INTRODUCTION

Instant Lessons PowerPoint slide presentations have been designed to assist teachers in presenting essential geography curriculum to junior and middle secondary school students. Physical, environmental, social and political geography themes are included throughout the series.

The enclosed CD-ROM contains:

- 5 PowerPoint slide presentations
- this book, in PDF format
- the activity sheets in this book, as editable word documents.

Key features and uses:

- Each topic is explored through a core set of slides.
- Teachers can tailor-make their own slide presentations by adding, deleting or altering slides.
- Carefully chosen diagrams, maps, graphs, illustrations and photographs illustrate the concepts being taught.
- On-screen activities test and extend student comprehension.
- Slide notes are provided as a summary of the content of each slide.
- Teacher's notes are provided in this book for each topic.
- Student worksheets have been designed so that they can be used during the presentation or later in the classroom, or as homework, extension, assessment or revision. They can be accessed on the CD-ROM in PDF and Word formats, or photocopied from this book.

Contents

PowerPoint User Guide	4
Teacher's notes	6
Population Change and Growth activity sheets	8
Urbanisation activity sheets	11
The Ageing of the World's Population activity sheets	14
World Food Supplies activity sheets	17
Global Patterns in Fishing activity sheets	20
Selected answers	23

It is recommended that teachers preview the slide sets before showing them to their class, to become familiar with the format and features.

Read the Teacher's notes for an overview of each topic, including key terms and concepts.

The PowerPoint presentations

Starting a slideshow presentation

The Slide Show is used to display the presentation on the screen. It is recommended that you use an external projector for whole-class use.

There are a number of ways to begin a Slide Show presentation. In the Windows environment, the CD-ROM will autorun. From the Main menu, simply click on the presentation you wish to view.

In the Macintosh environment, double-click the file index.pps. From the Main menu, click on the presentation you wish to view.

You can also open each presentation from within the PowerPoint application.

Navigating

Main menu

- ◆ From the Main menu, click Close to quit.
- ◆ During the presentations, click Close in the top right corner at any time to return to the Main menu.

Navigating use the mouse

- ◆ Click – Moves presentation to the next slide.

Moving forward

- ◆ Press the N key.
- ◆ Press the Spacebar or Enter key.
- ◆ Press the Page Down key.
- ◆ Press the Right Arrow key.

Moving backward

- ◆ Press the P key.
- ◆ Press the Backspace key.
- ◆ Press the Page Up key.
- ◆ Press the Left Arrow key.

Navigating using the slide show toolbar

At the bottom left corner of the slide show, a toolbar is displayed. There are three buttons that deal with navigation.

- ◆ Left Arrow button – Moves presentation back to the previous slide.
- ◆ Right Arrow button – Moves the presentation to the next slide
- ◆ Slide Icon button – Provides a pop-up menu with Next and Previous menu items, as well as a Go to Slide item that allows for navigation to a specific slide.
- ◆ Right-Click – Provides a pop-up menu with Next and Previous menu items, as well as a Go to Slide item that allows for navigation to a specific slide.

Navigating to a specific slide

There are a number of different ways to display a specific slide.

- ◆ Slide Number + Enter – While in the Slide Show mode, type in the slide number to be displayed and press Enter.
- ◆ Control-S – To display a menu of all slides in the presentation, press Control and S keys. A menu will appear. Select the desired slide from the menu and press Enter.
- ◆ Slide Icon Button – Choose the Slide Icon button from the Slide Show Toolbar. Choose Go to Slide, then choose the desired slide.
- ◆ Right-Click – Choose Go to Slide, then choose the desired slide.

Blanking out the screen

To present a blank screen while in the Slide Show mode:

- ◆ Slide Icon Button – Choose the Slide Icon button from the Slide Show Toolbar. Choose Screen menu item. Select Black Screen or White Screen.
- ◆ Right-Click – Choose Screen menu item. Select Black Screen or White Screen.

Speaker notes

Speaker notes are included for each slide to provide a summary of the content of that slide. In Normal view, these notes appear at the bottom of each slide.

Speaker notes can be displayed during a slide show presentation. However, when displayed they will be visible to the audience. If you do not want students to see the speaker notes, but need to access them, print the notes before class from the Word document on the CD-ROM.

To view speaker notes during a slide show presentation:

- ◆ Right-click, choose Screen | Speaker Notes to see the notes for this slide.

Pointer / pen

The Pointer and Pen tools can be used in the Slide Show view to highlight or draw on the screen, much as would be done on a whiteboard.

Drawings can be saved with the presentation or discarded.

Note that while using Pointer tools during a Slide Show, you will not be able to click the mouse to move to the next slide. Instead, use one of the alternative navigations provided on the previous page, such as the Right Arrow key.

To activate the Pointer tools:

1 In Slide Show view, right-click, choose Screen | Pointer Options (or click on the Pen icon in the Slide Show Toolbar) and choose one of the following.

- ◆ Arrow – provides an arrow on the screen.
- ◆ Ballpoint Pen – used to write notes on the screen.
- ◆ Felt Tip Pen – a wider pointed pen, useful for drawing. (Windows Office 2003 or higher only)
- ◆ Highlighter – used to apply a highlight of color that is transparent. (Windows Office 2003 or higher only)
- ◆ Ink Color – Choose the color to be used with the tool.
- ◆ Eraser – used to erase entries. (Windows Office 2003 or higher only)
- ◆ Erase All Ink on Slide – Removes all entries from the screen. (Windows Office 2003 or higher only)

2 Use the mouse to draw or write on the screen.

Ending a presentation

Each of these actions will end the presentation:

- ◆ Click Close in the top right corner.
- ◆ Press the Esc key.
- ◆ Right-click and choose End Show.
- ◆ Choose the Slide Icon button in the Slide Show Toolbar & select End Show.

Technical specifications

Windows

The CD-ROM will autorun in the Windows environment.

To view the presentations – Windows 97 or later operating system

To edit a presentation, open it from within the PowerPoint application.

Note that if editing these PowerPoint presentations in a version prior to Office 2000, cosmetic losses will occur in some animations, and visual effects such as drop shadows may be lost. These losses are cosmetic only, and will not affect the clarity and content of the slide show.

Macintosh

Double-click the file index.pps on the CD-ROM. From the Main menu, click on the presentation you wish to view.

You can also open each presentation from within the PowerPoint application.

To view a fully featured presentation, and edit it, you must have the PowerPoint 2004 application installed. (i.e. Office 2004 for Macintosh or later)

To edit a presentation, open it from within the PowerPoint application. Note that if editing these PowerPoint presentations in a Macintosh environment, cosmetic losses will occur in some animations, and visual effects such as drop shadows may be lost. These losses are cosmetic only, and will not affect the clarity and content of the slide show.

Teacher's notes on the CD-ROM

To open these files you need:

- ◆ **PDF file** – Adobe Acrobat Reader version 6, or higher.
- ◆ **Word document** – Microsoft Office 2000, or higher.

TOPIC 1: Population change and growth

This series of slides looks at the factors that influence population change, including the movement of people and natural causes. Statistical predictions about world population growth are also examined.

Key terms: Demographic transition model of population, economic development, fertility and death rates, push and pull factors, migration and emigration, potential support ratio

Concepts explored: Ways of measuring population characteristics; population change and economic development; fertility; density; net migration; demography; median age; natural increase; factors causing population change – natural causes and the movement of people; birth and death rates; push and pull factors and how they impact on population; the world’s population to 2050; developed and developing regions; age structure in populations; largest countries by population; comparing regions – infant mortality and fertility rates; potential support ratio

Examples used: World statistics about population growth, largest cities and the potential support ratio

Extension slide sets:

- **Set 1:** The world’s population in 2050. Students examine the predicted population figures in developed and developing regions and suggest reasons for similarities and differences. A list of countries by population is also provided and students consider the differences between the two sets of data.
- **Set 2:** Comparing region populations. Students examine notions of infant mortality and fertility rates and how this impacts on potential support rates in more developed, less developed and least developed countries.

TOPIC 2: Urbanisation and resource use

This slide set examines the factors that lead to urbanisation. The nature and problems of urbanisation and megacities are illustrated using local and world examples. Students are also tested on their knowledge of rural cities in Australia.

Key terms: Urbanisation, population density, push and pull factors, migration, megacities

Concepts explored: Urbanisation; Australia’s population density; describing population density; factors that contribute to urbanisation; how urbanisation impacts on demand for resources and services; urbanisation across the globe; the process of urbanisation; rural–urban migration; push and pull factors; the rise of megacities; developed and developing countries; can urbanisation be slowed?; investigating important regional cities in Australia

Examples used: Australian city examples such as Gold Coast City, Launceston, Wollongong and Ballarat. World city examples such as Tokyo, Mexico City, Dhaka, Los Angeles, Moscow and Manila

Extension slide sets: Regional cities and populations in Australia. This set of slides tests student knowledge of regional city locations. The worksheet activity extends upon the slides by asking students to briefly research the cities and list the state they are found in, provide their grid reference, state what the location is best known for and its key industries and developments. Students require access to an atlas and other research materials.

TOPIC 3 – The ageing of the world’s population

These slides examine the key factors that have brought about Australia’s ageing population, as well as the social and economic impacts of this structure. Projected population figures are considered and students are asked to think about what governments can do to respond to or change an ageing population.

Key terms: Ageing population, fertility rate, life expectancy, developed and developing countries, potential support ratio

Concepts explored: Factors contributing to ageing populations – lower fertility rates and greater life expectancy; social and economic implications of an ageing population; the role of older people in the community; impact on developed and developing countries; global age projections; changing fertility rates and life expectancy over time and the reasons for change; measuring an ageing population – potential support ratio; changing age structures in the Australian population

Examples used: United Nations Department of Economic and Social Affairs data and statistics, total fertility rate and life expectancy at birth 1950–2050, potential support ratio data for developing and developed countries

Extension slide sets: Students examine data about changing age structures in the Australian population and are asked to consider how factors such as increasing the age of retirement or the provision of free child care could affect the population structure. Arguments for a debate topic are developed and teachers could choose to extend this task into a whole-class activity.

.....

TOPIC 4: World food supplies

These slides examine the extent of, and reasons for, present and future world food shortages. Natural and human causes of this issue are explored.

Key terms: Food production, developed and developing countries, disasters, food emergencies

Concepts explored: Food shortages; population growth; causes of food shortages – natural and human-made; developing and developed countries; population growth and food production trends; what the world eats and health implications; problems producing food; food emergencies; the nature of food shortages and what can be done about it; United Nations statistics

Examples used: Diagrams reflecting world statistics about food production and shortages, UN facts about world food shortages

Extension slide sets: World food supplies and shortages. Students examine short facts about world food shortages and develop a ten-point plan to help solve this problem. Their answers will reflect their wider understanding of the topic and the materials presented.

.....

TOPIC 5: Global patterns in fishing

These slides include information about the importance of fishing to human well-being and nutrition around the world, how fish is used and the current threats to this important industry. Whaling is introduced and students are asked to consider the arguments for and against whale harvesting.

Key terms: Population, consumption, protein, per capita, aquaculture, inland and marine fishing, environmental management, harvesting, the International Whaling Commission

Concepts explored: Human populations and fish consumption; crustaceans, molluscs and protein consumption; per capita consumption figures; uses of fish and fish by-products; consuming the fish catch; aquaculture – advantages and disadvantages; patterns of fish capture; impacts on fishing – habitat destruction, overfishing, pollution, driftnets, catch quota, dam building, wetland depletion, trawling; commercial whaling

Examples used: World statistics of fish consumption, how fish is consumed and processed, patterns of fish capture

Extension slide sets: Commercial whaling. This set of slides introduces the issue of whaling as a controversial practice. The reasons for whaling are examined and students are asked to consider the role of the IWC and if whaling is a legitimate industry.

POPULATION CHANGE AND GROWTH 1

Measures of population change

The traditional 'demographic transition' model of population considered only birth and death rates. Today, there are a number of indicators used to measure a range of population characteristics. Countries can be seen to pass through several stages of population change. These stages are generally associated with increasing economic development.

- 1** Initially, populations are kept small by high birth rates and high death rates.
How might this relate to economic development? Provide examples to explain your answer.

- 2** Then death rates fall, leading to rapid population growth.
Use an example to explain how this might relate to economic development.

- 3** Birth rates then begin to fall, until a final stage of low growth or stability is reached.
Describe how this stage relates to economic development.

Key definitions

- 4** Write the correct term beside each definition: *fertility, median age, demography, net migration, distribution, natural increase*.

a The study of human populations, with emphasis on statistical features_____

b The middle age in a population, such that there are equal numbers of people above and below that age

c The number of children born, on average, to women in a population during their lifetimes

d Crude birth rate minus crude death rate_____

e The pattern formed by the location of people on areas of Earth's surface_____

f The number of immigrants to an area or country, less the number of emigrants, in a given period of time

Factors affecting population change

Natural causes and the movement of people are two of the factors that cause an area's population to change.

Population change – natural causes

- 5** Complete the following sentences.

a Birth r_____ and d_____ rates are n_____ causes of p_____ change.

b If the birth rate e_____ the death rate, population will i_____.

POPULATION CHANGE AND GROWTH 2

- c** If the d_____ rate exceeds the b_____ rate,
p_____ will decrease.
- 6** Develop a list of factors that may affect birth rates and death rates. Organise the factors into 'human-made' and 'natural cause' groups. Are any factors both?
- _____
- _____
- _____
- _____

Movement of people

Migration is the movement of people into a country or region. Emigration is the movement of people out of a country or region. Over time, migration and emigration can make a significant difference to the population of a country or region.

- 7** What factors might affect rates of migration and emigration?
- _____
- _____
- _____

Migration – push and pull factors

When people move, they are said to be influenced by push and pull factors.

- 8** Cross out the incorrect words in italics.
- a** *Pull factors* / *Push factors* influence people to make decisions about moving to an area. They attract people to move somewhere.
- b** *Pull factors* / *Push factors* influence people to make decisions about leaving an area.
- 9** Organise the following factors into the table. Then add four additional factors to each column. Where possible, list beside each factor a real-world example.
Factors: *conflict or war, employment opportunities, opportunities for better education, severe drought, desire to live by the coast, lack of available work.*

Migration factors	
Pull factors	Push factors

POPULATION CHANGE AND GROWTH 3

The world's population to 2050

The United Nations has forecast the world's population changes until 2050. Part of its data compares the changes in more developed regions with changes in less developed regions. More developed regions include Europe, North America, Australia, New Zealand and Japan. Less developed regions include Africa, Asia (except Japan), Latin America, Pacific Islands and the Caribbean.

- 1

In your workbook, create a line graph of the data in the table at right.
- 2

What similarities and differences are there between the regions?
- 3

Suggest reasons for these similarities and differences.
- 4

How do you think the age structure will change over this period in each type of region?

Population change per year (thousands)		
Period	More developed regions	Less developed regions
2000–05	2989	73 620
2005–10	2408	72 923
2010–15	1929	71 464
2015–20	1380	67 923
2020–25	796	61 448
2025–30	180	55 558
2030–35	–412	50 019
2035–40	–967	44 049
2040–45	–1412	37 573
2045–50	–1732	30 598

Source: World Population Prospects UN 2004

Largest countries by population 2003			
Rank	Country	Population (millions)	Current population
1	China	1289

- 5

a

How is the 2003 table of data different to the 2050 table? Suggest reasons for these differences.

b

Find out where Australia ranks in each list.
- 6

a

Update the 2003 table with current population figures.

b

What do these figures indicate about the 2050 predictions? Are they on track? In your workbook, comment briefly on each country.

URBANISATION 1

Urbanisation in Australia

Australia is one of the most highly urbanised countries in the world. Urbanisation is the process by which an increasing proportion of the population live in towns and cities, rather than in rural areas.

- 1 Write a definition for ‘urbanisation’. Include these words: *population, cities, rural, proportion*.
-
- 2 Describe an example of urbanisation you know of, or a scenario relating to urbanisation which is likely to happen in the future.
-
-

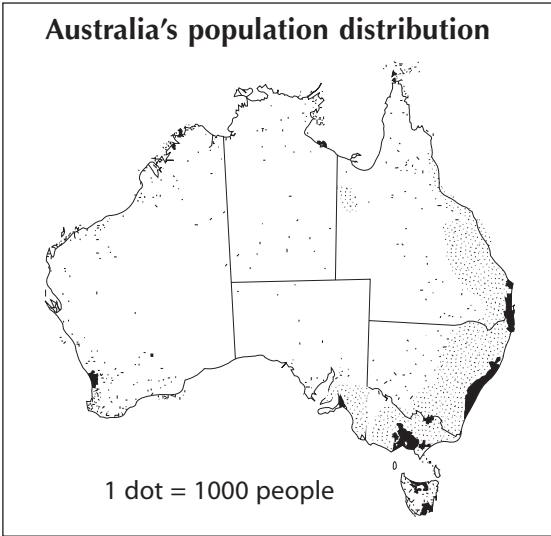

Australia’s population density

- 3 Use this map to describe the density of population in Australia. Use correct geographical terms and locations to describe areas of high, low and moderate density.
-
-
-

- 4 Using colour, show on the map how you think population density may change in Australia by the year 2050. Update the key.

Urbanisation in Australia

- 5 Australia’s high degree of urbanisation is due to a variety of factors, including those listed in this table. Suggest how each of these factors could contribute to urbanisation.

Source: Australian Bureau of Statistics

Factor	Contribution to urbanisation
History of settlement	
Climatic patterns	
Transport routes	
Water supplies	
Economic factors	
Environmental amenity	

The process of urbanisation

Urban population as a % of total population				Urban population annual growth rate (%)	
	1970	1995	2015	1970–1995	1995–2015
Least developed	12.7	22.9	34.9	5.8	4.6
All developing	24.7	37.4	49.3	3.8	2.9
Industrialised	67.1	73.7	78.7	1.1	0.6

Source: UNDP

URBANISATION 2

- 6** What does the table on the previous page tell you?_____
- _____
- 7** By what percentage is the urban population expected to change between 1975 and 2015 in:
- a** least developed countries?_____
- b** all developing countries?_____
- c** industrialised (developed) countries?_____
- 8** What trends in urbanisation can you see in the table?
- _____
- _____
- 9** Suggest reasons for the differences between the three types of regions.
- _____
- _____
- 10** What might these trends mean for each type of region?
- _____
- _____

Rural-urban migration

Rural-urban migration is a major cause of urbanisation. It can be explained in terms of push and pull factors. Push factors cause people to leave rural areas. Pull factors attract people to urban areas.

- 11** What do you think the common push factors might be for people moving from rural to urban areas?
- _____
- _____
- 12** How would these factors be different in developing countries, compared to developed countries?
- _____
- _____

Push factor or pull factor?

- 13** Label each of these factors as 'push' or 'pull'.
- a** Famine_____
- b** Employment_____
- c** Better educational opportunities in a city_____
- d** Small farms being taken over by larger ones_____
- e** Opportunities for subsistence agriculture only_____
- 14** Describe the push and pull factors that could lead to urban-rural migration. Think about what the terms 'tree-change' and 'sea-change' mean.
- _____
- _____
- 15** Governments at all levels in Australia are encouraging people to reside outside of capital cities. What strategies do you think would be effective in achieving this?
- _____
- _____

URBANISATION 3

Important regional cities and populations in Australia.

You will need access to an atlas and other research materials to complete this task.

- 1
- Use the clues to help you name and locate the regional cities.
- 2
- Complete the rest of the table from your own knowledge and research.

Clue	Regional city and State	Grid reference	Best known for	Key industries and developments
I have the largest population of any non-capital city in Australia. My resident population is around 280 000, and I am a popular tourist destination. I am located in Queensland.				
I am a hot, inland city with a population of around 29 000. Indigenous Australians make up around 20% of my population. I am located about half way between Darwin and Adelaide.				
I am the second largest city in my state, with a population of around 70 000. By road, I am about 200 km from the state capital. I am located in the north of the smallest of all Australian states.				
I am Australia's seventh most populated city, with a population of around 275 000. I am the second largest city in my state. I am located around 170 km north of Australia's most populous city.				
I am the third largest city in the most populous state of Australia. My population is around 220 000. I am located about 85 km south of Sydney.				
I am a city famous for gold discovery in the mid-to-late 1800s. I am the third largest city in my state. I am located around 120 km from Melbourne.				
I am the second largest city in my state, with a population of around 55 000. I am located around 180 km south of the state capital. I am situated in the south-west of Western Australia.				
I am my state's second largest city, with a population of around 25 000. I am located around 25 km from my state's border with Victoria. I am famous for the Blue Lake.				

THE AGEING OF THE WORLD'S POPULATION 1

The world's population is ageing. This means that an increasing proportion of the total population is older than 60 years of age.

- 1 What do you think has contributed to the ageing of the world's population?
- _____
- _____
- _____

Effects of an ageing population

The ageing of the world's population has a range of economic and social implications for both developed and developing nations.

- 2 List possible economic and social implications in the table below.

Economic implications	Social implications

The roles of older people

- 3 a What roles do people aged 60 or more fulfill in society today? Consider their employment, spending power, family contributions and volunteer work.

- b How do you think these roles have changed over the past 50 years?

- 4 Write the correct term beside each definition: *life expectancy*, *fertility rate*, *developing countries*, *developed countries*.

- a The average number of children that women have _____

- b The average number of years a person born at a particular time is expected to live _____

- c The world's poorest countries _____

- d Countries which have high economic productivity, relatively high standards of living and relatively democratic systems of government _____

Why is the world's population ageing?

Life expectancy has increased and birth and fertility rates have decreased across the world.

- 5 Describe, using examples, how these factors lead to the ageing of the world's population.

According to the United Nations Department of Economic and Social Affairs, in 2007 the number of people aged 60 years or older globally was estimated to be 1.4 billion. By 2050 it is projected to reach 2 billion. One in 9 people is now aged 60 years or over. By 2050, it is projected to be one in 5. By 2150, one in 3.

THE AGEING OF THE WORLD'S POPULATION 2

In 2005, those aged 80+ years made up 13% of the population aged 60+ years. By 2050 it is projected that they will make up 19% of this group. Average life expectancy has increased 21 years since 1950. In 2005, average global life expectancy was 67 years. Average Australian life expectancy was 68 years in 1950, and 80 years in 2005.

6 How do you think life for a person aged 60 today differs from the life of a person aged 60 in 1950?

7 In general, for how long can a person born in the year 2050 expect to live for?

8 In general, how many children is a woman born in the year 2050 likely to have?

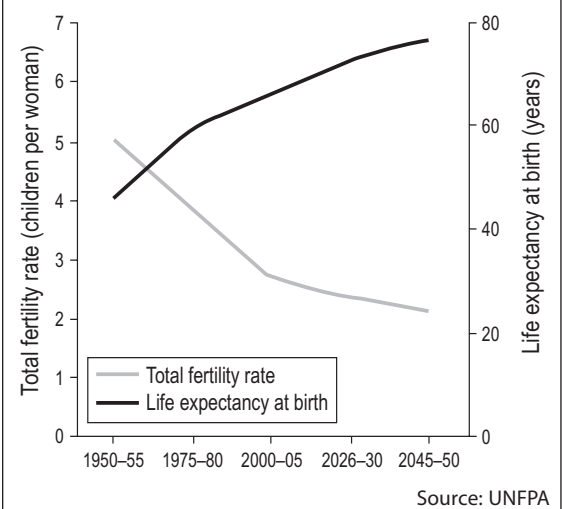

9 What is the expected decrease in the global fertility rate between 1950–55 and 2045–2050?

10 Suggest reasons for the expected decrease in the fertility rate. Consider contraception and the social and economic status of women.

11 What is the expected increase in life expectancy between 1950–55 and 2045–2050?_____

12 Suggest reasons for the expected increase in life expectancy. Consider nutrition, health and wealth.

Total fertility rate and life expectancy at birth, world, 1950–2050

Impacts of an ageing populations

An ageing population affects nations in many ways. More pressure is placed on welfare and health services. Older people are the largest users of health services. Providing residential aged care is very expensive.

13 Why do you think governments at all levels in Australia are increasing the focus on preventative medicine to ensure people stay healthier for longer?

14 Do all people aged 60+ years require expensive medical and health care, and welfare?_____

It is harder to measure the positive contributions of people aged 60+ years, especially when considering social contributions as well as economic.

15 What might social contributions include?_____

16 Why are social contributions difficult to measure?_____

17 If grandparents provide free care of grandchildren so that their children can work full-time, is that a social contribution or an economic contribution? How could this contribution be measured?

THE AGEING OF THE WORLD'S POPULATION 3

A changing age structure

This table shows how Australia's population and age structure changed between 1901 and 2006. The median age is the age which half the population is below, and half above.

Age distribution, Australia, 1901 and 2006

		1901	2006
Total population		3 773 800	19 855 300
Proportion of population in age group	0–14	35.2%	19.8%
	15–64	60.8%	66.9%
	65–84	3.9%	11.7%
	85+	0.1%	1.6%
Median age		22.5 yrs	37.0 yrs

Source: Australian Bureau of Statistics

- 1

Which group experienced the greatest percentage change over this period?
- 2

Which group experienced the smallest percentage change?
- 3

If these trends were to continue, what could the age structure look like in 2020?
- 4

Consider the factors that could change this structure over time, or dramatically. Think about historical events that have changed populations.
- 5

Describe how these factors would affect the ageing of Australia's population.

a

Increasing immigration for young people

b

Providing free child care

c

Increasing the age of retirement
- 6

For the following statement, present six points for and against which could be used in a debate. 'In the youth-obsessed culture of today, it is extremely difficult for older people to maintain their positions in the workforce – this sad fact robs the country of a wealth of skills and experience.'

For	Against

WORLD FOOD SUPPLIES 1

Food shortages

World food production has continued to expand during the last century to provide for a growing population. It is estimated that the world's population increased from about 1.5 billion people to more than 6.5 billion people over the last 100 years. Despite this, an estimated 850 million people still experience regular food shortages. (United Nations Food and Agricultural Organisation report, 2003)

- 1 Complete this diagram by listing causes of food shortages. Use colour to show which causes are human-made, which are naturally made, and which are both.

Food shortages do occur in the developed world, but are most severe in the developing world.

- 2 What do the terms 'developed world' and 'developing world' mean? Provide examples of each.

In places where subsistence and small-scale farming is widely carried out, droughts, floods and other natural disasters can cause millions of people to suffer food shortages.

- 3 a Define 'natural disaster'.
b List three places where this has occurred and describe the nature of the disaster.

- 4 Complete the following sentences using these words: *nations, famine, growth, starvation, access, health, sickness*.

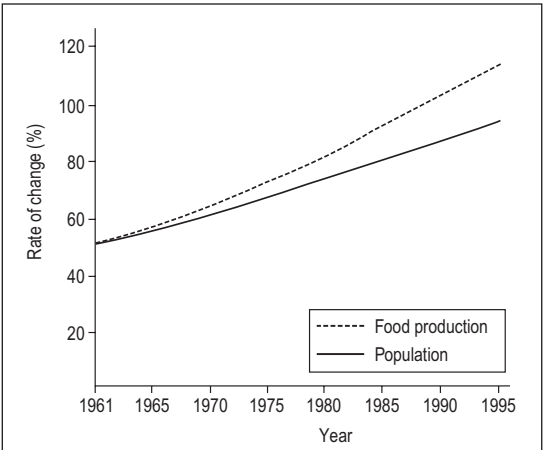

Food shortages can lead to _____,
which causes _____, impediments
to _____ and death.

People in developing _____ typically
have poorer _____ to nutrition and
_____ services, which increases the
likelihood of _____ and disease.

Population growth and food production

- 5 What trends in population growth and food production can you see in this graph?

Population and food production (rate of change index based on 1961 levels)

Source: FAO

WORLD FOOD SUPPLIES 2

- 6

What does this graph suggest about the distribution of food throughout the world?
- 7

Why can't food simply be distributed to the people who need it?
- 8

a

Where do you think greater population growth occurs – in developed or developing nations?

b

How does this contribute to the problems of food distribution and food shortages?

What the world eats

- 9

Complete the following sentences.

Sources of food are d_____ in the d_____ world and developing w_____.

This impacts on both food a_____ and l_____ of public nutrition.

The p_____ of developed nations have far wider food c_____ than those in developing n_____.
- 10

a

List the types of food you think are commonly eaten in developing nations.

b

How do you think these foods impact on health and levels of disease?
- 11

Describe how you think your diet compares with someone of a similar age in a developing country.

- 12

In your workbook, create two pie charts from the data in this table, then answer the following questions.

a

What do you think the 'other' group might include?

b

Describe the similarities and differences between the two pie charts.

c

What does this tell you about lifestyle in the developed and developing worlds?

d

Suggest health advantages and disadvantages that could be associated with the average diet in the developing world and in the developed world.

World food intake

Food type	Developed world %	Developing world %
Cereals	30.9	53.6
Roots and tubers	4.1	5.6
Sugar	12.8	7.5
Pulses – dry	0.9	2.3
Vegetable oils	13.9	10.7
Meat	10.2	6.6
Milk/dairy	8.7	2.8
Other	18.6	10.9

Source: FAO

WORLD FOOD SUPPLIES 3

World food supplies and shortages

Almost 850 million people go to bed hungry every night, the vast majority of them in Africa and Asia.

Since 1997, the number of chronically hungry has increased by 18 million.

The number of hungry people in developing nations is rising at a rate of almost 5 million a year.

11 million people in developed nations and 34 million in nations in transition are hungry.

At the UN World Food Summit in 1996, governments set a goal of reducing the number of hungry people by 50% by the year 2015.

‘Bluntly stated, the problem is not so much a lack of food as a lack of political will.’

Except when wars or natural disasters put a spotlight on developing countries, ‘little is said and less is done’ to end the plight of the 798 million people who suffer from chronic hunger.

FAO report 1996

What can be done about food shortages?

You have been elected as a special investigator for the United Nations. Your task is to present a 10-point plan to solve food shortages in Africa or Asia. In point form, describe what has to be done immediately to work towards solving this world problem. (Hint: consider human and environmental factors as well as emerging technologies.)

GLOBAL PATTERNS IN FISHING 1

Fishing for human consumption

Fish and seafood products have long been an important source of food for human populations. Increasing demand from population growth, combined with degradation of fish habitats, is placing this resource under increasing stress. Fish, crustaceans and molluscs provide approximately 16% of the human population's animal protein intake.

- 1 List the types of protein you eat. _____
- 2 What types of crustaceans and molluscs are common food sources?

- 3 What other sources of protein are commonly included in the human diet?

Fishing for human consumption

- 4 What does 'per capita' mean?

- 5 Why are per capita figures included as well as the total figures?

- 6 What does the data tell you about Australia's fish food consumption, compared to other regions?

- 7 Calculate the world's total fish food supply.

- 8 Calculate the world average per capita fish food supply.

- 9 Why is China listed separately from the other Asian nations?

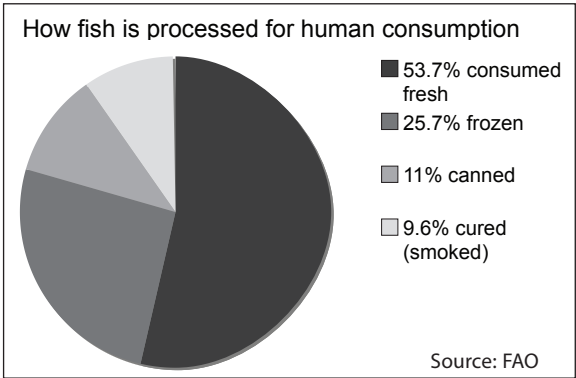

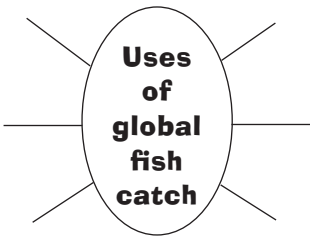

Total and per capita fish food supply, 2000

Region	Fish food supply	
	Total (million metric tonnes)	Per capita (kg/pa)
Africa	6.2	8.0
North & Central America	8.1	16.8
South America	2.9	8.5
China	31.2	25.1
Other Asia	32.5	13.7
Europe	13.9	19.1
Oceania	0.7	22.5

Source: FAO

How fish products are used

- 10 Around 29% of the global fish catch is used for purposes other than human consumption. What do you think these other purposes are?
Complete this diagram to show your ideas.
- Fish is a highly perishable product. The graph below right shows how the 71% that is consumed by humans is processed.
- 11 Describe what this pie chart shows, using these words: *majority, common, most, least, percentage, amount.*

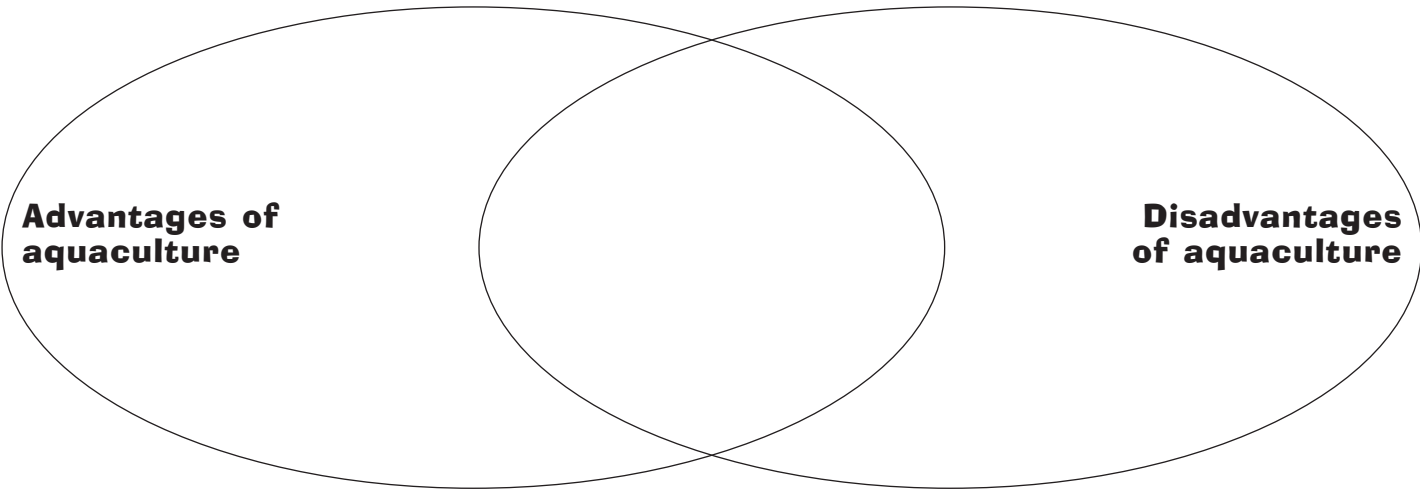

GLOBAL PATTERNS IN FISHING 2

Aquaculture

Not all of the world's fish catch comes from the wild. Aquaculture (fish farming) is commonly practised in many parts of the world.

12 What do you think the advantages and disadvantages of aquaculture might be? Use this Venn diagram to organise your ideas.

Impacts on fishing

A continuing supply of fish is dependent on our management of the environment. It also depends on natural ecosystem change and the regulation of the fishing industry. Of the world's 15 major fishing regions, the United Nations states that four are already depleted and another nine are declining.

13 Complete the sentences using these words: *quickly, environment, stocks, habitats, commercial*.

Unchecked, _____ fishing practices can be detrimental to the _____ and to the long-term future of the industry.

Destruction of aquatic _____ and overfishing can reduce available fish _____ dramatically and _____.

14 Write each of these actions beside the correct effect: *catch quotas, bottom trawling, use of driftnets, dam building on coastal rivers, water pollution, overfishing, wetland depletion*.

Action	Effect
	Reduces fish stocks due to loss of the nursery areas that protect young fish on shallow coastlines and estuaries
	Catching of unwanted fish species and other marine creatures, leading to reduced ocean biodiversity
	Destruction of fish habitats and therefore food sources and protection areas for fish in shallow fishing grounds
	Reduces the stock of fish available for breeding, leading to a species becoming threatened, endangered or extinct
	In fish populations, causes death, disease, abnormalities and reduced ability to reproduce
	Interrupts the breeding cycles for ocean species that spawn in fresh water, such as salmon
	A measure designed to prevent or reduce overfishing, with limited success due to global cooperation and enforcement difficulties

GLOBAL PATTERNS IN FISHING 3

Commercial whaling

Commercial whaling – the harvesting of whales, mostly for meat – is carried out by a number of countries. Australia is one of many nations opposed to commercial whaling. Commercial whaling is regulated by the International Whaling Commission (IWC). The IWC is responsible for protecting whales around the world. Whaling has been practised for centuries in some parts of the world. It is considered an integral part of some traditional cultures in places such as Greenland and Alaska. Today, whaling is a highly controversial practice. Many countries are against it on environmental grounds – a number of whale species are threatened and their populations continue to decline.

Conservation groups and other non-government organisations protest at many levels about commercial whaling – from political lobbying to physically preventing whaling activities at sea.

As the number of whales has decreased over the years, the whaling industry has changed to new locations, new target species and new harvesting techniques.

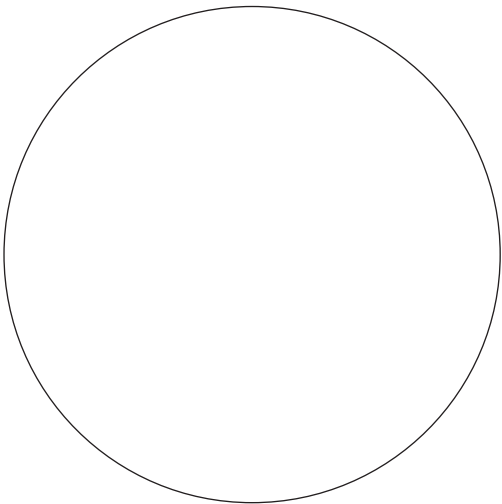

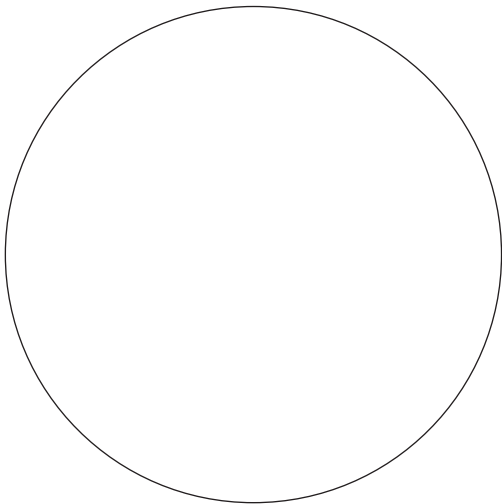

The move by many nations to protect the whales in their waters is relatively recent. The benefits of protection are both environmental and economic – many argue that whale-watching tourism is more profitable than commercial whaling. Even though the IWC exists to regulate whaling and protect whales, it is limited as a governing body. Nations do not have to belong to it, and therefore are not bound by its rulings on the industry – such as the introduction of quotas.

Commercial whaling – research

To answer the following, try searching the Internet with these key terms: *Greenpeace, International Whaling Commission, whale harvesting, whale species, Department of the Environment and Water Resources*.

- 1 Find data to answer each of the following questions, and present your findings as pie charts. Remember to label the pie charts correctly.
- a Which species of whales are mostly harvested?

b Which species of whales are threatened or endangered?

Answer the following questions in your workbook.

- 2 Which countries currently harvest whales, and for what purposes?
- 3 Investigate how the Australian government is involved in the IWC and describe the strategies it is using to protect whales.
- 4 If you were responsible for determining the future of the whaling industry, what would you do and how would you achieve this?

SELECTED ANSWERS

Population change and growth

Worksheets 1–2

- 1** Low economic development is linked to poor nutrition, health, and medical services such as contraception
- 2** As the economy improves, better medical facilities reduce the death rate
- 3** Birth rates fall with improved education and medical services such as contraception, leading to a stable population level
- 4** Demography
 - b** Median age
 - c** Fertility
 - d** Natural increase
 - e** Distribution
 - f** Net migration
- 5a** Rates, death, natural, population
- b** Exceeds, increase
- c** Death, birth, population
- 6** Answers may include war, contraception, paid maternity leave, access to medical facilities and treatment, natural disasters such as disease epidemics, tsunamis, heat waves
- 7** Teacher to check. Encourage students to consider factors affecting both the people moving and the countries they would like to move to and from
- 8a** Pull factors is correct
- b** Push factors is correct
- 9** Pull: employment opportunities, desire to live by the coast, opportunities for better education
Push: conflict or war, severe drought, lack of available work

Worksheet 3

- 1** Teacher to check
- 2** Population change is gradually decreasing in both regions, however in more developed regions, population reaches negative growth
- 3** Answer may include state of

the economy, access to medical facilities including contraception, education

- 4** In both regions, the ratio of older people to younger people will increase

5–6 Teacher to check

Urbanisation

Worksheets 1–2

- 1** Sample answer: Urbanisation is the process by which an increasing proportion of the population lives in towns and cities, rather than in rural areas
- 2–5** Teacher to check
- 6** Urban population and urban population growth rates for least developed, all developing and industrialised countries, 1970–1995 and projections for 1995–2015
 - 7a** –1.2
 - b** –0.9
 - c** –0.5
- 8** For all regions, rate of urbanisation is slowly decreasing. The less developed the region, the higher the rate or urbanisation
- 9** Teacher to check, encourage students to consider the state of the economies, and the viability of agriculture
- 10** Teacher to check
- 11** Answers may include employment prospects, access to facilities in the areas of health, education and entertainment
- 12** Teacher to check
- 13a** Push
- b** Pull
- c** Pull
- d** Push
- e** Push
- 14** Answer may include lifestyle choices, cheaper living, slower, more peaceful pace of life, space and the natural environment
- 15** Teacher to check

Worksheet 3

- 1** (In table order) Gold Coast City, Alice Springs, Launceston, Newcastle, Wollongong, Ballarat, Bunbury, Mount Gambier

The Ageing of the World's Population

Worksheets 1–2

- 1** Increasing life expectancy, reduced death rates and birth rates
- 2–3** Teacher to check
- 4a** Fertility rate
- b** Life expectancy
- c** Developing countries
- d** Developed countries
- 5** Increase in life expectancy due to better health, better nutrition and better medical facilities. Decrease in fertility rates due to better access to contraception and the changing social and economic status of women
- 6** Teacher to check. Encourage students to consider the issues of health, life expectancy and wealth
- 7** About 78 years
- 8** 2
- 9** By 2.9 children
- 10** Teacher to check
- 11** 32 years
- 12** Teacher to check
- 13** Improves quality of life, reduces health care costs, increases likelihood of people remaining employed for longer
- 14** No
- 15** Teacher to check
- 16** Because they can't be measured quantitatively, i.e. with numbers

Worksheet 3

- 1** 85+ group
- 2** 15–64 group
- 3** There would be a smaller percentage in the 0–14 age groups, and higher percentages in the other groups

SELECTED ANSWERS (cont'd)

- 4** Answers could include war or conflict, disease epidemics, scientific developments, significant economy change, climate change, significant political change
- 5a** Increase in the 0–14 and 15–64 age groups
- b** Increase in birth rates, 0–14 age group
- c** May contribute to the economy, with people remaining in work for longer, which may improve health and reduce death rates, and may reduce birth rates if grandparents are no longer available to provide free care of grandchildren
- 6** Teacher to check

World food supplies

Worksheets 1–2

- 1** Answers may include diseases in crops or stock, drought, economic collapse, war/conflict, floods, tsunamis, pollution, salinity, desertification
- 2** Developed world – Countries with developed economies and good standards of living for most occupants, e.g. Australia, UK
Developing countries – countries with a much lower standard of living than developed countries, e.g. Ethiopia, Zimbabwe
- 3a** The consequence of a natural hazard that drastically affects human activities
- b** Answer could include:
-Katrina, USA, hurricane
-Tsunami, Sumatra Indonesia, Indian Ocean earthquake
-Limpopo River, Mozambique, flood
- 4** (In order) famine, starvation, growth, nations, access, health, sickness
- 5** Both are increasing, food production at a faster rate than population

- 6** The distribution of food around the world is not equal, because more food is produced than the world population needs, yet many people still experience food shortages. Therefore some people have more food than they need, while others do not have enough food
- 7** Teacher to check
- 8a** Developing nations
- b** If a particular country is already experiencing food shortages, an increasing population will make the situation worse
- 9** (In order) different, developed, world, availability, levels, populations, choices, nations
- 10** Teacher to check. Inadequate nutrition may decrease levels of health and increase incidence of sickness and disease
- 11** Teacher to check. Encourage students to consider the range of food choices available
- 12** Teacher to check

Worksheet 3

Teacher to check

Global Patterns in Fishing

Worksheets 1–2

- 1** Generally meat and eggs provide the highest sources of protein
- 2** Lobster, crayfish, yabbies, oysters, octopus, squid, clams
- 3** Teacher to check
- 4** for each person
- 5** To show the differences in per capita consumption and total supply
- 6** Consumption is much higher than in most other countries
- 7** 95.5 million metric tonnes
- 8** 16.2 kg/pa per capita
- 9** If China was included with the other figures for Asia, it would not give a true indication of China's significant fish consumption

- 10** Answers could include soil fertiliser, pet food, oil, herbal medicines
- 11** Teacher to check
- 12** Advantages could include:
Preservation and regeneration of natural fish stocks
Elimination of wasteful by-catch
No need for habitat-destroying fishing methods (e.g. bottom trawling)
Delivers more regular supply
No dependence on natural conditions (e.g. weather, presence of fish in certain areas)
Disadvantages could include:
Many farmed species need aquatic food that has to be caught
Pollution of ocean waters from coastal fish farms
Risk of 'crop' failure from disease and other problems
Infrastructure costs
- 13** (In order) commercial, environment, habitats, stocks, quickly
- 14** (In order) wetland depletion, use of driftnets, bottom trawling, overfishing, water pollution, dam building on coastal rivers, catch quotas

Worksheet 3

- 1a** Minke Whale, Short-finned Whale, Pygmy Killer Whale, Spinner Dolphin, Brde's Whale, Sei Whale, Sperm Whale, Finback/Fin Whale
- b** North Atlantic Right Whale, North Pacific Right Whale, Humpback Whale, Sei Whale, Finback/Fin Whale, Blue Whale, Western Pacific Gray Whale

Instant Lessons PowerPoint – Geography

Quality ready-to-use resources

Teach with a simple-to-use technology product featuring fully-illustrated slide sets and student worksheets that present curriculum in an engaging and interactive manner. Use the Geography PowerPoint series to supplement your existing resources, to introduce new topics or for revision and assessment purposes. This is a time-saving and easy-to-use resource with no additional preparation required.

This checklist highlights the major uses and benefits of these products.

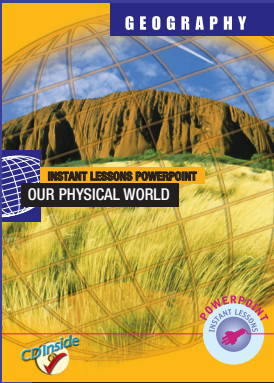

Key features			
Fully integrated slide and worksheet units that include extension tasks	✓	Teacher's notes and curriculum links	✓
Animated diagrams and full-colour illustrations	✓	Worksheet tasks and assessments in hard copy and on CD	✓
Key definitions and concepts are explained and illustrated	✓	Suitable for Windows and Mac users	✓

People and Resources – a Global View

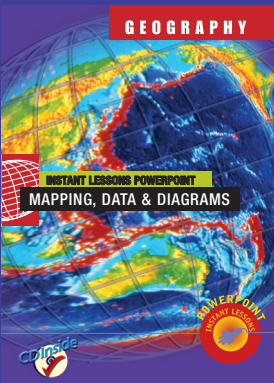

This title of five slide sets and the accompanying notes and worksheets examine issues to do with population change, and how growth is generally having a negative impact – both on human access to natural resources and their future supply. Topics examined include the factors that influence population change; population predictions for the year 2050; why the world's population is ageing; the causes and impacts of urbanisation; problems with feeding the world's people; the importance of sea foods to human society; threats to this industry and the controversy over whale harvesting. Australia and world statistics are provided for student analysis.
