WORKSHEET

Equations of lines parallel to axes

I am enough of an artist to draw freely on my imagination. Imagination is more important than knowledge.

Albert Einstein

Rule

If a linear function is parallel to the x-axis and passes through the point (a, b), then the equation of the line is $y = b$.
If a linear function is parallel to the y-axis and passes through the point (a, b), then the equation of the line is $x = a$.

Questions

Find the equations of the following lines.

1 Parallel to the x-axis and passing through $(5, 2)$

2 Parallel to the y-axis and passing through $(1, -3)$

3 Parallel to the y-axis and passing through $(4, 7)$

4 Parallel to the x-axis and passing through $(-1, -5)$

5 Parallel to the y-axis and passing through $(2, 8)$

6 Parallel to the x-axis and passing through $(2, -3)$

7 Parallel to the x-axis and passing through $(0, 7)$

8 Parallel to the y-axis and passing through $\left(\frac{1}{2}, 4\right)$

9 Parallel to the x-axis and passing through $(3, -1)$

10 Parallel to the y-axis and passing through $(-8, 2)$

11 Parallel to the y-axis and passing through $(-5, -2)$

12 Parallel to the x-axis and passing through $(1, 3)$

13 Parallel to the x-axis and passing through $(9, 0)$

14 Parallel to the x-axis and passing through $\left(-\frac{1}{3}, \frac{3}{4}\right)$

15 Parallel to the y-axis and passing through $(6, 4)$

16 Parallel to the y-axis and passing through $\left(-\frac{2}{5}, \frac{1}{7}\right)$

Solutions

A $y = 2$

C $y = 7$

D $x = -5$

E $y = -3$

G $y = 0$

H $x = -\frac{2}{5}$

I $x = 6$

K $y = \frac{3}{4}$

L $y = -1$

M $x = 4$

N $x = -8$

O $x = 2$

R $x = 1$

S $y = -5$

T $x = \frac{1}{2}$

W $y = 3$
