YEAR 12 GENERAL MATHEMATICS INVESTIGATIVE TASK 2

Networks

Question 1

Consider this graph showing different locations at a music festival.

Key:

G: Gate

S: Stage

W: Water

F: Food

T: Toilet

a Identify the number of edges and vertices in this graph.

1 mark

b Which food stand(s) are adjacent to stage 2?

1 mark

c Which stage is directly connected to all others?

1 mark

d What is the degree sum of this graph?

1 mark

© Cengage Learning Australia Pty Ltd 2014

e State which vertex has the highest degree. State the magnitude of this degree.

1 mark

f Create an adjacency matrix for the graph.

1 mark

g Is there a stage that is not directly connected to food, water or a toilet? If so, state which stage, and to what it is not connected.

2 marks

h Lisa enters gate 2, watches bands at stages 1 and 4 and then leaves. Define a walk that she could complete.

2 marks

© Cengage Learning Australia Pty Ltd 2014

i Decide whether the graph is Eulerian or semi-Eulerian and hence define a closed or open trail that exists.

4 marks

Total 14 marks

Question 2

Consider this information showing the distances in kilometres between camping sites at a national park.

	Bandicoot Bend	Possum Place	Numbat Nest	Kangaroo Kips	Quiet Quoll	Wombat West
Bandicoot Bend	—	—	14.7	—	9.2	7.6
Possum Place	—	—	11.5	—	—	15.2
Numbat Nest	14.7	11.5	—	—	13.1	—
Kangaroo Kips	—	—	—	—	8.8	12.6
Quiet Quoll	9.2	—	13.1	8.8	—	4.8
Wombat West	7.6	15.2	—	12.6	4.8	—

a Draw a graph to represent the information in the table.

2 marks

b Which campsite is not connected to Wombat West?

1 mark

© Cengage Learning Australia Pty Ltd 2014

c Charlie hiked 11.2 km to Quiet Quoll and, over the next few days, hiked to Wombat West, Possum Place, Numbat Nest, back to Quiet Quoll and then out again. Assuming he followed the direct trails between each campsite, what distance did Charlie cover?

1 mark

d What is the shortest distance from Numbat Nest to Wombat West?

1 mark

e Define the Hamiltonian cycle that exists and state the distance that it covers.

3 marks

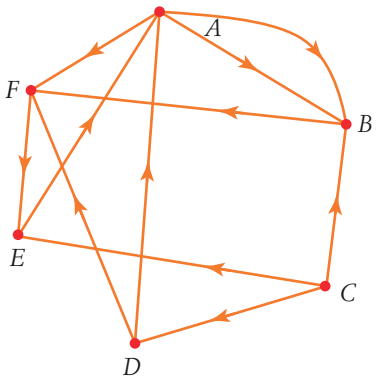

f Use Prim's algorithm to find the minimum spanning tree and hence find the minimum distance between all campsites.

Question 3

Consider this directed network.

a Which locations are not accessible from *E*?

1 mark

b List all possible paths from *E*.

2 marks

c Represent the one- and two-stage pathways in the directed network in matrix form.

2 marks

This graph actually represents teams in a hockey tournament.

d Who plays the most games?

1 mark

© Cengage Learning Australia Pty Ltd 2014

e Use your answer to part **c** to show who is the dominant team.

2 marks
Total 8 marks

Question 4
Consider the information in this table.

Activity	Time (days)	Immediate predecessor
A	5	–
B	15	*A*
C	8	*B*
D	9	*C*
E	10	*B*
F	7	*E*
G	9	*F*
H	5	*A*
I	12	*H*
J	16	*G, I*
K	4	*D, J*

© Cengage Learning Australia Pty Ltd 2014

a Draw a network for the activities shown in this table.

3 marks

b Which activity is the most common immediate predecessor?

1 mark

c Complete a forward scan to determine the earliest completion time of the project.

3 marks

d Complete a backward scan and hence find the critical path for the network.

3 marks

e List the float times for all non-critical activities and hence determine the activity that can be delayed the longest.

3 marks

© Cengage Learning Australia Pty Ltd 2014

Extra resources are put on so that the time required to complete activities E and F is reduced by 5 days, and activity J is reduced by 2 days.

f Redraw the graph to represent these extra resources.

1 mark

g Determine the new critical path and the new project completion time.

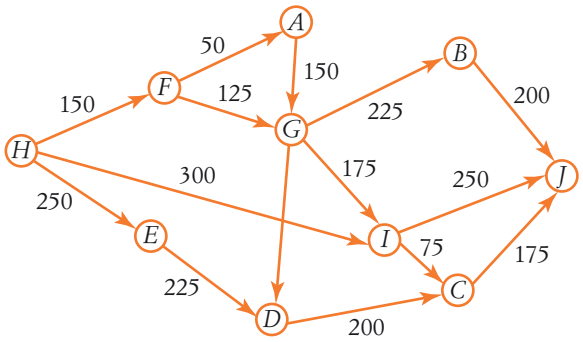

3 marks

Total 17 marks

Question 5

Consider this directed network.

a What is the inflow capacity of vertex *C*?

1 mark

b What is the outflow capacity of vertex *B*?

1 mark

c What is the maximum flow out of vertex *A*?

1 mark

d Determine the maximum flow for this network where source = *H* and sink = *J*.

2 marks

Total 5 marks

Question 6

Consider this table, showing the number of weeks four different companies take to complete four different tasks.

	Task 1	Task 2	Task 3	Task 4
A	13	19	25	16
B	9	13	14	20
C	21	25	27	18
D	22	26	24	15

a Perform a row and column reduction on the table.

2 marks

© Cengage Learning Australia Pty Ltd 2014

b Is the Hungarian algorithm required? If so, perform this to complete the row and column reductions.

3 marks

© Cengage Learning Australia Pty Ltd 2014

c Represent this as a bipartite graph and hence find the optimum allocation.

2 marks

d Hence, find the minimum:

i total time that it would take to complete all four tasks

ii time it would take to complete all four tasks if the four companies are able to work independently of one another.
