

STEM JOBS

FORENSIC SCIENTIST

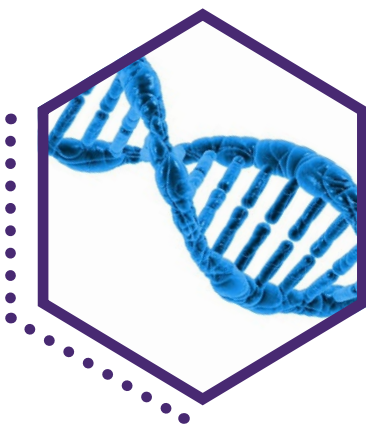

What Is Forensic Science?

Forensic science is a really important job where scientists help solve crimes using science! They use special tools and learn about different sciences like biology and chemistry to figure out what happened during a crime. Forensic scientists work with police officers and lawyers to find the truth about what happened. They're like detectives, but they use science to solve mysteries.

Types of Forensic Scientists

In forensic science, there are scientists who do different jobs to help solve crimes:

- **Forensic Biologists:** They look at things like blood, saliva, hair and DNA from crime scenes to help find clues about what happened.
- **Forensic Chemists:** These scientists check for chemicals at crime scenes, like drugs, explosives, or toxic materials that could hurt people.
- **Forensic Anthropologists:** They study bones from people to figure out how old they were, if they were a boy or girl, where they came from and how they died.
- **Forensic Entomologists:** These scientists look at bugs found at crime scenes. They can tell how long ago someone might have died and help understand what happened.

Becoming a Forensic Scientist

To become a forensic scientist, you have to like solving mysteries and be curious about how things work. You need to be good at noticing little clues that others might not see. Forensic scientists learn about biology, chemistry and physics to help solve crimes. They write reports and sometimes go to court to tell judges and lawyers what they found. To be a forensic scientist, you have to go to university and earn a special degree.

1. Forensic science is about solving...

- ☐ a. mysteries using scientific methods
- ☐ b. crimes using evidence and analysis
- ☐ c. puzzles using science and investigation techniques
- ☐ d. all the above

2. Who do forensic scientists work with to solve crimes?

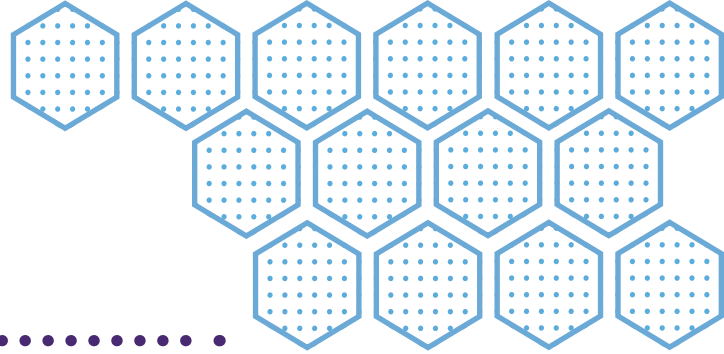

3. Which type of forensic scientist specialises in studying bones from people?

- ☐ a. forensic chemists
- ☐ b. forensic biologists
- ☐ c. forensic entomologists
- ☐ d. forensic anthropologists

4. Forensic chemists' research includes the study of explosives.

- ☐ true
- ☐ false

5. What does a forensic entomologist do?

6. Which of these uses of substances might a forensic biologist study?

- ☐ a. DNA
- ☐ b. blood
- ☐ c. saliva
- ☐ d. all the above

7. What skills do people need to become a forensic scientist?

8. What subjects should you study if you want to become a forensic scientist? Circle all that apply.

- ☐ a. biology
- ☐ b. art
- ☐ c. chemistry
- ☐ d. physics

1. Forensic science is about solving...

- ☐ a. mysteries using scientific methods
- ☐ b. crimes using evidence and analysis
- ☐ c. puzzles using science and investigation techniques
- ☒ d. **all the above**

2. Who do forensic scientists work with to solve crimes?

police officers and lawyers

3. Which type of forensic scientist specialises in studying bones from people?

- ☐ a. forensic chemists
- ☐ b. forensic biologists
- ☐ c. forensic entomologists
- ☒ d. **forensic anthropologists**

4. Forensic chemists' research includes the study of explosives.

- ☒ **true**
- ☐ false

5. What does a forensic entomologist do?

These scientists look at bugs found at crime scenes

6. Which of these uses of substances might a forensic biologist study?

- ☐ a. DNA
- ☐ b. blood
- ☐ c. saliva
- ☒ d. **all the above**

7. What skills do people need to become a forensic scientist?

Like solving mysteries and being curious about how things work.

8. What subjects should you study if you want to become a forensic scientist? Circle all that apply.

- ☒ a. **biology**
- ☐ b. art
- ☒ c. **chemistry**
- ☒ d. **physics**

STEM JOBS

FORENSIC SCIENTIST

What Is Forensic Science?

Forensic science is an exciting and important job where scientists use science to help solve crimes. They have special tools and learn about different sciences like biology and chemistry to understand what happened during a crime scene. Forensic scientists work closely with police officers and lawyers to find out the truth about what happened. They're like detectives, but instead of just following clues, they use science to solve mysteries and bring justice to those involved.

Types of Forensic Scientists

In forensic science, there are scientists who do different jobs to help solve crimes:

- **Forensic Biologists:** They look at things like blood, saliva, hair and DNA from crime scenes to help find clues about what happened.
- **Forensic Chemists:** These scientists check for chemicals at crime scenes, like drugs, explosives, or toxic materials that could hurt people.
- **Forensic Anthropologists:** They study bones from people to figure out how old they were, if they were a boy or girl, where they came from and how they died.
- **Forensic Entomologists:** These scientists look at bugs found at crime scenes. They can tell how long ago someone might have died and help understand what happened.
- **Forensic Pathologists:** They focus on understanding why people die suddenly, unexpectedly or in suspicious ways.

Becoming a Forensic Scientist

To become a forensic scientist, you have to like solving mysteries and be curious about how things work. You need to be good at noticing little clues that others might not see. Forensic scientists learn about biology, chemistry and physics to help solve crimes. They write reports and sometimes go to court to tell judges and lawyers what they found. To be a forensic scientist you have to go to university and earn a special degree.

Biology, chemistry, physics

STEM JOBS

FORENSIC SCIENTIST

What Is Forensic Science?

Forensic science is a fascinating field that uses scientific methods to solve crimes and analyse evidence. It involves applying knowledge from various scientific disciplines to investigate criminal cases and provide answers to questions raised in the legal system. Forensic scientists play a crucial role in helping law enforcement agencies and legal professionals uncover the truth behind crimes.

Types of Forensic Scientists

- **Forensic Biologists:** analyse biological evidence such as blood, saliva, hair and DNA samples collected from crime scenes. They use sophisticated techniques to identify individuals, determine relationships and provide crucial evidence for investigations.
- **Forensic Chemists:** examine chemical substances found at crime scenes, including drugs, explosives and toxic substances. They analyse samples using advanced laboratory equipment to identify substances and provide insights into how they were used or produced.
- **Forensic Anthropologists:** study human skeletal remains to determine factors such as age, sex, ancestry and cause of death. They play a vital role in identifying individuals and reconstructing events related to crimes or mass disasters.
- **Forensic Pathologists:** are medical doctors who specialise in investigating the causes and circumstances of sudden, unexpected, or suspicious deaths. They perform autopsies and examine tissue samples to determine the cause of death and gather evidence for criminal investigations.
- **Forensic Entomologists:** study insects found at crime scenes to estimate the time of death and provide insights into the circumstances surrounding a death. They analyse insect activity and development stages to help establish timelines for criminal investigations.

Becoming a Forensic Scientist

To become a forensic scientist, you need to be curious and enjoy solving mysteries. You should pay close attention to details, like noticing tiny clues that others might miss.

Forensic scientists study different subjects like biology, chemistry and physics. They need to understand how these sciences work together to help solve crimes. They also need to write reports and sometimes even go to court to explain their findings to judges and lawyers.

To become a forensic scientist you need to go to university to earn a degree.

1. In a few sentences, explain in your own words what forensic science is.

2. Why do you think forensic science helps to solve crimes?

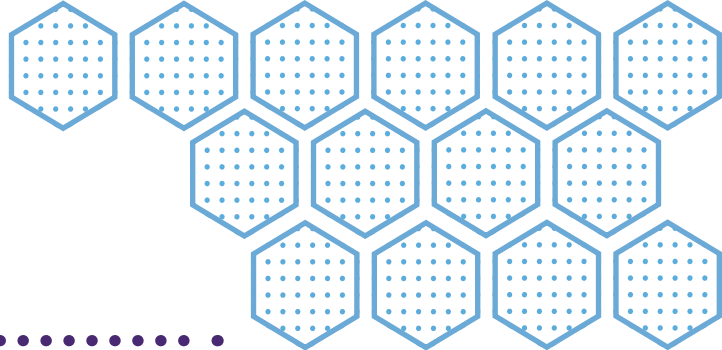

3. Which type of forensic scientist specialises in studying bones from people?

- ☐ a. forensic pathologist
- ☐ b. forensic biologists
- ☐ c. forensic entomologists
- ☐ d. forensic anthropologists

4. Why would a forensic entomologist's research be important?

5. What does a forensic chemist do and how does this help solve crime?

6. What samples might a Forensic Pathologist study to determine a death?

7. What qualities do people need to become a forensic scientist?

8. What subjects should you study if you want to become a forensic scientist?

1. In a few sentences, explain in your own words what forensic science is.

Variations including: It involves applying knowledge from various scientific disciplines to investigate criminal cases and solve crimes.

2. Why do you think forensic science helps to solve crimes?

Provides evidence of people, timing and circumstances of the crime.

3. Which type of forensic scientist specialises in studying bones from people?

- ☐ a. forensic pathologist
- ☐ b. forensic biologists
- ☐ c. forensic entomologists
- ☐ **d. forensic anthropologists**

4. Why would a forensic entomologist's research be important?

Helps to estimate the time of death and provide insights into the circumstances surrounding a death.

5. What does a forensic chemist do and how does this help solve crime?

Examine chemical substances found at crime scenes, including drugs, explosives and toxic substances. Helps to provide evidence or a story about what happened.

6. What samples might a Forensic Pathologist study to determine a death?

Blood, tissues, fingerprints, footprints, hair

7. What qualities do people need to become a forensic scientist?

Like solving mysteries, be curious about how things work, solving mysteries, writing reports, working with others

8. What subjects should you study if you want to become a forensic scientist?

Biology, chemistry, physics
