
Five marks for each factor of the model. Maximum 20 marks.	
1. Membership	1
Description: individual's sense of belonging to the group, feeling part of the group	1
Two or more detailed, relevant examples	3
One detailed, relevant example	2
Brief example	1
Examples might include: Boundaries • have a way of identifying who is in the group, e.g., badge, t-shirt • only psychology students (who are not members of the other group) are allowed to belong to the group • decide on a place where they will meet and use this for all meetings Common symbol system • have a group name (selected by group members) • have other group symbols (e.g. logo, colours, handshake, etc.) Emotional safety • develop a 'code of conduct' or 'etiquette' for how people who are in the group are expected to behave Personal investment • individuals to go through some kind of application or selection process to be a member of the group so they feel that they have earned their membership.	
Total	5

Description	Marks
2. Influence	1
Description: a sense of mattering, of making a difference to the group, and of the group mattering to its members. This is a two way relationship between the group and its members	1
Two or more detailed, relevant examples	3
One detailed, relevant example	2
Brief example	1
Examples might include: - group members taking it in turn to lead the meeting - president of the group being selected by the members - group members having a say in who else is permitted to become part of the group.	
Total	5
3. Integration and fulfilment of needs	1
Description: the feeling that member needs will be met through belonging to the group. This might be through sharing values or resources that provide 'reinforcement' to the individual for belonging to the group	1
Two or more detailed, relevant examples	3
One detailed, relevant example	2
Brief example	1
Examples might include: - members to be involved in deciding what the group's activities are, to ensure that the group serves members' needs - Max might focus on the benefits for students of their psychology study of being part of the group, e.g. access to extra tutoring, guest speakers, careers advice, practice exam questions - Max might focus on the social benefits of being part of the group, for example, making friends, support for stress of managing exams, etc. - Max might promote the club as a source of advocacy for students; for exam talking to teachers about the need for resources, etc.	
Total	5
4. Shared emotional connection	1
The commitment and belief that members have, and will share history, common places, time together, and similar experiences Refers to an intangible, spiritual bond that develops between members based on the quality of interactions within the community	1
Two or more detailed, relevant examples	3
One detailed, relevant example	2
Brief example	1
Examples might include: - meet regularly so people spend time together and get to know each other - participate in some 'getting to know you' activities or social activities - have regular 'awards' for group members for their achievements, as being rewarded in front of a community makes a person more attracted to that community - work on a project or participate in a meaningful activity together (shared event) to create a bond between members (e.g. a fundraising event or volunteer activity) - celebrate achievements (e.g. have a party after exams or a big test).	
Total	5

Question 13 (continued)

Description	Marks
Use of psychological evidence	
Detailed description of one or more examples of relevant psychological research. (e.g. summary of key research findings as well as details of study and researcher)	4–5
Refers to one or more examples of psychological research but without any detail (e.g. name of researcher and/or basic description of the study or findings only)	2–3
One or more personal or real life examples provided as evidence	1
No supporting psychological evidence, or all evidence is incorrect/irrelevant	0
Total	5
Quality of extended response	
Well-constructed response with an introduction, conclusion, and well-developed sentences and paragraphs. Consistent use of appropriate psychological language.	3
Coherent response with adequate sentence and paragraph structure. Use of clear everyday language.	2
Incoherent response, lack of paragraph structure and/or poor sentence structure. Colloquial language or poor English expression.	1
Response is too brief or irrelevant to be awarded marks	0
