HISTORY

The Industrial Revolution

1750 – 1914

Rachel Towns

Made for the
Australian Curriculum

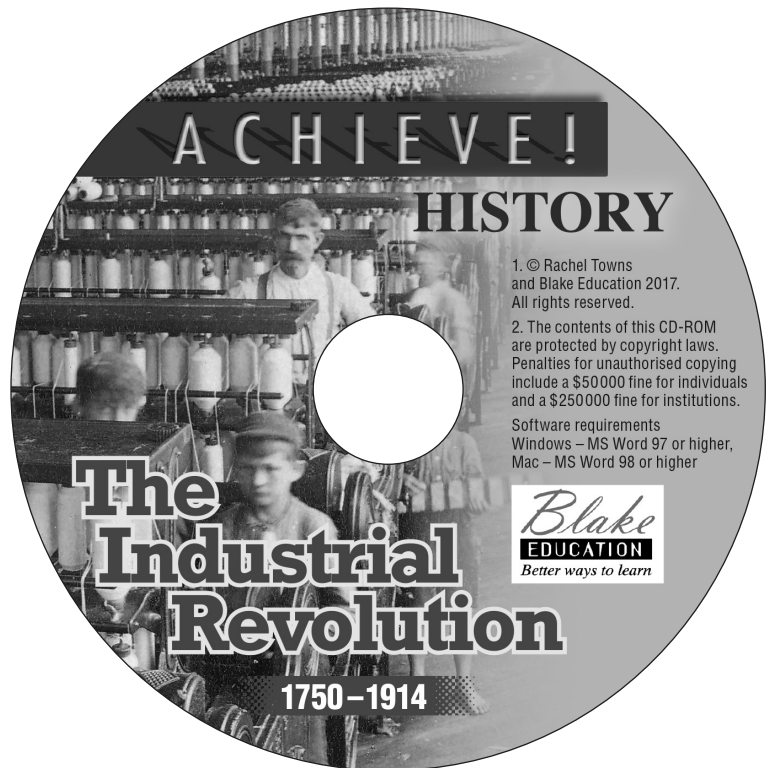

Achieve! History

Features

- ✓ Activities designed to reinforce and enhance literacy skills
- ✓ Emphasis on understanding essential History content
- ✓ Comprehensive Teacher's Notes, providing clear objectives, background information, starter and extension activities
- ✓ CD-ROM containing all the pages from the book that can be used on the Interactive Whiteboard
- ✓ Word documents of all work sheets that can be edited to suit the individual needs of students
- ✓ Illustration files that can be added to new teacher-created work sheets

Marriage and divorce laws	33	Darwinism and social Darwinism	62
Writing women	34	Imperialism	63
Caroline Chisholm	35	Colonialism	64

The *Achieve!* series of History titles has been developed for teachers who require modified, curriculum-focused activities for secondary school students who struggle to read and comprehend regular classroom materials because of poor literacy skills. Many of the pages will also be suitable as supplementary material for regular classes.

The Industrial Revolution 1750–1914 explores the key events that caused the Industrial Revolution and how this impacted on working conditions, agriculture, transport and people's lives around the world, including in Australia. Units about working conditions in factories and mines, the role of trade unions and suffrage illustrate how life changed in the cities and countryside for women, men and children.

The role of social reformers such as Caroline Chisholm, Henry Mayhew and Josephine Butler will assist students in understanding the various social problems of this time and the laws that had to be developed to support and protect people. Key ideas of the time, such as imperialism, nationalism, Chartism, egalitarianism, social Darwinism and communism, are also covered in this title.

The CD-ROM contains all the pages that are featured in the book, as well as a file of illustrations that can be used for other work sheets. These documents can be easily edited to suit the individual needs of students.

This book is divided into ten units, containing photocopiable Resource sheets and Activity sheets. This will allow teachers to use the material in a variety of ways. For example, the unit could be taught as a lesson with students in groups of varying sizes. Alternatively, a single Resource sheet and related Activity sheets can be used as support material, for individual homework, assessment or revision.

The teacher's notes provide valuable guidance about using each unit, and contain the following elements.

Objectives – These are the key skills and knowledge learnt through using the work sheets.

Prior knowledge – This refers to the skills and knowledge required for students to complete the tasks. Some activities are more challenging than others, however, as a rule, students should have a reading comprehension age of six to nine years to be able to attempt the activities.

Background – This section provides additional guidance to help teachers to present a successful lesson. It may include definitions or further background notes about the subject matter.

Starter activity – Warm-up activities are provided to put the content into proper context and to gain student interest and attention.

Resource and Activity work sheets – The Resource sheets do not always contain activities and are used either to stimulate discussion or as a part of the unit's activities. The Activity sheets may be used sequentially or as stand-alone tasks, depending on the needs of the students.

Extension ideas – Additional tasks are suggested to recap the main skills or knowledge taught in the lesson, or to extend, assess or include technology in the lesson.

The Australian Curriculum alignment	Unit									
	1	2	3	4	5	6	7	8	9	10
The technological innovations that led to the Industrial Revolution, and other conditions that influenced the industrialisation of Britain (ACDSEH017)	✓	✓	✓	✓			✓			
The population movements and changing settlement patterns during this period (ACDSEH080)		✓	✓	✓	✓	✓		✓		
The experiences of men, women and children during the Industrial Revolution, and their changing way of life (ACDSEH081)		✓	✓	✓	✓	✓	✓	✓	✓	✓
The short and long-term impacts of the Industrial Revolution, including global changes in landscapes, transport and communication (ACDSEH082)	✓	✓	✓	✓	✓	✓	✓		✓	✓

Every effort has been made to also address the specific curriculum requirements of the states and territories.

Objectives

- Learn about the nature of the Industrial Revolution
- Identify key events that led to the Industrial Revolution
- Explore the trading relationships of countries

Prior knowledge

Students need no prior knowledge for this unit.

Background

Many of the key features of the Middle Ages continued past the period of the Medieval era (approximately 700 CE to 1400 CE). Most people lived on farms or worked on large estates for the wealthy elite. Moving between social classes was almost impossible, as those from the lower classes generally had little access to education or money and could not interact or compete successfully with those who inherited their wealth and power.

Over time, social changes began to challenge these expected ways of living. There was a rapid population growth in the 1800s: from 8 million people in 1801 to 26 million people in 1881. This was because people continued to have large families while improvements in medicines, sanitation and drinking water (later half of 19th century), and the quality of food reduced the mortality rate.

Increasing numbers of people could not remain on the farms where they had traditionally lived because agricultural inventions meant their labour was unnecessary. They were forced to move to cities to look for jobs. Factory owners could then hire large numbers of people as unskilled labourers and so increase their production to meet the increasing need for material goods demanded by the newly established middle class. This led to a demand for improved transport to source raw materials from other countries (usually colonies) and send the finished products from factories in Britain to other parts of the country and overseas.

Starter activity

Show a video or series of images to introduce life in the industrial period.

Useful documentaries include:

- *Tony Robinson's Worst Jobs in History*, Episode: Industrial Jobs

- *The Supersizers Go ...*, Episode: Victorian, BBC
- Brainstorm with the students what you found out about life in the industrial period.

Resource and Activity sheets

The Activity sheet, 'Map of the British Empire', asks students to use a map to identify the locations of key industrial countries and British colonies. Students will use a colour key to identify the trade sources of raw products.

The Activity sheet, 'Technology and transport', lists some key technological events for students to show on a timeline. As an additional activity, students are asked to research three more key events and add them to the timeline.

In the Activity sheet, 'Causes of the Industrial Revolution', students highlight key terms in a list of causes of the Industrial Revolution, organised into themes of agriculture, factories, people and transport. Students then compile a glossary of unfamiliar terms.

In the final Activity sheet, 'Essay plan', students are guided through the process of creating an essay plan using the information from the Resource sheet, 'Causes of the Industrial Revolution'. Discuss the TEEEM structure with the class, especially if students have not used it before. As an extension activity, students are asked to use their plan to write an essay.

TEEEM Paragraph Plan

Always start with a topic sentence and always end with a mini-conclusion. Put the evidence, explanation and essay keywords in the middle in whatever order you like.

- T – Topic sentence: introduce your specific topic
- E – Evidence: to support your ideas
- E – Explain: your ideas in your own words
- E – Essay keywords: use keywords from the essay question and the topic sentence to show you are answering the question
- Mini-conclusion: sum up what you said in that paragraph.

Extension ideas

Students could work individually or in small groups to research a different cause of the Industrial Revolution. Have them use what they find out to create an extended response, poster, video or ICT presentation.

Map of the British Empire

Britain had a large empire in the 1800s. It had conquered many countries including Canada, Australia, China, India, Cuba, Egypt and British Somaliland. These countries became colonies of the British Empire. The British often treated the local people in their colonies badly.

Factory owners in Britain bought raw products like sugar, cotton and wool very cheaply from the colonies. They took the raw products back to Britain and turned them into products like shirts and lollies.

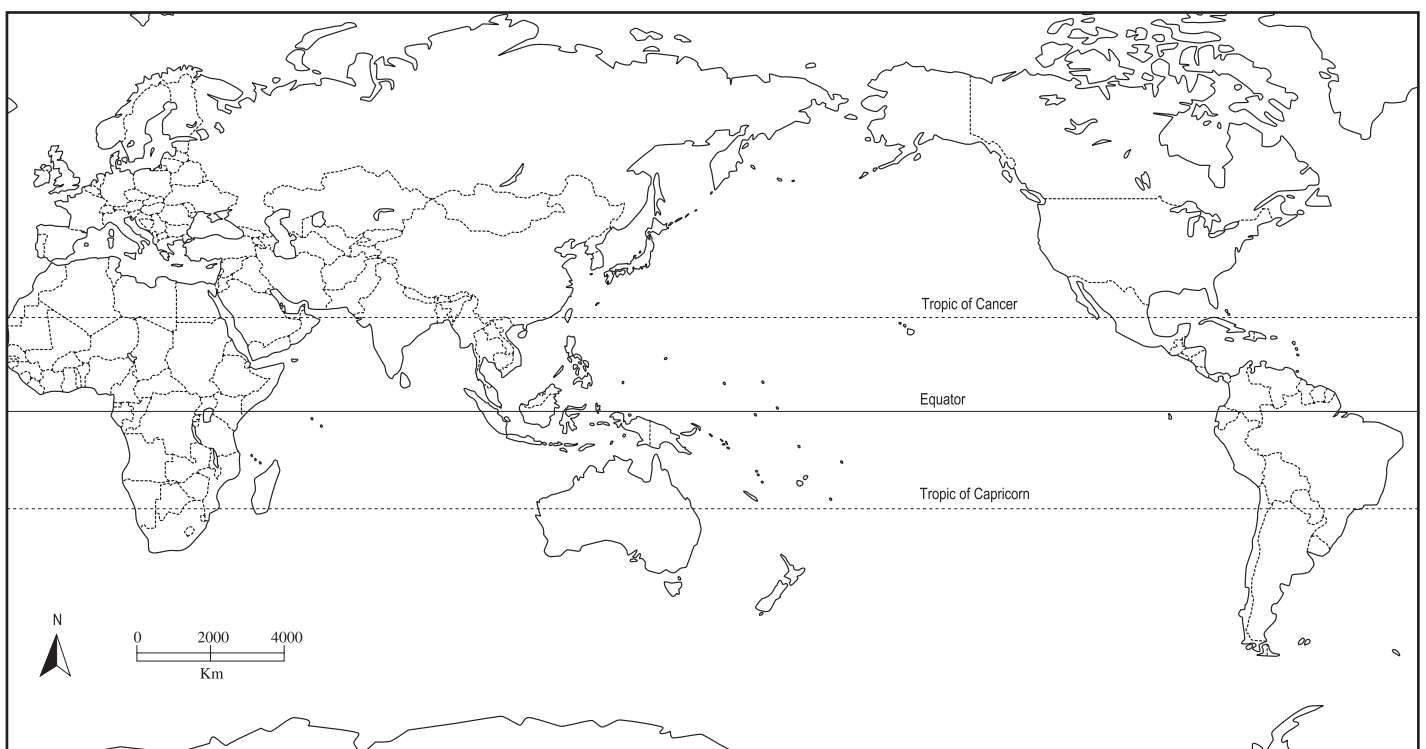

Britain wasn't the only country that was industrialised. France, Germany and Japan started building their own factories in the late 1800s.

 Use an atlas or the internet to complete the map activities.

1 Find these British colonies on the map. Colour them to show the raw products they had. Then label each country.

- **Cotton:** India – yellow
- **Wool:** Australia – blue
- **Cocoa:** Gambia, Sri Lanka (known then as Ceylon) – orange
- **Sugar:** Jamaica, British Guinea, India – red
- **Timber:** Canada, India, Sri Lanka – brown
- **Whale oil:** Australia, Bermuda – green

2 Find the industrial countries Britain, America, France, Germany and Japan on the map. Label them and colour them black.

Technology and transport

 Write each event in the correct place on the timeline.

Use the underlined keywords for your labels. One has been done for you.

1760s: Canals are built to move boats filled with produce.

1793: Eli Whitney invents the cotton gin that cleans raw cotton in factories.

1876: Alexander Graham Bell patents the telephone.

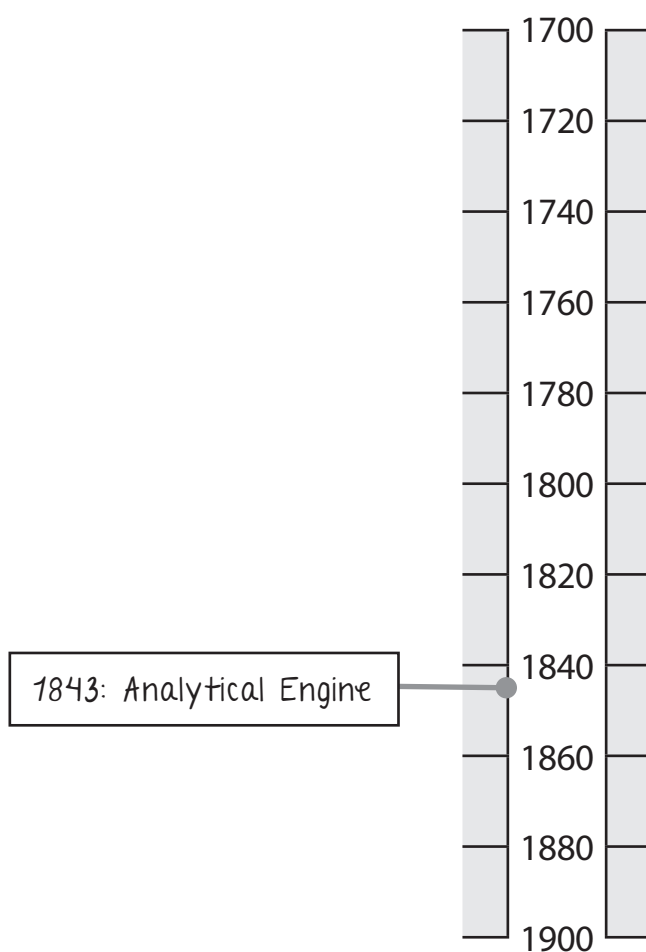

1842: Samuel Morse invents the Morse code.

1769: James Watt invents the steam engine.

1701: Jethro Tull invents the seed drill.

1843: Ada Lovelace and Charles Babbage make the Analytical Engine (the first computer).

1830: The first passenger train, the 'Rocket', travels from Manchester to Liverpool.

Extra activity: Use your textbook or the internet to find three more technology or transport changes in the Industrial Revolution. Add them to your timeline.

Causes of the Industrial Revolution

The Industrial Revolution started in the 1700s (18th century). It began in Britain and then in America, France, Germany and Japan. Many machines were invented and used in factories. New transport like trains and steamships made it easier for people and products to travel.

-  **1** Highlight the keywords (important words) in the table.
- 2** In your workbook, compile a glossary of unfamiliar words and write definitions for them.

Theme	Cause: Explanation
Agriculture	• Enclosure laws: The government forced people to fence in fields. Land was now owned by individuals, not villages. • Stock breeding: Farmers began to mate animals selectively to increase their quality. • Farm machinery: Jethro Tull's seed drill made planting faster and easier.
Factories	• Textile machines: People used new machines to make cloth more quickly. • Bank loans: After banks were invented, people could get loans to invest in factories, machines and land. • Government support: The government encouraged businesses to build more factories. • Unskilled labour in factories: Factory owners hired women and children as unskilled workers. It was cheaper than hiring men.
People	• People movement: There were not enough jobs in the country. People moved to the cities to find jobs in the factories. • Medicine: Improvements in medicine meant fewer people got sick or died. The population grew from 8 million in 1801 to 26 million in 1881.
Transport	• Turnpike tolls: People paid tolls to use the roads. The toll money was used to improve the roads, which made travel easier. • Trains: Steam trains were invented in 1825. People and products could move around more easily. • Canals for transport: Canals were built in the 1760s so that boats could be used to move coal and steel. This was faster than using roads.

Essay plan

Before you write an essay, you need a plan to help your essay make sense.

 Use the Activity sheet, 'Causes of the Industrial Revolution', to complete the plan below.

Essay question: What were the main causes of the Industrial Revolution? Discuss.

1 Highlight the keywords in the essay question above. Write synonyms for these words.

2 In the following plan, you will see that some words are underlined. These are the essay keywords (e.g. Industrial Revolution, causes) and body paragraph keywords (e.g. transport, improvement) or synonyms for these keywords.

Make sure you use the keywords when you are completing the plan. This shows that you are answering the essay question. Highlight or underline the keywords you write to make it clear to yourself that you are using them.

Introduction

Rewrite the essay question.

(Hint: remove question words like 'What' from the essay question to make it a sentence.)

Discuss the topic in general – The Industrial Revolution was when society changed a lot. Life was suddenly centred around factories and machines.

Use keywords – causes, main, Industrial Revolution

Introduce your three body paragraph topics:

- Transport improvements
- Changes in agriculture
- Developments in factories

Essay plan continued

Body paragraph 1: Transport improvements

Topic sentence (introduces your body paragraph) – In the 1700s and 1800s there were many improvements in transport that led to the Industrial Revolution.

Evidence – Turnpike tolls in the 1750s

Explain – These tolls helped to maintain the roads and made it easier to travel around.

Evidence – _____

Explain – The first trains began in 1825, helping to move people and produce from place to place much faster.

Evidence – Canals were made in the 1760s.

Explain – _____

Mini-conclusion (sums up your body paragraph) – Over the 1700s and 1800s there were many changes in transportation: the development of trains, building of canals and charging tolls. All of these helped make moving people and products faster and easier, leading to the Industrial Revolution.

Body paragraph 2: Changes in agriculture

Topic sentence – The changes in agriculture changed society so much that they led to the Industrial Revolution.

Evidence – Jethro Tull's seed drill invented in 1701

Explain – _____

Evidence – _____

Explain – They built fences so land was owned by individuals instead of villages. Easier for one person to become wealthy.

Evidence – stock breeding

Explain – _____

Mini-conclusion – _____

Essay plan continued

Body paragraph 3: Developments in factories

Topic sentence – _____

Evidence – _____

Explain – _____

Evidence – _____

Explain – _____

Evidence – _____

Explain – _____

Mini-conclusion – _____

Conclusion

Sum up the essay question – _____

Your POV (Hint: This is your point of view or argument, whether you agree or disagree) –

Sum up body paragraph 1 – _____

Sum up body paragraph 2 – _____

Sum up body paragraph 3 – _____

Concluding statement (One powerful statement about the topic to finish on)

Extra activity: Write an essay using this plan. There should be five paragraphs: an introduction, three body paragraphs and a conclusion.

Objectives

- Learn about key inventions in the industrial period
- Consider the impacts of these inventions on the development of factories and the lives of the workers
- Explore the rise of the trade union movement in response to the expansion of factories

Prior knowledge

Students should have a basic knowledge of the Industrial Revolution.

Background

The Industrial Revolution can be considered to have begun with inventors who wanted to make products faster and easier. Technological developments were often resisted by the local skilled workers. The workers tried to sabotage the new machines and attack the inventors because skilled labour would no longer be needed to make quality products. These workers were trying to protect their livelihoods.

Wealthy people often valued these new inventions because they made it possible to start factories. With these new machines and cheap unskilled labour, many products could be made at a discounted price, and then sold for a good profit. Many middle class and upper class people could now afford to buy these new factory products. But the lives of the lower class became far more difficult and precarious. Working in factories and coal mines was dangerous, dirty and unhealthy work. Many laboured for long hours for six or seven days each week. If they had a day off, it was usually on Sunday and they were expected to attend church. Family life became more complicated as children often had to work in the factories from a very young age to help support the family.

In response, many men banded together to protect their working rights in the new trade unions. These trade unions took longer to become successful in places like England where the class system was entrenched. However, Australia was often described as a 'working man's paradise' and moved quickly to adopt trade unions. They became a usual part of the Australian working experience and, later, political experience.

Starter activity

Show students images of inventions from the Industrial Revolution, such as the spinning jenny, cotton gin, sewing machine, telegraph and steam engine.

Ask questions about the images and have students give reasons for their answers.

- What do they look like?
- What might they do? How do you know?
- Why might they be important in that time?

Repeat the activity with images of factory and coal workers from the same period.

- How do you think they live?
- What were their living conditions probably like?

Discuss as a group what these images tell us about the Industrial Revolution.

Resource and Activity sheets

The Resource sheet, 'Textiles workers', provides an overview of the impacts of inventions in the textiles industry. All people with a first and last name are real people, with text referring to their lives. Those people with initials as surnames are fictionalised characters whose dialogue is based on historical facts. Students will use this information to complete the Activity sheet, 'Continuity and change', where they consider the positive and negative aspects of inventions.

The Activity sheet, 'Coal mining', explores mining developments. From this information and a primary source – the testimony of Betty Harris – students learn about the effects of these developments.

On the Activity sheet, 'Factories', students consider how factories affected cottage industries. They also explore the new working environments of factory workers.

The Activity sheet, 'Australian and British trade unions', looks at the different experiences of workers fighting for their rights in Australia and Britain.

Extension ideas

Have students explore primary sources relating to the lives of workers. They should choose one source and analyse it in terms of what it tells them about everyday life in that time. Here are two useful websites:

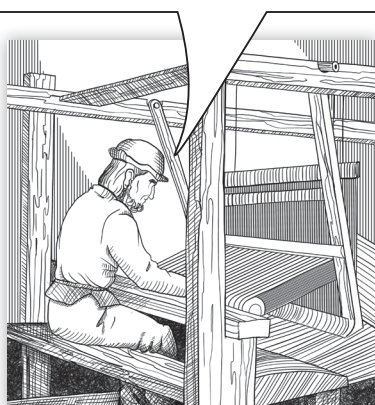

- <http://www.victorianweb.org/history/workers1.html>
- <http://www.historyteacher.net/APEuroCourse/WebLinks/WebLinks-IndustrialRevolution.htm>

Web addresses were functional at the time of publication but teachers should check them for inappropriate content and to ensure that they are still functional before use with students.

Textiles workers

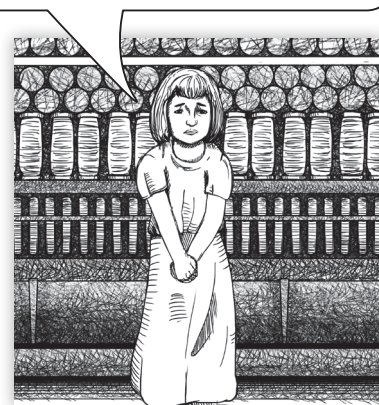

The Industrial Revolution brought many new inventions. The textiles or clothing industry was one of the first industries to use machines.

A machine has taken my job.
The Master says the machine is faster and they don't have to employ so many people. Why would they want me when they can hire some kid and pay them a quarter of the money?

Kevin T, aged 30 years, expert weaver.

I've got a job working on the machines because my family needs the money. It's long hours and I don't get paid the same as grown-ups. Sometimes I get beaten if I'm not fast enough or if I start to fall asleep.

Mary D, aged 9 years, child labourer

I was attacked by textiles workers afraid of my Flying Shuttle invention putting them out of work. A friend helped me escape from nearly being killed by the textiles workers.

John Kay, aged 40 years, inventor of the flying shuttle.
This machine allowed each weaver to make more cloth.

I'm from West Yorkshire. They call me a Luddite because I don't like the new machines. From 1811 to 1816, textiles workers like me got into gangs. We broke into factories and smashed the machines to try and save our jobs.

Victor T, aged 30 years, textiles worker

The harassment was so bad from the textiles workers that I had to move towns.

James Hargreaves, aged 35 years, inventor of the spinning jenny.
This machine spun thread faster so fewer workers were needed.

Continuity and change

 Use the Resource sheet, 'Textiles workers', to answer the questions.
Remember to answer in full sentences.

1 What is another name for the clothing industry?

2 Which two inventions allowed unskilled people to work in the textiles industry?

3 Who were the Luddites?

4 Why were these textile workers so unhappy about these new inventions?

5 Identify one positive outcome and one negative outcome of new inventions.

Positive outcome of new inventions	Negative outcome of new inventions

6 Choose one of these activities and complete it in your workbook.

- Imagine you are a weaver or spinner in the textiles industry and you have just lost your job because of the flying shuttle or the spinning jenny. Write a diary entry about this experience.
- Imagine you are a child labourer in the textiles industry. Write a letter to your parents about your daily work life.
- Imagine you are the inventor of the flying shuttle or spinning jenny. Write a letter to the editor of a newspaper to explain why factories should use these new machines.

Coal mining

 Read the information and answer the questions below.

Coal mining became more important during the Industrial Revolution, because coal was a more efficient fuel than wood. Steam engines used coal for fuel. These engines powered machines in factories, trains and steamships.

Families often worked together in a **colliery** (coal mine). Fathers and sons cut or 'hewed' the coal from the stone. Mothers and daughters carried or 'hurried' the coal through the pit.

A load of coal weighed up to 150 kg. Sometimes it was so hot and dirty in the pits that miners worked naked. In 1842, the British government passed the *Mines Act* which banned boys under the age of ten and women and girls from working underground.

Betty Harris, age 37 years, to the 1840 Royal Commission into mines

I was married at 23, and went into a colliery when I was married ... I am a drawer, and work from 6 in the morning to 6 at night. Stop about an hour at noon to eat my dinner; have bread and butter for dinner; I get no drink ... I worked at drawing when I was in the family way. I have a belt round my waist, and a chain passing between my legs, and I go on my hands and feet. The road is very steep, and we have to hold by a rope; and when there is no rope, by anything we can catch hold of ... My clothes are wet through almost all day long ... the belt and chain is worse when we are in the family way. My feller (husband) has beaten me many a time for not being ready. I were not used to it at first, and he had little patience.

Great Britain, *Parliamentary Papers*, 1842, Vol. XV, p.84

- 1 What is Betty's job called? What did her job involve?

- 2 What does Betty mean by 'the family way'? How would this affect her ability to work?

- 3 How do you think Betty's story contributed to the introduction of the Mines Act in 1842?

Factories

-  1 Write the correct term beside each definition:
apprenticeship, beggar, breadwinner, cottage industry, crippled, redundant.

Term	Definition
	Where families work together to make products
	Unable to move properly, disabled
	The main money earner of the family
	No longer needed
	Someone who asks others for money because they don't have a job
	Learning through working; paid a small wage

- 2 Use these conjunctions to complete the information: or, but, and, as, because.

The Industrial Revolution was shaped above all by the development of the factories. Before this time, many products were made in cottage industries where a family worked together to weave fabric, sew clothes or sculpt clay products. These cottage industries relied on long apprenticeships where workers slowly learned a wide range of skills _____ became masters in their area. However, new inventions meant that new products could be made quickly _____ easily, _____ cottage industries became redundant.

The factories with their new machines did not need skilled workers. Instead, factory owners hired women _____ children _____ they were cheaper to pay. Skilled men cost more _____ they were expected to earn a breadwinner's wage. Now, women _____ children often became the breadwinners in a family. _____ their lower wages meant that many families lived in poverty _____ some became beggars.

- 3 Cross out the incorrect word in each pair of brackets.

Life in the factories was difficult because:

- many overseers (beet / beat) their workers when they became sick or tired
- people could be crippled or (dye / die) if they got caught in the machinery
- workers, especially children, could be (locked / looked) up in the factory
- many worked very long hours for six or even seven days a (week / weak).

Australian and British trade unions

Trade unions are groups created by workers to help protect their working rights.

- 1 Write the missing vowels (a, e, i, o, u) to complete the information.
- 2 In your workbook, create a Venn diagram to show the similarities and differences between trade unions in Australia and Britain.

	Britain	Australia
Laws against workers and punishments	Combination Act in 1799 W_rkers could be fined or jail_d for challenging working ho_rs.	Combination _ct in 1799 (Australia followed British law.) Workers could be wh_pped and c_nvicts given longer s_ntences.
When were trade unions allowed?	1825	1824: the Br_tish g_overnment allowed unions in col_nies.
What were the first trade unions?	Grand National Consolidated Trades Union created by Robert Owen (a mill own_r) in th_ 1830s; failed after s_x months	Compositors Uni_n (Printers Union) _n the 1840s
Trade unions lead changes to working hours	T_n hour working d_y for w_men in 1847, men followed soon aft_r	E_ght h_ur working day _n 1856
Who was not in trade unions? Why?	Women: not as important as men Childr_n: n_t as important as _dults	Wom_n: not as important as m_n Chinese: seen as l_ss imp_rtant than white p_ople
How were workers seen?	Good if they fitted in and d_d what th_y were told. If not, they could be transported to Australia.	Really l_cky – often paid good wag_s and there were many j_bs.
Political power of trade unions	In th_ 1850s, Chartists tried to get v_ting rights for workers. Many were tr_nsported to Australia as c_nvicts for this.	Eureka Rebellion for r_ghts in 1854. By 1856, many rights were granted including m_le suffrage. Labor Party st_rted in the 1890s to pr_tect worker's rights.

Objectives

- Learn about new developments in transport
- Explore how new transportation affected the movement of people
- Understand why people moved to Australia

Prior knowledge

Students should have a basic knowledge of the Industrial Revolution.

Background

In 1710, Thomas Newcomen constructed a steam engine that generated vertical energy (up and down movement). Newcomen used this engine to make pumps for deep pit mining to prevent flooding. In 1764, James Watt realised that he could use Thomas Newcomen's ideas to construct a steam engine that used rotary motion (circular motion). This meant that different types of machines and transport could be invented. George Stephenson used James Watt's rotary steam engine as a source of energy for the first steam train. This steam engine was also used in other forms of transport such as steamships.

In 1770, James Cook went looking for the mysterious southern land. He confirmed sightings of Australia and New Zealand. Britain used Australia in particular as a convict settlement from 1788. Australia gradually shifted from a country of punishment to a country of opportunity as settlers arrived and took up pastoral land. These new settlers objected to the convicts and in 1840, New South Wales banned transportation. However, transportation to Australia only ended in 1868 when Western Australia received a final ship of convicts. Western Australia continued to be a penal settlement for some time after 1868, but received no further transports.

Starter activity

Discuss the modes of transport that students use. How does transport technology influence their everyday interactions with people and the places they go? How would their lives be affected if walking was their only mode of transport?

Interesting fact: Improvements in transportation in the Victorian period (1800s) moved the average distance of spouses from about 5 km away to 30 km away, as people no longer had to rely on walking to meet and woo someone.

Resource and Activity sheets

The Activity sheet, 'Transportation', identifies the improvements in transport in the 1800s with an emphasis on the railway system.

The Activity sheet, 'Railways in England and Australia', compares the development of railway systems in these countries. Students copy and complete comprehension questions for each section.

Through the Activity sheet, 'Clippers and steamships', students explore the realities of ship travel. They also consider how they would feel, experiencing that journey.

The Activity sheet, 'Convicts and crime', explores the reasons for transportation to Australia, and the perspectives of different groups of people.

On the Activity sheet, 'Settlers in Australia', students consider different reasons for moving to Australia. Guide the class through analysing the primary source emigration poster through CHIPS:

- caption (What words are there on the poster? Why are they used?)
- history (What events were happening then?)
- interrogate source (What do you find interesting or unusual about the poster?)
- people (What people and animals are included? How are they represented?)
- symbols (What signs or symbols are used? How do these persuade and encourage people?).

Extension ideas

- Students could visit the website 'Convict Records' to explore the different reasons people were transported to Australia and the lengths of their sentences. Have them compare and contrast three different convicts.
<http://www.convictrecords.com.au/crimes>
- Students could also use the Victorian Railway website to chart the development of steam trains in Victoria from the 1850s to the 1900s.
<https://museumvictoria.com.au/railways/theme.aspx?theme=448&lvl=1>

Web addresses were functional at the time of publication but teachers should check them for inappropriate content and to ensure that they are still functional before use with students.

Transportation

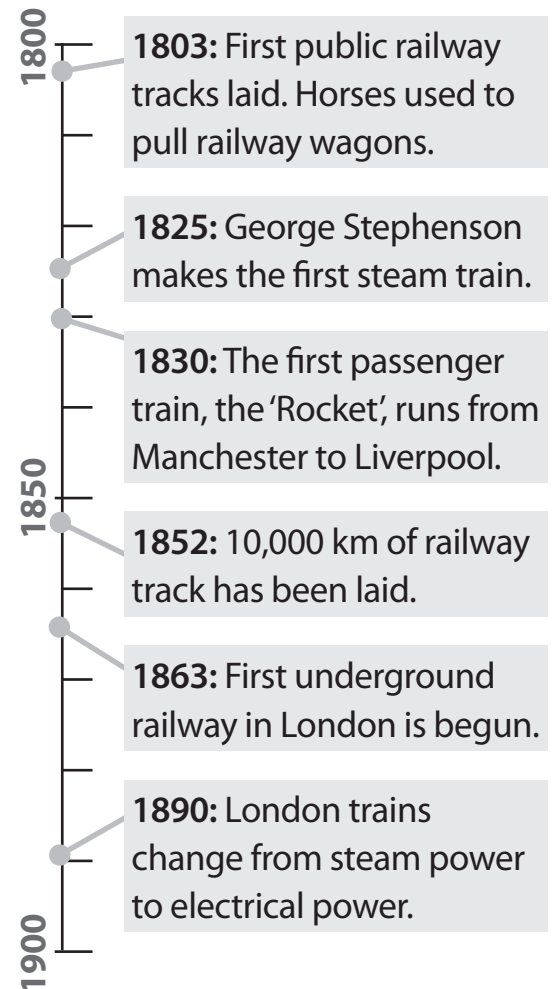

Before the Industrial Revolution, most products were made and used locally. But after factories were built, business owners often got raw materials from the colonies because it was cheaper. They also sent their finished products further away to increase their profits.

For transport, people could use either boats or horses and carts. This limited the distances they could travel and it was expensive. However, in the 1700s and 1800s transport changed.

Improvements in transport in the 1700s and 1800s

- Road users paid turnpike tolls. The local authorities used this money to maintain and improve the roads so that people could travel faster.
- From the mid-1700s, canals (inland waterways for boats) were built. This made it easier to get products onto boats and then around the country.
- Railway tracks were laid, and horses were used to pull wagons along them. Now, heavy raw materials and products could be moved along regular routes; for example, from a coal mine to a port.

Transport timeline

- 1 How did people move products before trains were invented?

- 2 Why did people need better transport during the Industrial Revolution?

- 3 Who invented the steam train? _____
- 4 Which event in the transport timeline do you think is the most important? Explain why.

Railways in England and Australia

 Copy and complete the sentences in the right column in your workbook.

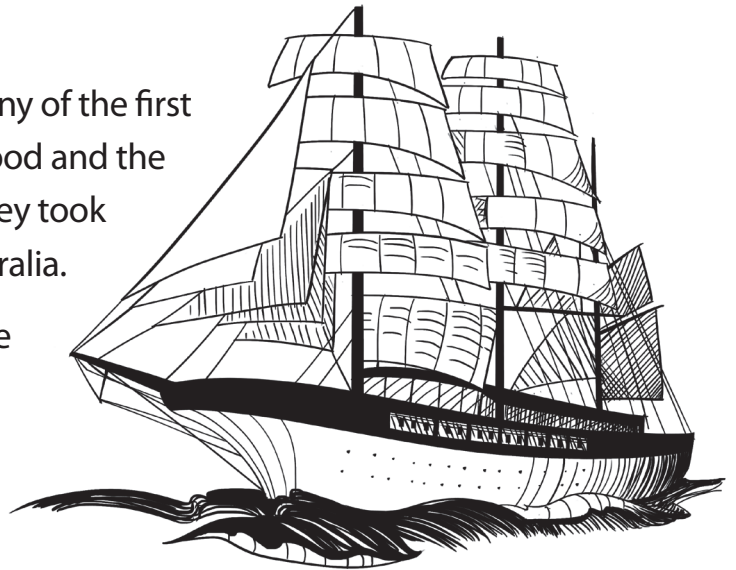

George Stephenson invented the steam train. He built two famous trains: 'Locomotion No. 1' in 1825 and the 'Rocket' in 1830. Other railway companies also built tracks and trains.	1 George Stephenson built ____ which were important because ____.
New railway companies kept changing and improving the design of the steam train.	2 One advantage of there being more than one railway company is ____.
However, many of the new companies used railway tracks of different sizes for their trains. The distance between railway tracks is called the gauge . Trains had to match the gauge of the railway tracks in order to use them. This meant that when a train made for one gauge reached a different gauge, everything had to be unloaded and put on a different train that fitted the new gauge.	3 'Gauge' means ____. 4 When a train fitting one gauge reached a track with a different gauge, ____.
When railways were built in Australia, different colonies used different gauges. • Queensland, Western Australia, Tasmania and parts of South Australia used a narrow gauge: 1067 mm. • Victoria and other parts of South Australia used the Irish gauge: 1600 mm. • New South Wales used the European gauge: 1435 mm.	5 The gauge used in New South Wales was called ____ and was ____ wide. 6 The gauge used in South Australia was called ____ and was ____ wide.
Britain standardised their gauges in the 1890s. This meant that all trains could use the same railway tracks. Australia became one country in 1901, but continued to use different track gauges until the 1990s.	7 One similarity between the railway systems of Britain and Australia is ____. 8 One difference is ____.

Clippers and steamships

Clippers 1840s–1850s

This is a clipper, like the ones that brought many of the first Europeans to Australia. They were made of wood and the wind moved them swiftly across the water. They took two to four months to sail from Britain to Australia.

The poorest people travelled in steerage at the bottom of the ship. There was only one large room for all the steerage passengers. During storms, they had to stay in the dark because candles or lanterns might set the ship on fire. Water often leaked in through the sides of the ship so everything was wet. They slept in narrow wooden bunk beds and kept their possessions in large wooden trunks to keep them safe.

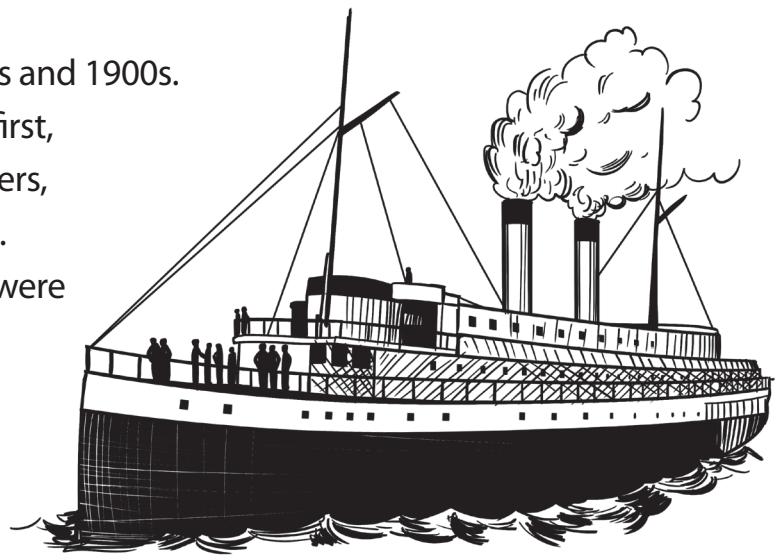

Steamships 1890s–1900s

Steamships like this were used in the 1890s and 1900s. They were powered by steam engines. At first, these ships weren't much faster than clippers, but they were safer and more comfortable. Rich passengers travelled in cabins. There were restaurants and areas where passengers could read, play table tennis and hold concerts.

The poorest people travelled in steerage at the bottom of the ship.

But steamships had more than one room in steerage. Each family had their own small cabin. Sometimes the cabins had a wash basin and a chest of drawers to help store their possessions. They could use lanterns or, later, electrical lights, even during storms.

 In your workbook, write a diary entry about travelling to Australia in either an 1840s clipper or an 1890s steamship.

Convicts and crime

Crime rates increased during the industrial period because people moved from the country to the cities and could not find work.

The prisons in Britain became overcrowded. They could no longer send convicts to America, so the government decided to transport them to Australia. From 1788 to 1868, British criminals were often sent to Australia to serve their sentences.

Crimes punished by transportation to Australia

- * Being in the company of criminals - Life imprisonment
- * Bigamy (married to two people at the same time) - 7 years
- * Pickpocketing (stealing a small amount) - 7 years
- * Vagrancy (being homeless) - 7 years
- * Theft of a handkerchief - 7 years
- * Murder - Life imprisonment

 **1** How do you think each of these groups felt about criminals being transported to Australia? Explain your answers.

- Rich British people _____

- Poor British people _____

- Indigenous Australian peoples _____

2 How do you feel about transportation as a punishment? Explain your answer.

Settlers in Australia

Settlers had many different reasons for moving to Australia in the 1800s.

- To be near relatives who were convicts
- To experience an exotic climate
- For a 'new life'
- To find a job
- For the gold rush, 1850s and 1860s
- To find a husband
- To live in a country described as a paradise for workers, as Australia was in the 1850s to 1890s
- To escape family shame; for example, if someone was seen as the 'black sheep' of the family, they might be 'sent away' to Australia.

Britain and Australia had migration schemes to help people pay for the trip from Britain to Australia. This meant even poor people could afford to travel.

 Follow the CHIPS method outlined below to analyse this poster. Write your responses in your workbook.

Captions – What words are used? Why?

History – What events were happening then?

Interrogate source – What do you find interesting about the poster?

People – What people and animals are shown? How are they represented?

Symbols – What signs and symbols are used? How do they persuade people?

Extra activity: Design your own immigration poster. It could be aimed at immigrants today, or in the 1800s or 1900s.

'Australia: the land of sunshine, health & prosperity', 1914, PIC Poster Drawer 286/nla.obj-153508575, National Library of Australia.

Objectives

- Understand how the use of geographical regions changed over time
- Consider how land was used by different people and how that use affected population movements
- Analyse images to improve understanding of the historical time period

Prior knowledge

Students should have a basic knowledge of the Industrial Revolution.

Background

Before the Industrial Revolution, land was used the same way for centuries. During the Medieval period, farming land was organised by the village. They distributed land to the farmers and rotated it regularly so that people were not stuck with poor farm land all the time. In order to keep the land fertile, medieval farmers used the three-field system. This involved ploughing two fields and leaving one field fallow (unused) and then rotating fields each year for three years.

During the Industrial Revolution, farming changed dramatically. New machinery meant less human labour was needed. The land was also fenced in due to 'enclosure laws'. This meant that the village no longer shared and rotated the land used by the farmers in the area. Instead, fields were owned by individuals. The owners of the rich, fertile fields grew richer and could buy more land. The owners of arid or infertile land became poorer. Many had to leave when they could no longer afford to own land.

Some people chose to move to Australia as settlers. Others were transported to Australia for committing crimes. Some of these crimes, such as 'being homeless' and 'associating with bad people', are not what we consider to be crimes today.

Australia was a land rapidly changing from the natural to the developed as settlers took land from the Indigenous Australian peoples. They built cities and towns on the sites of regular Indigenous Australian camping locations. The names of the colonies of Australia changed regularly, reflecting these changing stages:

- Indigenous Australian peoples and their culture

- penal colonies
 - a nation of bush people with the first European settlers
 - a place of impossible riches with the gold rush
 - a working man's paradise for the new working class
 - a federated country
- all within the industrial period.

Starter activity

Discuss how we use land today; for example, 'McMansions', living in capital cities, multistorey apartment buildings. Then consider how land was used 100 or 200 years ago; for example, smaller houses for larger families with gardens to grow food, more people living in rural areas. As a class, make a Venn diagram to show the similarities and differences.

Resource and Activity sheets

On the Activity sheet, 'Advances in agriculture', students complete a cloze activity to find out how the Industrial Revolution impacted on agricultural life.

To complete the Activity sheet, 'Country or city', students consider why people moved between the city and the country, and the advantages and disadvantages of each lifestyle.

The Resource sheet, 'The Pioneer', has an image of Frederick McCubbin's famous painting. Students use this image to complete the Activity sheet, 'Landscapes of Australia'. Through analysing this painting they explore the changing view of Victoria from first settlement to a generation later.

The Activity sheet, 'Changing Australia', uses maps of Australia and its various colonies, states and territories to look at how European settlement of Australia changed over time.

Extension activities

Provide maps, posters, paintings or photographs of your town or city from different time periods; for example, now, 50 years ago, 100 years ago and 150 years ago. Websites such as <http://trove.nla.gov.au>, state libraries and local history groups may be useful in sourcing these images.

Discuss with the class the changes over time shown by the images.

Web addresses were functional at the time of publication but teachers should check them for inappropriate content and to ensure that they are still functional before use with students.

Advances in agriculture

Use the word banks to fill in the missing words.

Word bank

- barley
- crops
- harvesting
- rotated
- same
- seasons
- three-field

Farming remained the _____ for a long time. Most people lived on farms. They grew _____ to feed themselves, and had only a little extra to sell. They followed the rhythms of the day and the _____ : working during daylight and busy during planting and _____, but slow the rest of the year. To keep the land fertile, people followed a _____ - _____ rotation system. In this system, they grew crops such as wheat and _____ on two fields and left the third field unused. Then they _____ the fields.

Word bank

- landlords
- Enclosure
- fenced
- tenant farmers
- changed

Rural life _____ in the 1700s when the government introduced _____ Acts. This meant all the land had to be _____ in. Rich _____ could afford to build fences and soon owned about three quarters of the land. They rented it to farmers who could not afford their own land. These _____ often struggled to pay their rent and feed their families.

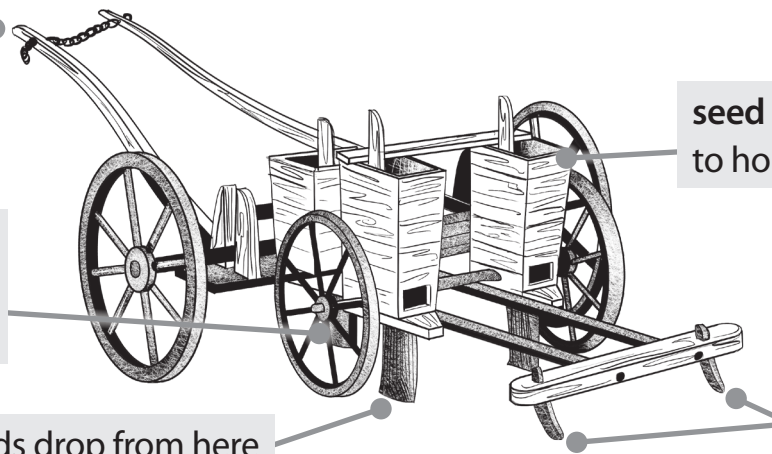

handle: to push the seed drill

teeth: cover the planted seeds with soil

seed tubes: the seeds drop from here

seed boxes: to hold seeds

furrow openers: dig a narrow trench for seeds

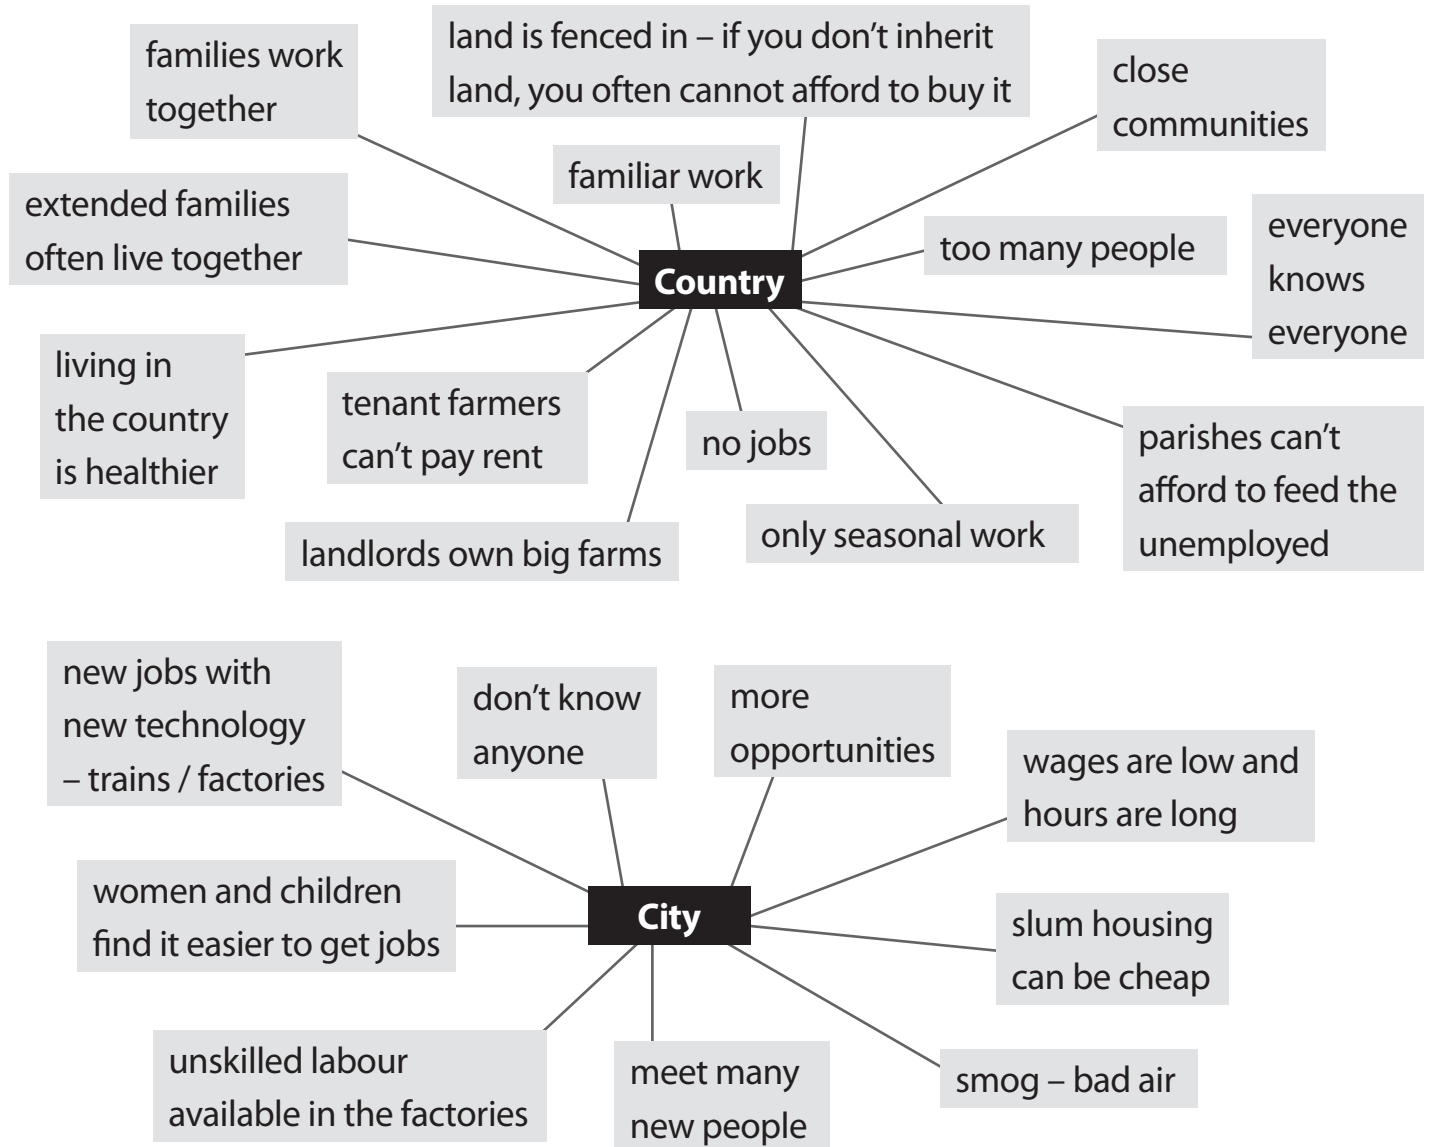

Word bank

- fertile
- four-field
- inventions
- root vegetables
- Seed Drill
- stock

Charles Townshend, an English viscount who studied agriculture in Holland, suggested that moving to a _____ - _____ rotation system of wheat, _____, barley and clover would be profitable and help keep the fields _____. Growing root vegetables helped to improve people's diets and keep _____ alive during winter. Some _____ made farming easier too. In 1701, Jethro Tull invented the _____. This meant that people did not have to plant by hand.

Country or city

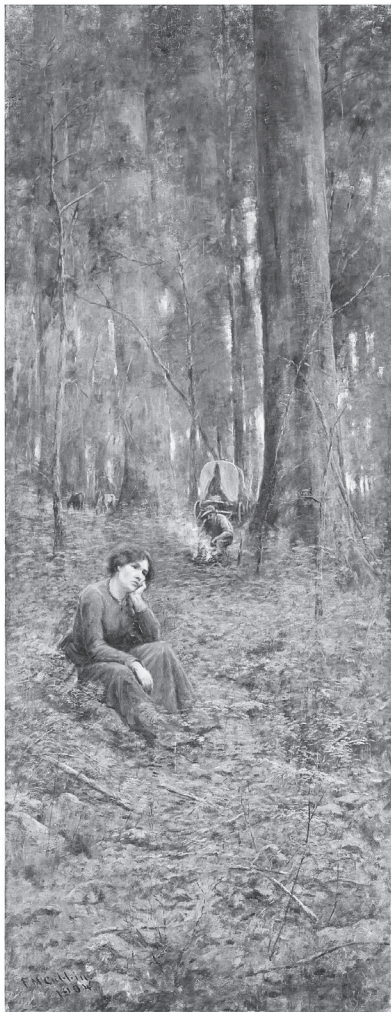

Use the mind maps about the country and the city to complete the following activities.

- 1 Tick the points in the mind maps that you think are **positive**.
Put a cross beside the points that you think are **negative**.
- 2 Where would you prefer to live during the Industrial Revolution – the city or the country? Explain your answer.

The Pioneer

The Pioneer by Frederick McCubbin is a triptych, which means a picture painted on three panels. It shows the life of the pioneer family, or new settlers, in Australia. It was painted in 1904 in Mount Macedon, Victoria.

The Pioneer, 1904, oil on canvas (triptych), 223.5 x 86 cm; 224.7 x 122.5 cm; 223.5 x 85.7 cm, Collection: National Gallery of Victoria, Felton Bequest 1906.

Landscapes of Australia

 Use the Resource sheet, 'The Pioneer', to complete the following activities.

1 What is the landscape like? Describe the features shown in each panel of the triptych.

First panel	Second panel	Third panel

2 What changes over time do you see?

3 What do you think Frederick McCubbin is saying about the Australian landscape?

4 What are the people like? Describe the people shown in each panel.

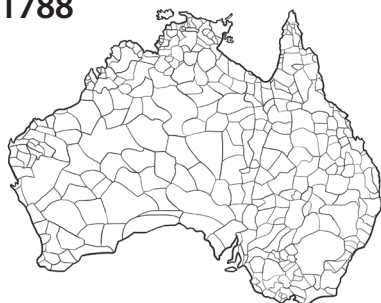

First panel	Second panel	Third panel

5 What changes over time do you see?

6 What do you think Frederick McCubbin is saying about pioneers in Australia?

Changing Australia

Indigenous Australian language groups before 1788

Note: indicative map only

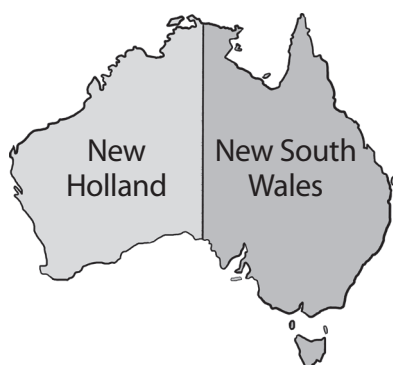

Indigenous peoples have lived in Australia for thousands of years. Before 1788, there were many different groups with their own languages, laws and beliefs. These groups established their own territories.

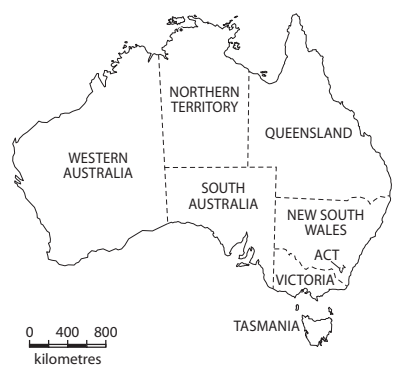

In 1788, the first British convicts were sent to Australia with the First Fleet. Australia was divided into two parts: the British colony of New South Wales in the east and the Dutch colony of New Holland in the west.

Over time, Australia was divided into colonies that had their own governments. In 1901, Australia became one federated country. The colonies became the states and territories we recognise today: Victoria, New South Wales, South Australia, Western Australia, Queensland, Tasmania Northern Territory (separated from South Australia in 1911) and the Australian Capital Territory (established in 1911).

Australia, 1788

Australia, 1911

1 What was Australia like before 1788?

2 How was Australia different after 1788?

3 How did Australia change after 1901?

Objectives

- Gain a stronger understanding of the position of women during the Industrial Revolution
- Learn about female writers and how they influenced women's rights
- Learn about a female inventor and consider her role in the Industrial Revolution

Prior knowledge

Students should have a basic knowledge of the Industrial Revolution.

Background

Women had long been seen as inferior to men. This was reinforced by the Catholic and later Protestant churches who held to the idea of all women being tainted by the 'sins of Eve'. Women were generally prejudiced against, treated almost as children and forced to work largely within the household. The few women who could express themselves through culture, literature or politics have often been misrepresented or ignored by history. It is important to remember that the absence of women's writing or cultural activities does not mean that women were not engaging in these activities. Rather, women's activities were devalued, there were more restrictions on their involvement in such activities, and little effort made to preserve them.

Issues such as marriage and divorce were highly significant for women. Once married, many women's rights to property and possessions passed to their husbands. Married women could engage in few activities without their husband's support or presence.

In the 19th century, divorce laws were finally introduced in Britain and its colonies, including Australia. However, women were still prejudiced against in the causes for divorce. In the late 19th century, women challenged this inequality by seeking political representation through the vote (suffrage) and the right to be members of parliament. These women were called suffragettes or suffragists.

Starter activity

Talk to students about voting. You may want to discuss a recent election. Discuss why we vote and what impact it could have if groups in society were not allowed to vote.

Resource and Activity sheets

The first two activity sheets look at suffragettes and their fight for the right of women to vote. The Activity sheet, 'British suffragettes', considers what women had to do to get the vote. The Activity sheet, 'Australian suffragettes', looks at when women obtained the right to vote in Australia.

The Activity sheet, 'Marriage and divorce laws', explores the idea of allowed causes of divorces, and how this has changed over time. 'Aggravated adultery' meant that the husband had to be highly obvious about his adultery, or combine it with physical cruelty, two years' desertion, bigamy, sodomy, bestiality, incest or rape in order to be divorced. Women could be divorced for a single act of adultery.

In the Activity sheet, 'Writing women', students learn about two significant female writers who championed equality in the 1800s.

The Activity sheet, 'Caroline Chisholm', provides in-depth information about Caroline Chisholm's philanthropy in Australia.

Extension ideas

Watch one of the movie adaptations of Charlotte Bronte's *Jane Eyre* to broaden the students' understanding of women's lives in the 1840s. The main character, Jane, was middle class. The way she was treated by servants and by the upper class (with the exception of how she is sometimes treated by Mr Rochester) fits with the experiences many middle class women would have at the time.

British suffragettes

 Read the information and answer the questions below.

Suffrage means the right to vote. In Britain in the 1700s and 1800s, only rich men who owned property were allowed to vote.

In the late 1800s, many women started to protest. They wanted to vote and they wanted more rights. These women were called **suffragettes**.

Many men and some women thought that suffragettes should not have the vote. They mocked these women in the newspapers by describing them as silly or masculine. Suffragettes were sentenced to prison for protesting. Many went on hunger strikes; the jailers would tie them down and push tubes down their throats to force-feed them.

During World War I, a lot of British suffragettes stopped protesting to support the war effort. Many historians believe this patriotism is why women over 30 years were given the right to vote in 1918. In 1928, the voting age for women was reduced to 21 years, as it was for men. Finally, women had equal suffrage.

Ways that suffragettes protested

- Letter-writing campaigns
- Protest marches
- Signing petitions
- Learning jujitsu so they could protect themselves
- Breaking windows
- Standing on street corners and preaching to the crowds
- Chaining themselves to railings
- Hunger strikes in prison
- Emily Davison ran in front of King George V's horse at a horse race in 1913 and was killed.

1 How would you have protested if you were a suffragette? Explain why.

2 Write two questions you still have about this period in history. Use question words like who, what, where, when, how and why.

3 Choose one of your questions and research it using your textbook, the internet or your library. Answer the question in your workbook.

Australian suffragettes

In 1893, New Zealand became the first country in the world to allow women to vote in political elections. With the *Commonwealth Franchise Act* in 1902, Australia became the first country to allow women to vote *and* be represented in Parliament.

	Colonies right to vote in colony elections (pre-1900)	Federal elections (Australian elections)	State elections (post-1900)
VIC	1863–1864: Victorian government accidentally allowed women ratepayers to vote. In 1864 they took the right away.	1902	1908 (given) 1911 (used)
SA	1895 (included Indigenous Australian women)	1902: Indigenous Australians could no longer vote.	1895
WA	1899	1902	1899
QLD	n/a	1902	1905
NT	1895 (Northern Territory was ruled by South Australia then.)	1902	1895
TAS	n/a	1902	1903
NSW	n/a	1902	1902

-  **1** Compare two different states or territories. Write a short paragraph about the similarities and differences.

- 2** Complete this sentence: The *Australian Commonwealth Franchise Act* of 1902 meant that

Marriage and divorce laws

For many years, married couples found it almost impossible to legally separate unless they were incredibly rich and could convince the government to allow them to do so. In 1857, Britain finally allowed divorces for two causes: adultery committed by the wife and aggravated adultery committed by the husband. The colonies of Australia were allowed to form their own divorce laws.

Allowed causes of divorce	Britain	SA	TAS	VIC	WA	NSW	QLD
Adultery by woman, Aggravated adultery by man	1857	1858	1860	1861	1863	1873	1864
Desertion (leaving your partner)	1937 (3 yrs)	1928 (5 yrs)	1919 (w: 2 yrs) (m: 4 yrs)	1889 (3 yrs)	1911 (5 yrs)	1892 (3 yrs)	1922 (5 yrs)
Drunkard / murder or attempted murder	--	1928	1919	1889	1911	--	1892

 **1** Was it easier for men to get divorced or for women? Explain your answer.

2 In 1905 Catherine Labudda ran away from her husband, William Dean, in Victoria. She deserted him to live with Gregory Lewis in Tasmania.

a How long would William Dean have to wait for a divorce? _____

b What year could they get divorced? _____

3 What do you think about these causes for divorce? Do you think they are fair? Explain your answer.

Writing women

Women were expected to act in particular ways: be domestic, stay at home, let men make their decisions and above all to be mothers and wives, not doctors or lawyers. In the 1800s, some writers began exploring the idea of women being equal with men.

English author Charlotte Bronte wrote *Jane Eyre*. This is a story about a poor governess who lived in England in 1847. Originally, Charlotte used the male pen-name Currer Bell because she was thought no-one would publish a book written by a woman.

Australian author Henrietta Dugdale was a suffragette, which means a woman who wants the right to vote. Her book *A few hours in a far-off age* written in 1883 explored the idea of an equal future.

Do you think I am ... a machine without feelings? ... Do you think, because I am poor, obscure, plain, and little, I am soulless and heartless? You think wrong! ... [you and I are] ... equal, – as we are!

Charlotte Bronte, *Jane Eyre*

When they acknowledged ... that women were also *humans*, and not of a lower species ... more talented people were born to bless humankind.

Henrietta Dugdale,
A few hours in a far-off age

- 1 Write these words beside the correct definition: acknowledged, lower species, machine, obscure, plain.
 - a _____ : simple, basic
 - b _____ : without personality, not human
 - c _____ : lesser animal, one that can be mistreated
 - d _____ : hidden, not out in the open
 - e _____ : recognised as being important
- 2 What tells you that Jane in Charlotte Bronte's *Jane Eyre* thinks that men and women are the same? _____
- 3 In Henrietta Dugdale's *A few hours in a far-off age*, she says women were seen as 'a lower species'. What happened once that changed?

- 4 Why is equality between men and women important?

Caroline Chisholm

My name is Caroline Chisholm. I was born in 1808 in England. From a very early age I cared about being a philanthropist. A philanthropist is someone who helps people who are poor or uncared for. I only married my husband Captain Archibald Chisholm because he allowed me to be a philanthropist and help others.

In 1838, my husband and I moved to Sydney, Australia. There were many people who travelled to Australia but then had nowhere to go. I focused on helping poor immigrant girls. Many arrived with little money and there were not many respectable or safe places for them to stay.

With the help of Governor and Lady Gipps, I started a Female Immigrants Home. We could house ninety-six women. We also had an employment agency to help the women find jobs so they could support themselves.

I supported families in moving to Australia and cared about the position of women and children when others did not. Later, I supported universal suffrage, the idea that every person deserves the right to vote and to be represented by their government.

1 Write three interesting things about Caroline Chisholm's life.

- _____
- _____
- _____

2 Think of a strong woman you know who cares for people like Caroline Chisholm did. This could be a family member, friend, historical figure or celebrity. Explain why you admire them.

Objectives

- Understand the social concept of masculinity
- Identify how the position of men changed during the Industrial Revolution
- Consider the importance of all men having the right to vote

Prior knowledge

Students should have a basic knowledge of the Industrial Revolution. They will benefit from knowing what suffrage is and who suffragettes were.

Background

The position of men in society underwent significant changes during the Industrial Revolution. Previously, a man was unquestionably the head of his household. Often all members of a family worked, but it was the man's skilled labour that brought in the most money. With the move from skilled labour to mechanisation brought by the Industrial Revolution, skilled males became less valuable. Factory owners wanted cheap labourers to work with the machines in their factories. Women and children were cheaper than men, so were hired more often. An increasing number of fit and able men became subject to the Poor Law restrictions because they were could not find jobs to support their families.

The Chartist movements in Britain (1838–1858) brought about discussions of universal male suffrage. People no longer believed that only rich men who owned property deserved the right to vote and be represented in parliament. In the late 19th century, there was also the suffragette movement pushing for women to have the vote. This also challenged the male social identity as the dominant, intelligent, knowledgeable gender. The conflict between the traditional idea of the strong man and the actual social reality was problematic for many men.

Starter activity

Present the following wage information to the class.

- Men usually earned 10–15 shillings a week
- Women usually earned 5 shillings a week
- Children usually earned 1 shilling a week

Have the students consider which worker would be seen as more valuable in these situations:

- A factory owner who is keen to spend no more than 100 shillings a week staffing his factory.
- A family (mother, father and three children) who need to pay rent at approximately 5 shillings a month.

Discuss the conflict between the needs of families and the needs of factory owners.

Resource and Activity sheets

The Activity sheet, 'The Poor Laws', explores changes in the way that poor people were provided for. Students copy and complete comprehension questions for each section.

The Resource sheet, 'Society's expectations', identifies differences between social expectations of men and the reality of men's experiences. Students use this information to complete the Activity sheet, 'Expectations versus reality', by writing third person and first person perspectives on how men lived.

The Resource sheet, 'Chartists', discusses the movement that pushed for all men, including those who were poor, to have a say in how the country was governed. On the Activity sheet, 'Questioning voting', students are guided through the process of writing complex questions about the Chartist movement. Then they choose one of these questions to answer.

Extension activities

Have students research a famous Australian man who lived in the 1800s. Suggestions: Henry Lawson, Barcroft Henry Boake, Ned Kelly, Frederick McCubbin, Banjo Patterson, Edmund Barton, Alfred Deakin.

Ask students to identify the ways this man fits what society expected of men at the time; for example, being the breadwinner, heterosexual, head of the house, married, strong and emotionless. Also identify the ways in which he did not fit this expected role; for example, being homosexual, intellectual, a carer, emotional or supported financially by a partner.

The Poor Laws

 Copy and complete the sentences in the right column in your workbook.

In Britain in the 1600s and 1700s there was no Centrelink to help unemployed or disabled people. Instead, they had the Poor Laws to look after people in the community who were struggling.	1 Today we have ____ to help ____. 2 In the 1600s and 1700s, they had ____ to help ____.
The Poor Laws meant that each church parish was responsible for looking after unemployed or sick people within its community. Richer people in the parish had to donate money to help the needy.	3 In the 1600s and 1700s, each church parish had to ____.
Before the Poor Laws, many poor people were punished by being put in stocks or whipped, just because they were poor. It didn't matter if they had no choice about being unemployed.	4 The Poor Laws meant that poor people were no longer ____.
In 1834, the government made a new Poor Law to get poor people off the streets. They were put into places called workhouses. The people who set up the workhouses deliberately made them extremely harsh places to be. This meant that only the most desperate poor people would go there.	5 Workhouses were introduced in ____. 6 The people who set up the workhouses only wanted the most desperate poor people to go there because ____.
In the workhouses, families were separated. There were different spaces for men, women and children. They were given little food and had to work long hours on tasks that gave them no useful skills. They often wore prison-style uniforms and were locked away behind big walls. Some people described it as being like a prison for poor people.	7 The three worst things about workhouses were ____.

Society's expectations

The Industrial Revolution was a time of significant change for men. Some men became powerful with the development of factories. But in many ways, the traditional ideas about men and masculinity were challenged by the new ideas and practices of the Industrial Revolution.

Society's expectations of men	Reality for men
• Be the breadwinner • Be the only worker outside the house • Support his family	Many lower class men were unemployed because their wages were too expensive, compared to women's and children's wages. Women and children often became family breadwinners.
• Head of the household • In charge of everything that happens • Make all the decisions	Many women were the family breadwinners. This gave them more decision-making power. The suffragette movement pushing for women to have the vote threatened the position of men as head of the household.
• Handle all situations with strength, showing no emotion	Men were expected to show no emotion, even though they had feelings like everyone else. This made them feel distant from their families because they couldn't be honest with them about the problems they had.
• Heterosexual • All serious and responsible men are married	There had always been homosexuals in society. But in the 1800s, social change led to a growing awareness of homosexuality which only increased as more men and women expressed their true preferences. Homosexuality was against the law in many countries at the time.
• Physically strong • Always stronger than women and children	Many physically strong, lower class men were unemployed. Therefore, their physical strength was not so valuable. Many middle class men worked in businesses where they did little physical labour. This did not fit with society's expectation that they be physically strong.

Expectations versus reality

 Use the Resource sheet, 'Society's expectations', to help you complete the questions.

- 1 Read the character profile of Rupert Giles. Write about his life from a third person perspective, focusing on how he meets society's expectations. Highlight three expectations on the Resource sheet to help you.

Hint: Third person perspective means using proper nouns such as Rupert and Mr Giles and pronouns such as *his, he, him* (**not** *I* or *you*).

Character profile

Name: Rupert Giles

Age: 40 years

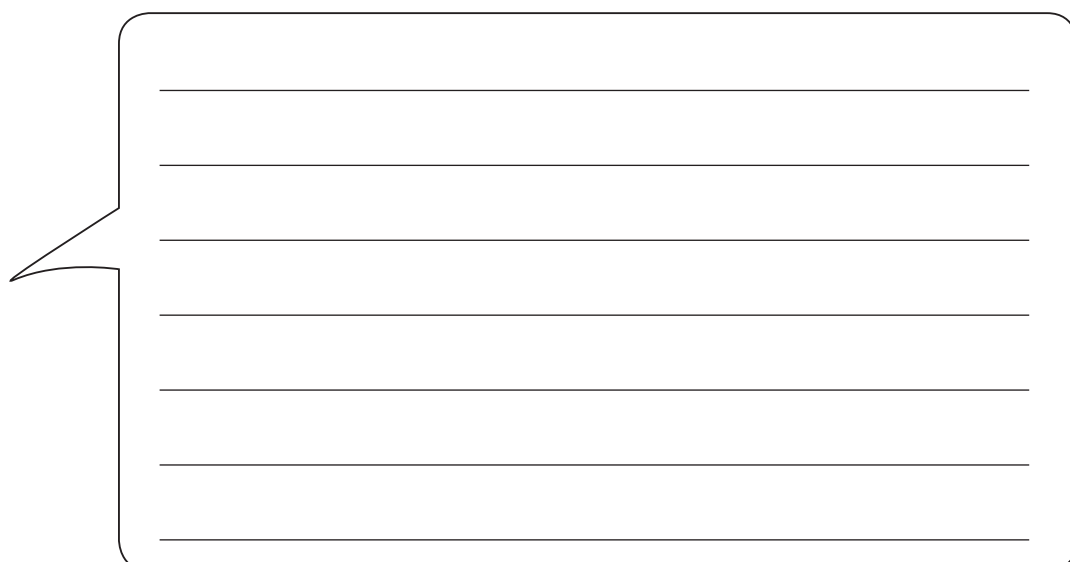

Occupation: Bank manager

Family:

- married to Mary Eleanor Giles
- two children, Seth and Alison

Background: His wife is a suffragette and he might lose his job soon.

- 2 Draw a picture of a man in Rupert's time, and use the speech bubble to write about the difficult realities men faced. Use first person perspective. This means you write as if you are the man, speaking. Use pronouns like *I, me* and *mine*. For example: *What will happen if I lose my job? How do I feel about my wife being a suffragette?*

Chartists

The Chartist movement was a group of men, mostly working class, who wanted to change how the British government worked. But since they could not vote in elections, how could they change the government? Rich men who owned property could vote. They were usually from noble families. Poor men, women and children could not vote.

In 1838, the Chartists created a 'People's Charter' to identify the rights they wanted.

Rights from the People's Charter

- Full male suffrage – all males vote, whether they own property or not.
- Secret ballot – people vote secretly so government ministers can't mistreat people who didn't vote for them.
- Pay for parliamentarians, so poor people can afford to be parliamentarians too.
- Equal-size electorates – one small district should not have more power than a large district.
- Annual elections – people can change leaders each year if they aren't looking after the interests of the country.

Most Chartists were working class people. They were unhappy about doing all the work, but not having a voice in how the country was governed. They signed petitions, organised strikes and held protest marches.

In the 1840s, the British government brought in soldiers to stop the movement. At least 60 Chartist leaders were arrested and transported to Australia. Later, some of these men became involved in the Eureka Rebellion in 1854 in Ballarat, Australia, working for the same rights they fought for as Chartists.

Only responsible people like me should be able to vote. The poor people do not have enough education to know what is best for our country. If they only worked hard enough to make money like I did then they would deserve to vote too. But they don't.

It is not fair. I work hard my whole life and nobody ever listens to me. Politicians only think about themselves and their rich friends. They do not think about me and my family. Just because I am poor does not mean that I do not have ideas or needs.

Questioning voting

Use the Resource sheet, 'Chartists', to help you complete the questions.

Question words	who, what, where, when, why, how
Keywords	significance, context, perspective, causes, consequences, continuity, change, beliefs, values, interpretations, impact, role
Task words	ask, consider, explain, analyse, compare, contrast, discuss, justify, explore, construct an argument, do you agree?
Content words	Specific focus. For example: Chartists, voting, suffrage, equality
Situation words	Specific time period studied. For example: Industrial Revolution, Victorian period, early modern period, 1800s, 19th century

- Write a complex question that uses a word from at least four of the five sections in the table above. Hint: You do not have to follow the order shown in the example. Move the words around or change them until your question sounds right.

Example:

Question word Keyword Content word Situation words Task word
 What role did the Chartist movement play in the Industrial Revolution? Discuss.

Question 1 _____

Question 2 _____

- Ask a teacher or friend to help you check and edit the questions you wrote.
- Answer one of your questions in your workbook. In your answer, highlight the keywords, content words and situation words from your question to show that you are answering it.

Objectives

- Understand the unique perspective of children during the Industrial Revolution
- Consider different perspectives on the same situation
- Use empathy to help create a narrative that demonstrates historical knowledge

Prior knowledge

Students should have a basic knowledge of the Industrial Revolution. An understanding of the factory system may be useful for understanding child labour.

Background

The position of children in Victorian society changed over time. At first, they were often seen as additional labour within the family. Most people lived on farms and having many children who could all work was valuable. However, there was less need for large families as people moved away from farms or became tenant farmers. At the time, people could not plan or restrict pregnancies so the population continued to grow. From a young age, children were often employed in factories or mines to supplement their parents' wages. Sometimes it was easier for children to get jobs because they were cheaper to hire.

When parents were employed and children weren't, there were concerns about who would look after the children. Some families could rely on relatives or friends. However, many children were left to fend for themselves during the day, or at night if their parents worked night shifts.

Governments in Britain and Australia decided that education might prevent these independent and unmonitored children from joining criminal gangs. They began developing education departments and systems to meet this need.

Starter activity

Watch the documentary *The Children who built Victorian Britain*, BBC, 2007. It has good descriptions of the experiences of children during the Industrial Revolution. It's great to watch by itself or you could pause it at regular intervals for students to take notes.

Resource and Activity sheets

The Activity sheet, 'Education', looks at the introduction of the education system in Australia and Britain. Students complete the information by crossing out the incorrect word in each set of brackets. Then students use that information to complete the Activity sheet, 'Education for all?'. Here, they consider the perspectives of different groups on aspects of education.

The Resource sheet, 'Child labourers', provides students with an understanding of life as a child labourer in the industrial period. They use this information to complete the Activity sheet, 'Plan a story', where they plan a story about children during the industrial period.

Extension activities

- Work with the students to compile a table comparing children's lives in modern times to children's lives in the industrial period. You could include aspects such as education, housing, work, family life and ages for specific activities such as marriage and voting.
- Have students write a paragraph outlining what they appreciate most about today's lifestyle.
- As a class, read a passage from *Oliver Twist* by Charles Dickens (1812–1870). It is about a poor boy who lives in a workhouse and is then sold into a parish apprenticeship. Students may find Dickens' language inaccessible; there are many movie adaptations available.

Education

 Cross out the **incorrect** word in each set of brackets.

Before the Industrial Revolution, only upper and middle class (children / child) went to school or were tutored. (Pour / Poor) children learned how to work from (there / their) parents or became apprentices to a master to learn a trade. Masters did not pay wages to apprentices because they were learning, but usually provided food and (housing / house).

In the 1830s, governments in Britain and Australia became concerned that children (were / where) becoming criminals because they were not (been / being) educated. They were also left unsupervised all day while their parents worked.

In Australia, governments established schools (too / to) educate children. Some religious groups like the Catholics and Anglicans also established schools. School wasn't compulsory, so some parents kept (their / they're) children at home when they needed them to work.

Students usually learned English, Arithmetic, Geography and History. Boys (were / we're) sometimes taught Latin, while girls were usually taught sewing and knitting. Students often learned by repetition, to teach them obedience.

Children who did well at school could apply to be pupil teachers when they finished their schooling. They assisted for (two / to) years and (by / buy) the age of 15 they could be teachers.

In 1872, Victoria became the first Australian colony to make education free, secular and compulsory. This meant that children did not have to pay, no religion controlled what (were / was) studied, and all children had to attend. Society now (thought / taught) that it was more important for children to study than work.

Schooling became compulsory in Scotland in 1872 and in Britain in 1880. Compulsory education reduced the number of child workers. Most children (know / now) began work when they were 12.

Every morning we repeat our times tables as a class. The teacher says it helps us to learn the numbers. Then we write the alphabet on our boards. It has to look exactly like the way the teacher writes it. If we forget our numbers or if our writing is not neat, we get hit to make us remember.

Education for all?

 Use the Activity sheet, 'Education', to help you complete the questions.

1 Write the terms beside their definitions: apprentice, compulsory, pupil teacher, secular.

Term	Definition
	Non-religious, not influenced by religion
	A person who learns a trade by working with a master
	Something you have to do
	A young assistant to a teacher

2 Different groups have different perspectives about events. Describe what each group might think about these events in the Industrial Revolution.

Hint: one group may see the same event in different ways. For example, parents could be happy that schooling is free, but may want it to be religious, not secular.

a It is compulsory for children to go to school.

Children	Parents
Factory owners	Government

b Schools should be secular and free.

Children	Rich people
Catholic Church	Government

Child labourers

Factory lives

In the industrial period, many people moved to the cities to work in factories. Factory wages were low. This meant that everyone in the family, including young children, often had to work to help the family survive. The conditions in factories were harsh.

- Children could start working at the age of five years.
- The work was boring and repetitive.
- They worked long hours, sometimes 14 or 16 hours a day.
- Overseers beat children who did not work fast enough.
- Children lost arms and legs or died if they got trapped in the machinery.

Elizabeth Bentley began work at a flax mill when she was 6 years old. On busy days, she worked from 5 am to 9 pm. That's 16 hours, with only a 40 minute break for lunch.

Workhouses

Some orphans and poor people were kept in places called workhouses. The people there were often separated from their family members. They were given very little food and worked very hard. Friedrich Engels called workhouses 'Poor Law Bastilles'. This meant he thought they were prisons for the poor.

Friedrich Engels was a rich German. His father owned factories in England, but he didn't want to be a factory owner. Instead, he wrote about the experiences of the working class.

Parish apprentices

Church parishes were made up of people who lived in the same area, and were led by a priest. The parish had to look after the poor in their community. This included children who were orphans or half-orphans, which meant they had only one parent. The parish helped the children find jobs by sending them out as apprentices to be taught useful skills. The children were fed and clothed for their work, but rarely paid. The masters took them as a charitable act. If the masters refused to take the children, they had to pay the parish a fine.

One boy, George Orange from Leeds, was taken and returned almost weekly. This made his parish a good amount of money through fines.

Plan a story

Use the information from the Resource sheet, 'Child labourers', to help you come up with ideas for a story about children during the industrial period.

Structure of a story

- Introduction: introduce the people, location and time; hint at a problem to come.
- Complication: expand on the problem that needs to be solved.
- Resolution: have your characters solve the problem.

Character's name:

Illustrate me, annotating key features of my appearance and personality.

Location:

Where does my story happen?

Time:

When does my story happen? What is happening then?

Relationships:

Who else is in my story?
How do I feel about them?

Problem:

What is stopping me from doing what I want?

Objectives

- Gain an understanding of how different groups in society were seen and treated
- Consider the impact that certain differences could have on the experiences of people who lived at that time
- Consider how the industrial period may have changed different groups

Prior knowledge

Students should have a basic knowledge of the Industrial Revolution.

Background

Racism was a significant element of society in the 1800s. These xenophobic attitudes were connected to a newly developed sense of nationalism. This meant that a country was becoming more than the place you lived – it was an emblematic symbol of your identity. This led to an easy acceptance of imperialist attitudes in which the country controlling an Empire, such as Britain, valued themselves and their abilities over those of the people in the colonies they invaded and controlled. Imperial European countries and their cultures were more valuable than those of other countries.

In colonies such as Australia, these racist attitudes were expressed through the treatment of Indigenous Australian peoples as lesser beings, and their land being classified as *terra nullius* or 'empty land'. This devaluing and dehumanising treatment of Indigenous Australian peoples led to the discriminatory experiences of reservations, loss of citizenship, stolen generations and numerous other indignities both small and large.

Groups such as the Jews and the Irish were also discriminated against, even when they lived in European countries or in Britain. Negative stereotypes were applied to the 'national' or 'racial' identities of these groups, regardless of how little these stereotypes actually resembled the individuals and their communities. This view of 'them' and 'us' helped to form national connections but it also led to racist actions which negatively impacted on the persecuted groups.

Another significant development of the industrial period was the emergence of the middle class as a significant and powerful group. Previously, there was an upper class and a lower class. The technological

changes of the industrial period resulted in a professional class of people such as teachers, lawyers and doctors. This middle class became significant, dominating understandings of culture, national identity and literature.

Starter activity

Ask the students to consider how our society treats different groups; for example, children, teenagers, migrants, disabled people and older people. How are these groups seen and how are they treated?

Discuss the power of stereotypes and the impact they can have on the way people are treated.

Resource and Activity sheets

On the Activity sheet, 'Social hierarchies', students use a Venn diagram to identify similarities and differences between the social hierarchies of the Middle Ages and the industrial period.

The Resource sheet, 'Indigenous Australian people', shows a primary source illustration of an Indigenous Australian family in the first years of European settlement. Students use the Activity sheet, 'Source analysis', to guide them through the process of analysing the illustration. They are encouraged to consider different features of the image and how they help with understanding the values of the person who drew the source, as well as providing a stronger understanding of the socio-historical context. Make sure the students understand that **bias** means that a person shows a prejudice towards (likes or dislikes) a group of people.

The Activity sheet, 'The Irish', informs students about how the English viewed Irish people during this time. Students add the missing vowels to complete the information, then consider three primary sources. On the Activity sheet, 'Stereotypes and beliefs', students are guided through the process of analysing these three primary sources.

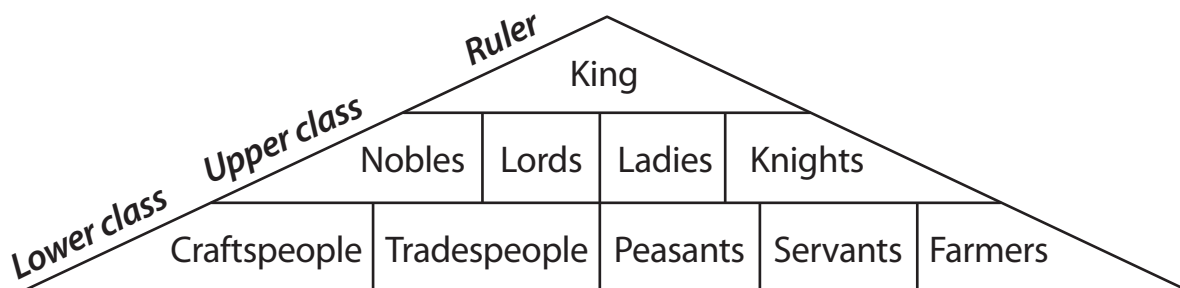

Extension activities

Have students work in small groups to research another group persecuted during this time period; for example, Africans, Jews, women in Australia and/or Britain, or the Chinese in Australia.

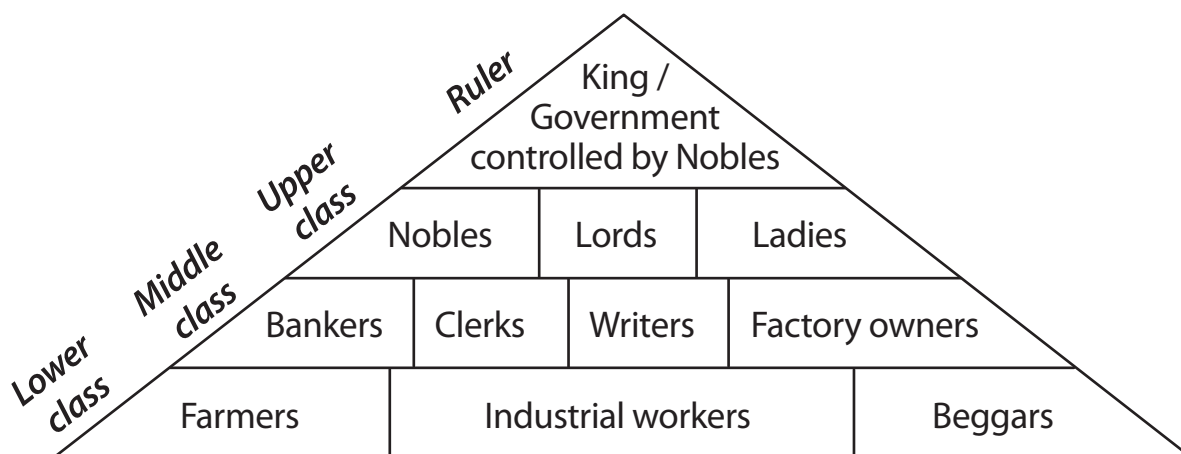

Ask students to find quotes and images that show how society viewed these different groups. Discuss the values these attitudes show.

Social hierarchies

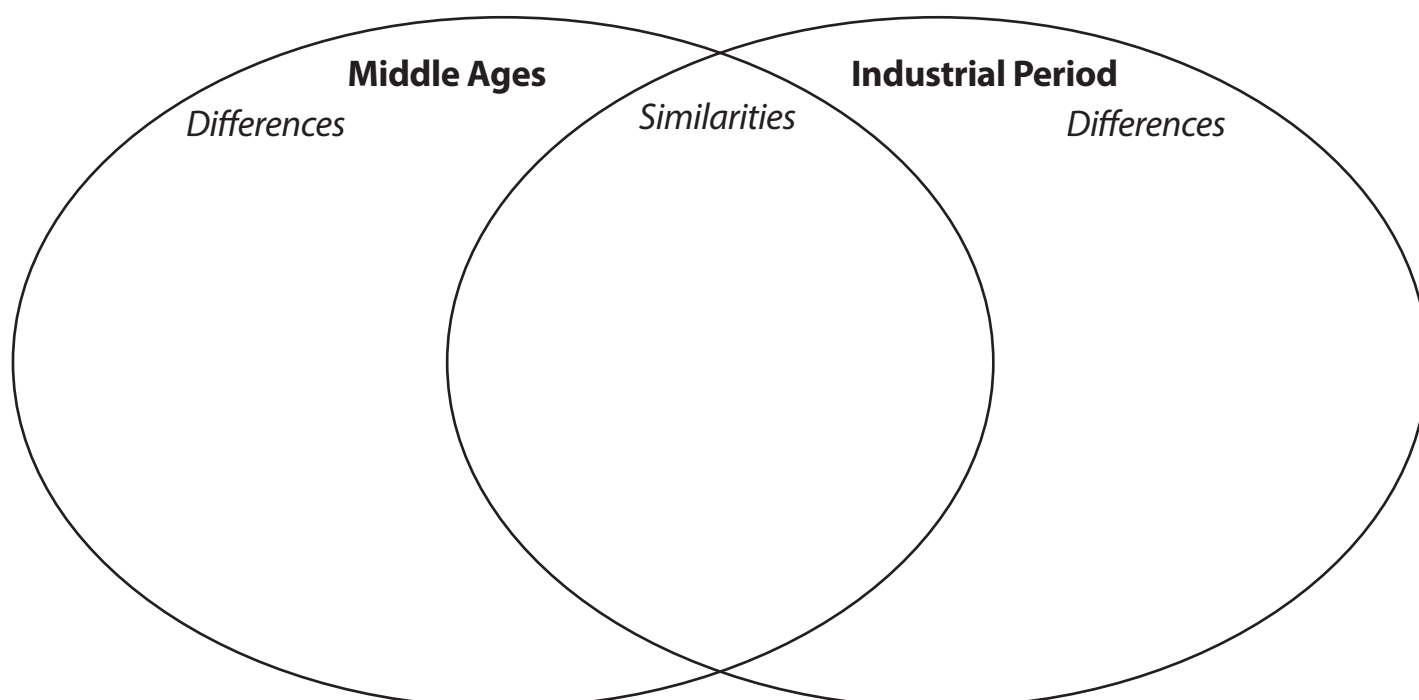

Middle Ages

Industrial Period

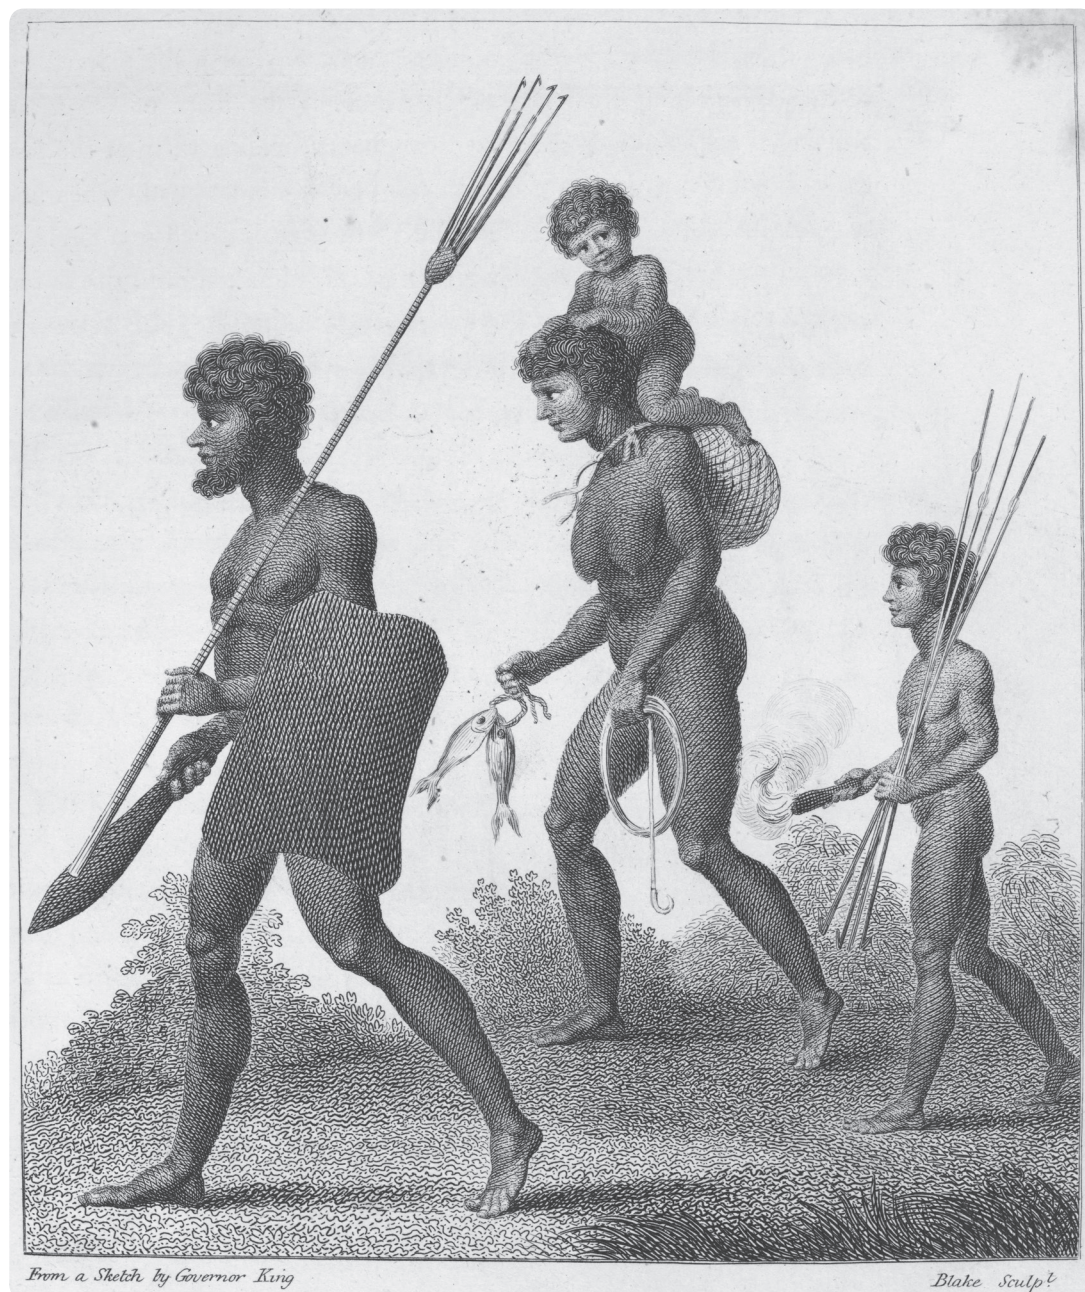

Use the Venn diagram to identify at least two similarities and two differences between the social hierarchies.

Indigenous Australian people

This is one of the first recorded images of Indigenous Australian people. It was drawn by Governor Philip King.

'A Family of New South Wales', 1792, William Blake (1757–1827) engraver after sketch by Governor Philip Gidley King (1758–1808) artist, From John Hunter, *An Historical Journal of the Transactions at Port Jackson and Norfolk Island*, London, 1792, Image 30328102131603, State Library of Victoria.

Governor Philip King was born into a lower class family, but gained power through joining the navy. When Captain Arthur Philip was sent to create a settlement in Australia, King was his second in command. He was given control of the settlement on Norfolk Island in 1788 and became the Governor of New South Wales in 1800.

Source analysis

Paintings and drawings often tell us important information about the way people viewed the world. They were especially important in times when most people could not read – these people could still look at and be affected by an image.

 Follow the ADAMANT scaffold to analyse the illustration on the Resource sheet, 'Indigenous Australian people'.

Author: Who created it? What is the background of the artist? Any biases?	
Date created: What was happening in the world? How does this link to the image?	
Audience: Who was it made for? Why? How can you tell?	
Message: What is the message of this image?	
Agenda: What might be achieved by making this?	
Nature: What type of source is it? What does this tell you about how accurate it could be?	
Technique: What techniques are used to persuade or inform? (e.g. signs, symbols, language)	

Extra activity: Use this table as a plan to help you write a paragraph about the illustration.

The Irish

 **1** Write the missing vowels (a, e, i, o, u) to complete the information.

Engl__nd ruled over Ireland for many ye__rs. The English often d__scribed the Irish people as idiotic, brutish and rebell__ous drunks. Having a neg__tive view about an entire rac__ is a **stereotype**. This means pe__ple judged others without kn__wing what they w__re really like. Stere__typing people m__kes it easier to hurt or m__streat them beca__se they are n__t seen as 'real people'.

The Engl__sh land__wners often treat__d Irish farmers badly. The farm__rs had to give almost all of their crops to the landl__rds to pay the r__nt. When the crops fa__led, the Irish p__ople starved. This l__d to at least three maj__r fam__nes in Ireland during the ind__strial period.

Famine	Year/s	Causes	Consequences
The Year of Slaughter	1740–1741	Poor grain harvests: oats and also potatoes	Possibly up to 38% of the population died.
Great Famine	1845–1852	Failure of potato crop	Thirty percent of the population died or moved to other countries.
Mini-famine	1879	Potato crop reduced in Western Ireland	This famine caused hunger more often than death.

Here are some descriptions of Irish people by English writers. They show some of the negative stereotypes that English people had about the Irish.

Source 1

Ireland is like a half-starved rat that crosses the path of an elephant. What must the elephant do? Squelch it - by heavens - squelch it.

Thomas Carlyle, British Essayist, 1840s

Source 2

The real evil with which we have to contend is not the physical evil of the Famine, but the moral evil of the selfish, perverse and turbulent character of the [Irish] people.

Charles Trevelyan, head of famine relief, 1840s

Source 3

[...] more like squalid apes than human beings The wild Irish understand only force.

James Anthony Froude, Professor of History, Oxford, 1870s

2 Think about the ideas here. Where have you seen similar ideas about a different group?

Stereotypes and beliefs

 Use the three sources on the Activity sheet, 'The Irish', to complete the table.

Source	Representations of the Irish	What these stereotypes tell you about the English view of the Irish people
Source 1: Thomas Carlyle	<i>half-starved</i>	
	<i>rat</i>	
Source 2: Charles Trevelyan	<i>moral evil</i> Definition: do not do good	
	<i>selfish</i>	
	<i>perverse</i> Definition: do the opposite of what they should	
	<i>turbulent</i> Definition: chaotic	
Source 3: James Froude	<i>squalid</i> Definition: filthy	
	<i>apes</i>	
	<i>wild Irish</i>	
	<i>understand only force</i> Definition: You have to hit them to make them understand things.	

Objectives

- Identify key social problems during the Industrial Revolution
- Understand the significance of these problems
- Learn about the methods people used in attempting to address these problems

Prior knowledge

Students should have a basic knowledge of the Industrial Revolution.

Background

In the industrial period, many people faced difficult decisions about how to survive. Working in the factories was not always possible, and some people were moved regularly between working and unemployment, depending on their employers. This left them in the difficult situation of needing other ways to pay their bills and feed their families. The poorest of the poor turned to the workhouses, which were the government-sanctioned form of poverty relief. People in the workhouses were treated badly: forced to work long hours on pointless tasks that taught them no skills, separated from their family members and given very little food. To avoid the workhouses, people turned to shady activities such as prostitution, baby farming (poor women were paid to look after other people's children), renting out rooms and begging. Activities such as prostitution endangered their lives as they were often mistreated by men and even murdered like Jack the Ripper's victims.

Other people's activities gradually became more criminal. For example, some people forced family members into prostitution and some baby farmers killed the babies in their care. Others turned to murder, theft and burglary. The consequences for these actions were extreme. Many people were executed or transported to Australia for their crimes. But not engaging in these activities could be almost as dire. They often faced the prospect of death every day.

In the late 1800s, some people began questioning the way that poor people and criminals were treated and this led to more enlightened attitudes. Social reformers created groups for the protection of children (National Society for the Prevention of Cruelty to Children, NSPCC) and the protection of animals (Royal Society for

the Prevention of Cruelty to animals, RSPCA). They also began helping poor people by providing soup kitchens and working to get prostitutes off the streets.

Starter activity

What are the social problems in our society? Identify at least two contemporary social problems.

Discuss the complexity of these problems and possible solutions for them. Make sure these solutions would improve our society.

Resource and Activity sheets

On the Resource sheet, 'Baby farming', students read two primary sources and one secondary source that provide information about the 19th century practice of baby farming. Students analyse these sources on the Activity sheet, 'Primary and secondary sources'. They are encouraged to identify the differences between the types of sources and explain their value.

The Activity sheet, 'Social reformers', looks at the lives of two key social reformers: Henry Mayhew and Josephine Butler.

The Resource sheet, 'Age of sexual consent', outlines the way that social reformers brought about positive change for the protection of children. The Activity sheet, 'Protecting girls', consolidates the information on the Resource sheet.

Extension activities

With the class, brainstorm alternative solutions to baby farming for the mothers of illegitimate children during the Industrial Revolution. Solutions could include:

- providing state-run or factory-run day care
- fining fathers who did not contribute to their children's upkeep
- state-run orphanages
- official adoption with government monitoring
- group homes.

Have students choose one idea and compose a speech that supports their idea with clear explanations and the use of convincing evidence.

Baby farming

Source 1

Baby farming became more frequent during the Industrial Revolution. When single women or widows became pregnant, they often struggled to both look after a child and keep a job to support them. Many women turned to 'baby farmers' to care for their children. Baby farmers were often married women or widows who took in and looked after babies for money. The problems began when mothers stopped paying for their children's support or when the baby farmers became greedy. Many children in the care of baby farmers died of malnutrition or neglect. Some were murdered.

Baby farmers accused of murdering babies include Amelia Sach and Annie Walters in England, Minnie Dean in New Zealand, and Frances Knorr and John and Sarah Jane Makin in Australia.

Rachel Towns, *Achieve! History – The Industrial Revolution*, Clayton, Blake Education, 2017, Australia.

Source 2

There is also a growing evil of 'baby farming,' premiums of £6 to £20 being paid for the placing of children in homes where the sooner they die the better everyone is pleased. Legislation on the lines of the *Infant Life Protection Act* of England is [needed] ...

'Criminal Statistics: Annual Police Report, Baby-farming on the increase,' *Auckland Star*, Volume XXIV, Issue 202, 26th of August 1893, New Zealand.

Source 3

Mr Poynton committed Minnie Dean for trial for the murder of Dorothy Edith Carter and discharged Charles Dean, there being no evidence at all against the husband, and he left the Court without a stain on his character ...

At the inquest on the skeleton found in Dean's garden at Winton, evidence was given of several children brought by Mrs Dean mysteriously disappearing. Const. Rasmussen expressed the opinion that the skeleton was that of Willie Phelan.

'Minnie Dean Committed for Trial,' *Inangahua Times*, Volume XVIII, Issue 508, 11 June 1895, New Zealand

Primary and secondary sources

Primary sources

- Sources include images, texts, pottery and tools.
- They were made **at** the time being studied and show something about the world at that time.
- They usually focus on specific events or issues.

For example, a diary written in 1944 about World War II is a primary source.

Secondary sources

- Sources include images, texts, pottery and tools.
- They were made **after** the time being studied.
- They usually focus on events and issues in a more general way.

For example, a textbook written in 2017 about the Industrial Revolution is a secondary source.

 **1** Use the table to analyse the information on the Resource sheet, 'Baby farming'.

	Source 1	Source 2	Source 3
Primary or Secondary?			
Explain – how can you tell?			
Why is it valuable? What can we learn from it?			

2 Copy and complete these sentences in your workbook.

- Single women and pregnant widows ____.
- Baby farmers ____.

3 With a partner, discuss what you found interesting about these sources. List the key ideas from your discussion.

Social reformers

	Henry Mayhew	Josephine Butler
Lived	1812–1887	1828–1906
Family background	Son of Joshua Mayhew, a lawyer, and Mary Ann Fenn	Daughter of John Grey, a social reformer, and Hannah Annett
Early life	Originally apprenticed as a lawyer but ran away to sea on a ship to India. Returned to England to become a writer.	Taught at home before attending boarding school. Separated from the church after seeing the body of a suicide and the Great Famine in Ireland.
Marriage and family	Married Jane Jerrold, daughter of friend and writer Douglas Jerrold and Mary Ann Swann, in 1844. Had five children.	Married George Butler, a school examiner, in 1852. Had four children.
Key moment for social reform	Helped start the satirical magazine <i>Punch</i> . Later, became bankrupt and wrote articles for anyone who would take them. Wrote about the suffering of the poor in a cholera outbreak in 1849.	Her daughter died in an accident and she was moved to help people, especially people in workhouses and young prostitutes.
Wrote	<i>London Labour and London Poor</i> , 1851 <i>The Criminal Prisons of London</i> , 1862 <i>London Characters</i> , 1874	<i>The Education and Employment of Women</i> , 1868 <i>Women's Work and Women's Culture</i> , 1869
Known for	Studying poor people in order to understand and report on their lives	Fighting to protect women's rights, particularly the rights of prostitutes, and suffrage

 In your workbook, list two similarities and two differences between these social reformers.

Age of sexual consent

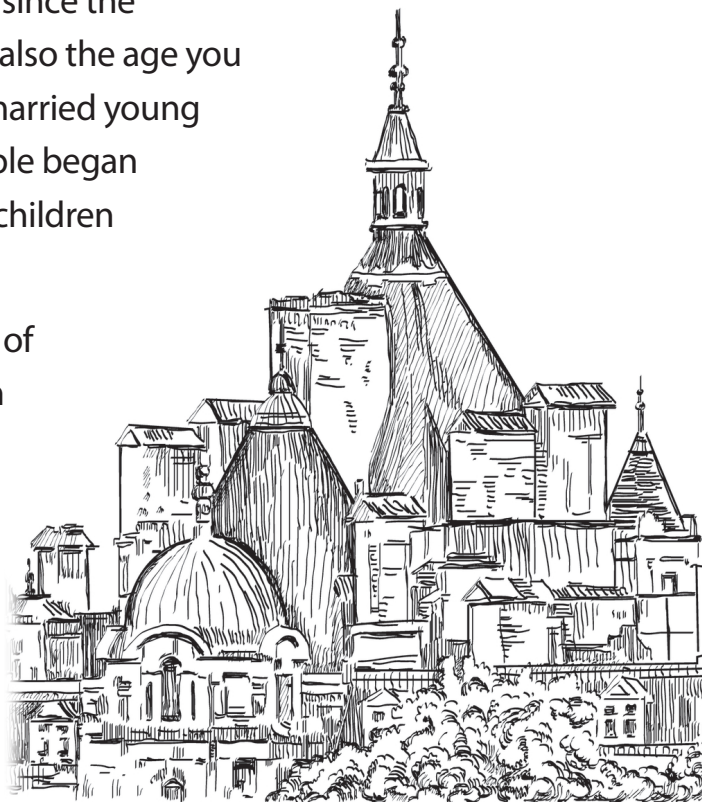

Criminal Amendment Act of 1885

The age of consent is when someone can legally engage in sexual activity.

In Britain, the age of consent had been 12 years since the Westminster statutes of 1275. Twelve years was also the age you could get married. In the Middle Ages, people married young as they also often died young. However, as people began to live longer they began to see 12 year olds as children rather than potential marriage partners.

Social reformers including William Stead (editor of the *Pall Mall Gazette*), Bramwell Booth (Salvation Army) and Josephine Butler (a protector of women) became concerned about what they called the 'white slave trade'. This referred to the practice of selling young girls to brothels as prostitutes.

In 1883, William Stead wrote a series of articles called *The Maiden Tribute of Modern Babylon*. He described the terrible situations experienced by young women living in poverty, especially in London. Finally, he drew attention to the white slave trade by describing how easy it was for him to purchase a girl aged 13 years. He pretended that he worked for a French brothel, and approached a woman named Rebecca Jarrett who specialised in finding girls for brothels. Rebecca arranged for William to purchase Eliza Armstrong from her mother for five pounds. After demonstrating how easy it was to buy young girls for brothels, Bramwell Booth arranged for Eliza to move in with a Salvationist family. William's articles about purchasing Eliza resulted in a court case where he faced charges for buying a girl. He was imprisoned for three months. The publicity surrounding the articles, court case and prison sentence encouraged the government to change the age of consent from 12 years to 16 years with the *Criminal Amendment Act of 1885*.

Protecting girls

 Use the Resource sheet, 'Age of sexual consent', to complete the activities.

1 Write T for true or F for false in the box beside each statement.

- a The age of consent in Britain used to be 12 years. ☐
- b In the Middle Ages, people married young because they died young too. ☐
- c The white slave trade was about adult prostitution. ☐
- d Josephine Butler bought a child to sell to a brothel. ☐
- e Bramwell Booth was a prostitute. ☐
- f W. T. Stead wrote an article called *The Maiden Tribute of Modern Babylon* to celebrate the fact that he could buy young prostitutes. ☐
- g The age of consent was changed in 1883. ☐
- h The young girl who was bought for a brothel was Eliza Armstrong. ☐
- i W. T. Stead was imprisoned for six months. ☐
- j W. T. Stead was the editor of *Punch*. ☐

2 Outline the problem and action in the situation of Eliza Armstrong. Consider in what ways the outcome was successful.

Problem:	Action:	Why successful?

3 The age of consent is 16 in Australia today. Why is it important to have an age of consent?

Objectives

- Understand the key ideas and movements during the industrial period
- Consider how issues like Imperialism can have positive effects for one country and negative effects for another country
- Identify individuals related to some key ideas and movements of the industrial period

Prior knowledge

Students should have a basic knowledge of the Industrial Revolution.

Background

The 1700s and 1800s were a highly significant period when many new ideas emerged, including republicanism, liberalism and secularism. Sometimes this period is described as the Enlightenment. Emerging ideas challenged the status quo and allowed for the development of even more new ideas. The scientific approach of Enlightenment thinkers introduced a new focus on empirical learning and thinking. This paved the way for Darwin's theory of the evolution of the species and later, and less admirably, social Darwinism.

This period was also significant for its development of national and imperial identities. Many European countries valued themselves and their successes based on their racial or national qualities. The governments of these countries saw value in extending their empires by invading other countries, particularly in Asia, Africa and the Americas, and turning them into colonies. The colonies and their people were seen as lesser in value and treated accordingly.

As the industrial period continued, the plight of the poor working class became more apparent. Social philosophers such as Friedrich Engels and Karl Marx began challenging society by outlining the idea of a new 'communist' society that could arise in the future after the Industrial classes rebelled and overthrew the class-based ruling system.

Starter activity

Compile a class mind map summarising the social situation during the Industrial Revolution: poor working conditions, long hours, mistreatment of children, beatings and disregard for the poor.

Ask the students to imagine that they lived during that time.

- What ideas do they have about changing their world?
- What would be a perfect world for poor people?
- What would be a perfect world for rich people?

Resource and Activity sheets

The Activity sheet, 'New ideas and movements,' asks students to match names with definitions for the key ideas and movements emerging during the 1700s and 1800s. Students then consider these ideas and movements and choose one historical person to research.

The Activity sheet, 'Communism,' informs students about the philosophers who developed the idea of communism and the key features of their ideology.

On the Activity sheet, 'Darwinism and social Darwinism,' students discover the positives and negatives that resulted from Charles Darwin's theory about the evolution of the species.

The Activity sheets, 'Imperialism' and 'Colonialism,' explore the situation in colonised countries ruled by empires. 'Imperialism' defines the term and focuses on the British colonisation of China. 'Colonialism' considers the individual impacts of imperialism on the people of colonial India.

Extension activities

Have students choose one key idea or movement from this unit and construct a poster about it, using either ICT or poster paper. They should:

- outline the features of the movement or idea
- identify when it was important, and consider the time period and what else was happening in the world at this time
- identify where it happened and why
- identify key figures connected to it
- discuss why it was important.

Ideas and movements: Chartism, communism, Darwinism, social Darwinism, imperialism, nationalism, egalitarianism, suffragette movement

New ideas and movements

-  **1** Write each term beside the correct definition: imperialism, nationalism, Chartism, egalitarianism, social Darwinism, communism, suffragettes.

Idea or movement: Definition	Key figure(s)
_____: A movement fighting for women's rights to vote and be treated equally	Emmeline Pankhurst
_____: The idea that all wealth is owned by the community so that each person receives what they need	Karl Marx and Friedrich Engels
_____: The belief that your own country is the best country	John Stuart Mill
_____: A movement for all men to have the right to vote and be involved in politics. Used a charter to list their demands.	William Lovett
_____: The idea that all plants and animals evolve over time. It was used to suggest that some people should have children while others should not, based on their race, ability and intelligence	Francis Galton
_____: The idea that one country is better than others and can use their power to invade and control other countries	Queen Victoria
_____: The idea that all people are equal under the law and should not be treated differently because of their social class	Very popular in Australia, as no class system was in place

- 2** Which idea makes the most sense to you? Explain your answer.

- 3** Research one of the historical people listed in the table. In your workbook, discuss the idea or movement they supported and explain why they were a key figure.

Communism

Character profile

– Friedrich Engels

Born: 1820, Germany

Died: 1895, England

Relationship:

Mary Burns,
a working class woman who died in 1863.
Later married her sister, Lydia.

Family life: Wealthy German family in
manufacturing

Wrote: *The Condition of the Working Class
in England, Socialism*

Character profile

– Karl Marx

Born: 1818, Germany

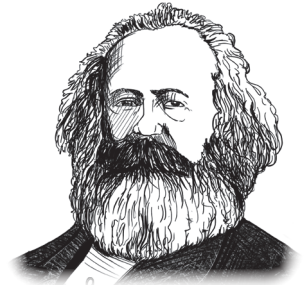

Died: 1883, England

Relationship: Jenny

von Westphalen,
a baroness (noble lady)

Family life: Middle class German lawyer
(Jewish background)

Wrote: numerous texts, including
Das Kapital, The Communist Manifesto

Friedrich Engels and Karl Marx believed that the lives of the poor were ruined by the Industrial Revolution. They wrote a book called *The Communist Manifesto*. It was about a future where the poor people rebelled and brought about a communist world where everything was owned by the community and shared equally.

Let the ruling classes tremble at
a Communistic revolution. The
proletarians have nothing to lose but
their chains. They have a world to win.
Working men of all countries unite!

Karl Marx and Friedrich Engels,
The Communist Manifesto

 **1** Write each word beside the correct definition:
proletariat, communism, manifesto.

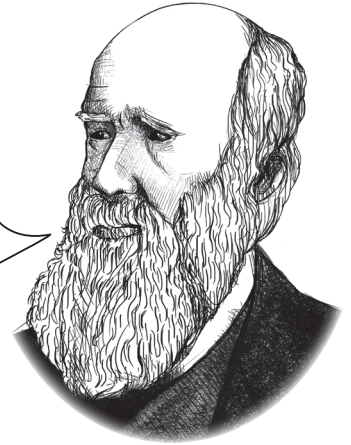

- a** _____ an ideal society where everyone is equal
- b** _____ working class
- c** _____ a document stating political views and arguments

2 What did the communists want? Why?

3 Which writer spent more time with proletariats? _____

Darwinism and social Darwinism

Hello, my name is Charles Darwin. I was born in 1809 in England and became a naturalist and geologist. In the 1830s I travelled on a ship called the *Beagle* and saw many different plants and animals. This led me to form my theory of evolution. It is about the way animals and plants change over time to suit their environments. I published this theory in *On the Origin of Species*. This made many people rethink their ideas about humanity, seeing people as also evolving.

 1 Use the word bank to complete the information.

Word bank

- camel
- genes
- evolved
- harsh
- fat
- hump
- food
- water

A _____ is an animal that is well-suited to the desert because it doesn't need much water. It stores _____ in its _____, which helps it to survive even in areas without much _____ or _____. It has _____ to deal with its _____ environment. Darwin would argue that the camels who were good at storing fat to help them cope with desert life then passed these _____ on to their offspring.

Hello, my name is Francis Galton, I was born in 1822 and Charles Darwin is my cousin. I believe in evolution like Darwin, but I think that humans should help evolution by deciding who should be allowed to have children and who shouldn't. This theory is called eugenics or social Darwinism. Many social Darwinists had different views on who should or shouldn't be able to have children. They believed that the wrong people having children would ruin humanity. The groups they targeted included Asians, Africans, poor people, disabled people and those with mental health issues.

2 Use the word bank to complete the information.

Word bank

- ability
- race
- children
- Social
- discriminates
- treated
- improve
- unfair

_____ Darwinists believed that you could _____ the human race by not allowing some people to have _____. This way of thinking _____ against people based on their _____ and _____. Most people say that this way of thinking is _____ and not how they want others to be _____.

Imperialism

 **1** Write each underlined word beside the correct definition below.

European countries often had great military strength. They had new weapons, such as guns and cannons, which they used to overpower other countries. Britain became one of the biggest empires in the world in the 1800s. They controlled large parts of Asia, Africa, Canada, Australia and many other key regions. The countries ruled by the British were called colonies. These colonies had little say in how they were ruled. They did not have the weapons of the British and so they had no hope of successfully fighting back.

Britain won two wars in China in the 1800s: the First Opium War in 1842 and the Second Opium War in 1858. In both wars they gained more control over China. This was valuable because they wanted tea, silk, spices and other luxury products that only came from China.

In many of the British colonies, particularly in Asia and Africa, local people were encouraged to learn English. Often, English became the official language of the colony. Local people who became Anglophiles and adopted British practices were often treated better than those who did not. But they were still not treated as well as British people.

- | | | |
|----------|-------|---|
| a | _____ | Defeat someone with your superior strength |
| b | _____ | People who love Britain and British things |
| c | _____ | An addictive drug that makes the user feel relaxed and sleepy |
| d | _____ | The people and weapons needed to overpower others |
| e | _____ | A country that is ruled over by another country. |
| f | _____ | Expensive and desirable |

2 List three things that the British wanted from China. Explain why they saw each one as as a luxury item.

- _____
- _____
- _____

Colonialism

My name is Ishmeet. I want to be an engineer when I grow up. My father and mother tell me to stop dreaming such silly dreams. They tell me to look at my face in the river and I will know what I will really become. It hurts me when they say such things, but I know it to be true.

I am an Indian, my skin is darker than the skin of the British people who rule over us. When they look at me they do not see how smart I am, how many languages I can speak or the dreams I have. All they see is my skin. All the good jobs go to the British first, the Anglo-Indians second and then all other Indians last. I probably can't ever be an engineer. But I still dream about it all the same.

My name is Rhett. I am an Anglo-Indian. My father, Geoffrey, is a British soldier and my mother, Thirumangai, is Indian. It was quite normal for British men to marry Indian women because there were so few British women in India. Or at least there weren't many before the 1850s.

Anglo-Indians, like me, were born to Indian and British parents. We often have lighter skin, speak English and wear English clothes. Being Anglo-Indian is useful as the British, who rule over India, give more jobs to Anglo-Indians than other Indians. We aren't treated as well as the British, which is a pity - I see myself as more British than Indian.

-  **1** Read the two accounts. What makes Ishmeet and Rhett different to each other?

- 2** What problem do they both face?

- 3** Think of one group of people who are treated unfairly today. In your workbook, write a speech arguing for their equal treatment.

Achieve! Instant Lessons

Quality ready-to-use resources

Each book in the *Achieve!* series has been designed and written for **secondary students who have low-level literacy skills** and require **modified** classroom activities to fully participate in the curriculum. Students will experience success as they work alongside their classmates in the same subjects with material that is tailored for their literacy needs.

Key features

- ✓ Mature-look page layout and illustrations
- ✓ Topics that will interest teenagers
- ✓ An emphasis on literacy skills
- ✓ Clear learning objectives
- ✓ Starter activities, background information and ideas for summarising a lesson

The work sheets in this series are ideal for group or individual study and are easy for classroom helpers to implement in one-on-one lessons. You can also use the photocopiable pages for revision, assessment and home study.

Achieve! History The Industrial Revolution 1750–1914

While very suitable for the regular classroom, the *Achieve!* series of History titles has been written at a literacy level that is appropriate for secondary school students who, because of poor reading skills, may struggle with regular classroom materials.

This title explores the key events that caused the Industrial Revolution and how this impacted on working conditions, agriculture, transport and people's lives around the world, including Australia. Units about working conditions in factories and mines, suffrage and the role of trade unions illustrate how life changed in the cities and countryside for women, men and children. Students will examine the roles of social reformers such as Caroline Chisholm, Henry Mayhew and Josephine Butler, who fought to improve the lives of working people. Key ideas of the time such as imperialism, nationalism, Chartism, egalitarianism, social Darwinism and communism are also covered in this title.

The CD-ROM contains all the pages that are featured in the book, as well as a file of illustrations that can be used in other work sheets. These files can be easily edited to suit the needs of students.

Topics include

The Industrial Revolution in Britain
Factories
Transport
Land
Australian and British suffragettes

Children
Different groups in society – the Indigenous
Australian and the Irish communities
Social problems
New ideas
