WORKSHEET

Chapter 8: Frequency distribution tables

Students were given a 20-question maths test. The numbers of correct answers were:

15	12	18	19	10	12	9	16	15	7	19	4	20
17	12	20	18	15	14	12	12	16	7	15	9	18
17	10	9	20									

1 Draw up a frequency distribution table to represent the data.

2 What was the most common number of correct answers?

3 How many students got all 20 questions correct?

4 How many students got 10 or more questions correct?

5 How many students gave less than 15 correct answers?

A speed camera takes photographs of speeding vehicles and the number of kilometres per hour over the speed limit the vehicle was travelling is recorded. During an 8-hour period the following data was recorded:

11	6	10	2	5	5	8	17	14	21	3	18	14
21	9	3	6	11	8	2	17	8	3	11	17	8
5	20	21	10

6 Draw up a frequency table to represent the data.

7 How many drivers were travelling 18 km/h over the speed limit?

8 What was the most common number of km/h over the speed limit?

9 The harshest penalties are reserved for those travelling at more than 20 km/h over the speed limit. How many drivers committed this crime?

10 Severe penalties are placed on drivers who travel at more than 15 km/h and up to 20 km/h over the speed limit. How many drivers fitted into this category?

Batches of 100 computer parts are checked for faults. The number of faulty parts in each batch was:

4	0	1	1	0	1	0	5	7	3	0	2	5
1	1	3	0	4	0	0	1	9	3	0	1	5
0	1	0	1									

11 Draw up a frequency table to represent the data.

12 How many batches had 1 faulty part?

13 What was the most common number of faulty parts?

14 How many batches had fewer than 3 faulty parts?

15 If a batch has more than 4 faulty parts, the entire batch is rejected. How many of the batches were rejected?
